The unique advantages of the TriProVita system

Dear Reader

For more than 50 years, Anita care has specialised in breast forms with an anatomically-perfected shape and ideal fit. Everything is taken care of in house, from the first draft to production. The entire product range includes breast forms, special bras and swimwear, and imparts a high degree of naturalness, enabling women to feel confident and enjoy a good quality of life.

Tested and certified

- Tested for correct function and quality in clinical trials and studies by an independent and certified test institute
- Certified as medical aids, approved and listed with a medical aid number
- Made of silicone, microfibre and film which has been dermatologically-tested and certified to the latest international biocompatibility standard to DIN ISO 10993

Advantages of the Anita care silicone breast forms

- An outstanding product is the lightweight breast form sold under the SoftLite brand name, a combination of pleasant softness and naturalness with the advantage of a lower weight of up to 42% in comparison to silicone gel for breast forms with full weight compensation.
- Excellent skin and body compatibility
- Fast adaptation to the body temperature
- Weight, softness, natural movement and shape retention similar to the natural breast
- Long lifetime

The TriProVita system from Anita Care: Special bras, swimwear and breast forms. Together, these three ranges form the TriProVita system. All models are developed by Anita Dr. Helbig GmbH and mostly manufactured in our own plants. All products are coordinated, leaving you feeling happy and confident while ensuring the highest quality standards.

We guarantee all-round care from a single source, leaving your customer feeling confident and comfortable

Breast Forms Range Overview

Product ranges	Product description
Initial	Textile lightweight breast forms for post-op use Gentle and lightweight post-op breast forms to protect sensitive skin.
Partial	Silicone breast forms for partial compensation Our partial breast forms are used to perfectly smooth small irregularities after lumpectomies. The different forms combined with individual filling options ensure natural concealment and a perfect fit.
Light & Soft	SoftLite silicone breast forms with or without movement fold (up to 35% lighter) SoftLite silicone breast forms with movement fold (up to 42% lighter) The unique technology of our patented FlexGap system ensures natural movement. When the wearer is reclining it allows the breast form to flatten in the same way - just like the natural breast.
Light & Cool	Silicone breast forms with breathable microfibre technology (up to 25% lighter) Anita care is the only manufacturer in the world that produces silicone breast forms with breathable, textile microfibre backing. This fabric demonstrates excellent skin compatibility. The breast form can be filled as required with medical fleece. Size and cup can be adjusted without any change in weight.
Light & Vario Adhesive	Variable silicone breast forms (up to 42% lighter) The Vario system ensures perfect support when wearing a breast form. Valance Vario can be worn directly next to the body or in your Anita care bra.
Light & Active	Silicone breast forms with ribbed design for pleasant skin milieu (up to 25% lighter) Ideal for swimming. With the ribbed backing the water can flow away very quickly. The air chambers regulate the skin milieu.
Standard & Soft	Silicone breast forms with full weight compensation
