EXPERTISE

Reduced virucidal efficacy of **Akaspray** in the quantitative suspension test.

We tested the surface disinfectant **Akaspray** from Dr. Kilic Akadia Chemie according to the guideline of the Deutschen Vereinigung zur Bekämpfung der Viruskrankheiten (DVV) e. V. and the Robert-Koch-Institutes (RKI).

The test were done with BVDV strain NADL (Bovine Viral Diarrhoe Virus) and with Vaccinia Virus strain Elstree (test report B 14739b of 2008-10-22).

After an exposure of 30sec with the 80% **Akaspray** without loading and with loading (10% fetal calf serum) no replication of the test strain was detected.

Therefore a reduced virucidal efficacy of the concentrate within 30 seconds was demonstrated.

A handwritten signature in black ink, consisting of a stylized 'W' and 'P'.
