5. DESCRIPTION OF STUDY SUBJECTS

The study subjects (25 people) were healthy, with negative history of allergy. General inclusion criteria for the selection of study subjects were the following: healthy men and women over 18 years old, phototype: I-IV on Fitzpatrick scale, Caucasians, skin without irritations and changes requiring pharmacological treatment. General exclusion criteria were the following: volunteers who at the time used any treatment on the skin area subject to the study, volunteers exhibiting or having a known history of acute or chronic dermatological, medical and/or physical conditions that could influence the outcome of the study, pregnant or breastfeeding women or women planning a pregnancy during the study. None of the study subjects reported documented oversensitivity or history of adverse reactions to individual ingredients of the product tested. All the study subjects fulfilled the requirements of inclusion for tests and signed the Informed Consent Form (ICF). Additionally, they were informed on the purpose, methodology of the study and possible adverse effects. The skin at the application area (arms or interscapular area) was healthy, without lesions. The study subjects were advised to exercise caution in handling the applied contact tests.

6. TESTING METHODOLOGY

The preparation in the appropriate concentration was applied onto the skin on the forearm in the area of 3x3 cm. The reading of skin response was performed 15 minutes, 30 minutes, 1 hour, and 24 hours after the test application. Simultaneously, to assure the objectivity of the results of the study and in order to exclude possible reading errors connected with dermal irritations one sample control (control sample with water) was carried out. The results of the study are presented in section 10 of this report. If irritations appeared or persisted 24h after the application, an additional examination took place after 48 hours. Determining the response of the skin, the dermatologist assessed the irritating and sensitising effects of the tested product. The study results might have been influenced by factors such as lifestyle, stress, diet and environmental conditions, etc.

10. CALCULATED VALUES

The following calculated values present the sum of negative reaction (erythema and edema) defined as Average Irritation Index (X_{av}).

| | Evaluation after 15 minutes of product application | Evaluation after 30 minutes of product application | Evaluation after 1 hour of product application | Evaluation after 24 hours of product application | Evaluation after 48 hours of product application |
|--|--|--|---|---|---|
| The sum of negative reaction (the sum of classification points) | 0,00 | 0,00 | 0,00 | 0,00 | Examination skipped |
| X_{av} | 0,00 | | | | |

11. INTERPRETATION

The average irritation index (X_{av}) was calculated. The product was then classified according to the following table:

| Average irritation index (x_{av}) | Class |
|---------------------------------------|-----------------------|
| $X_{av} < 0.50$ | Not irritating |
| $0.50 \leq X_{av} < 2.00$ | Slightly irritating |
| $2.00 \leq X_{av} < 5.00$ | Moderately irritating |
| $5.00 \leq X_{av}$ | Highly irritating |
