Trimble R12i GNSS SYSTEM

KEY FEATURES

- Trimble[®] Inertial Platform[™] (TIP) technology. Calibration-free and magnetically immune IMU-based tilt compensation for topo measurements and stakeout.
- ► Trimble ProPoint[™] GNSS positioning engine. Engineered for improved accuracy and productivity in challenging GNSS conditions.
- 672-channel solution with Trimble 360 satellite tracking technology
- CenterPoint[®] RTX correction service delivers fast, RTK level accuracy worldwide via satellite/IP
- Trimble xFill[®] correction outage technology
- ▶ Optimized for Trimble Access[™] field software
- ► Android[™] and iOS platform support
- Cellular, Bluetooth[®], Wi-Fi data connectivity
- Military-spec rugged design and IP-67 rating
- Ergonomic form factor
- > All day battery with built-in status indicator
- ► 6 GB internal memory

Tilt Compensation

PERFORMANCE SPECIFICAT	10113	
GNSS MEASUREMENTS		
		ositioning in challenging environments ¹ and inertial measurement
	integration with Trimble ProPoint GNSS technology. Increased measurement and stakeout productivity and tra	ceability with Trimble TIP™ technology IMI I-based
	tilt compensation	ceability with minible mill technology into-based
	Advanced Trimble Custom Survey GNSS chips with 672 ch	annels
	Reduced downtime due to loss of radio signal or cellular co	
	Signals tracked simultaneously	GPS: L1C, L1C/A, L2C, L2E, L5
	Signals tracked simultaneously	GLONASS: L1C/A, L2C/A, L2P, L3 SBAS (WAAS, EGNOS, GAGAN, MSAS): L1C/A, L5 Galileo: E1, E5A, E5B, E5 AtBOC, E6 ² BeiDou: B1, B1C, B2, B2A, B2B, B3 QZSS: L1C/A, L1S, L1C, L2C, L5, L6 NavIC (IRNSS): L5 L-band: Trimble RTX™ Corrections
	Iridium filtering above 1616 MHz allows antenna to be used	up to 20 m away from iridium transmitter
	Japanese LTE filtering below 1510 MHz allows antenna to b	e used up to 100 m away from Japanese LTE cell tower
	Digital Signal Processor (DSP) techniques to detect and re-	cover from spoofed GNSS signals
		M) algorithm to detect and reject problem satellite measurement
	to improve position quality Improved protection from erroneous ephemeris data	
	Positioning Rates	1 Hz, 2 Hz, 5 Hz, 10 Hz, and 20 Hz
POSITIONING PERFORMANC		
STATIC GNSS SURVEYING		
High-Precision Static	Horizontal	3 mm + 0.1 ppm RMS
	Vertical	3.5 mm + 0.4 ppm RMS
Static and Fast Static		
	Horizontal	3 mm + 0.5 ppm RMS
	Vertical	5 mm + 0.5 ppm RMS
REAL TIME KINEMATIC SURVEYI	NG	
Single Baseline <30 km		
	Horizontal	8 mm + 1 ppm RMS
	Vertical	15 mm + 1 ppm RMS
Network RTK ⁴		
Network RTK [*]	Horizontal	8 mm + 0.5 ppm RMS
	Vertical	15 mm + 0.5 ppm RMS
RTK start-up time for specified precisions⁵		2 to 8 seconds
TRIMBLE INERTIAL PLATFORM (1	TIP) TECHNOLOGY	
TIP Compensated Surveying ⁶		
The Compensated Surveying	Horizontal	$PTK \pm 5 mm \pm 0.4 mm/^{\circ}$ tilt (up to 20°) PMS
		RTK + 5 mm + 0.4 mm/° tilt (up to 30°) RMS
	Horizontal	RTX + 5 mm + 0.4 mm/° tilt (up to 30°) RMS
IMU Integrity Monitor	Bias monitoring	Temperature, age and shock
TRIMBLE RTX CORRECTION SER	VICES	
CenterPoint RTX ⁷		
	Horizontal	2 cm RMS
	Vertical	5 cm RMS
	RTX convergence time for specified precisions in Trimble RTX Fast regions	<1min
	RTX convergence time for specified precisions in non RTX Fast regions	< 15 min
	RTX QuickStart convergence time for specified precisions	<1 min
TRIMBLE xFILL ⁸		
	Horizontal	RTK ⁹ + 10 mm/minute RMS
	Vertical	RTK ⁹ + 20 mm/minute RMS
TRIMBLE xFILL PREMIUM ⁸		
	Horizontal	3 cm RMS
	Vertical	7 cm RMS
CODE DIFFERENTIAL GNSS POSI		
	Horizontal	0.25 m + 1 ppm RMS
	Vertical	0.50 m + 1 ppm RMS
	SBAS ¹⁰	typically <5 m 3DRMS

Trimble.

Trimble R12i GNSS SYSTEM

- 1 Challenging GNSS environments are locations where the receiver has sufficient satellite availability to achieve
- Challenging GNSS environments are locations where the receiver has sufficient satellite availability to achieve minimum accuracy requirements, but where the signal may be partly obstructed by and/or reflected off of trees, buildings, and other objects. Actual results may vary based on user's geographic location and atmospheric activity, scintillation levels, GNSS constellation health and availability, and level of multipath and signal occlusion. The current capability in the receivers is based on publicly available information. As such, Trimble cannot guarantee that these receivers will be fully compatible with a future generation of Galieo satellites or signals. Precision and reliability may be subject to anomalies due to multipath, obstructions, satellite geometry, and atmospheric conditions. The specifications stated recommend the use of stable mounts in an open sky view, EMI and multipath clean environment, optimal GNSS constellation configurations, along with the use of survey practices that are generally accepted for performing the highest-order surveys for the applicable application including occupation times appropriate for baseline length. Baselines longer than 30 km require precise ephemeris and occupation up to 24 hours may be required to achieve the high precision static specification. Network RTK PPM values are referenced to the closest physical base station. May be affected by atmospheric conditions, signal multipath, obstructions and satellite geometry. Initialization reliability is continuously monitored to ensure highest quality. TIP references the overall positioning error estimate at the tip of the surveying pole throughout the tilt compensation factors that affect GNSS solution quality. The 5 mm constant error component accounts for residual misalignment between the vertical axes of the receiver and the built-in Inertial Measurement Unit (IMU) after factory calibration, assuming the receiver is mounted on a standard 2 m carbon fiber range pole which is properly calibration,
- 5
- 6 assuming the receiver is mounted on a standard 2 m carbon fiber range pole which is properly calibrated and free from physical defects. The till-dependent error component is a function of the quality of the computed tilt azimuth, which is assumed here to be aligned using optimal (SNSS conditions. RMS performance based on repeatable in field measurements. Achievable accuracy and initialization time may
- vary based on type and capability of receiver and antenna, user's geographic location and atmospheric activity, scintillation levels, GNSS constellation health and availability and level of multipath including obstructions such as large trees and buildings.
- Accuracies are dependent on GNSS satellite availability. xFill positioning without an xFill Premium subscription 8 ends after 5 minutes of radio downtime. xFill Premium will continue beyond 5 minutes providing the solution has converged, with typical precisions not exceeding 3 cm horizontal, 7 cm vertical. xFill is not available in all regions, check with your local sales representative for more information.

- 9 RTK refers to the last reported precision before the correction source was lost and xFill started.
 10 Depends on SBAS system performance.
 11 Receiver will operate normally to -40 °C, internal batteries are rated from -20 °C to +60 °C (ambient +50 °C).
 12 Tracking GPS, GLONASS and SBAS satellites.

- 12 tracking u+5, GLUNASS and SBAS satellites.
 13 Varies with temperature and wireless data rate. When using a receiver and internal radio in the transmit mode, it is recommended that an external 6 Ah or higher battery is used.
 14 Varies with terrain and operating conditions.
 15 Due to local regulations, the integrated cellular modem cannot be enabled in China, Taiwan, or Brazil. A Trimble controller integrated cellular modem or external cellular modem can be used to obtain GNSS corrections via an IP (Internet Protocol) connection. 16 Bluetooth type approvals are country specific
