YÜKSEK KONSANTRASYONLU OKSİJEN MASKESİ, GENİŞ (High Concentration Oxygen Mask, Elongated)

Ürün Tanımı (Product Information)

High Concentration Oxygen Mask is a soft, transparent, non-sterile and disposable product made of biocompatible PVC. The rubber and nose clip on it allow the mask to be worn comfortably on the face. The connecting tube between the mask and the reservoir is unidirectional. This connecting tube has a valve that prevents gas from entering the reservoir bag from the mask during expiration; therefore, the breath given by the patient does not go to the bag. Only oxygen goes from the bag to the patient. In addition, there are valves on both sides of the mask. These flaps prevent the entry of room air during inspiration and open during expiration, allowing air in the mask to escape. It consists of the parts defined below;

- * Mask: It is made of medical grade PVC. It is compatible with the facial features and is ergonomic. There is a mask wire that adapts to the contours of the face and a rubber that provides grip to the face. An under-chin design is available to fit the face size.
- * Hose: It is a 200cm connection hose made of PVC, channeled, resistant to breakage and bending.
- * Connector: Made of PVC, compatible with the product. There are 2 connectors. It is attached to both ends of the hose with adhesive.
- * Adapter: It is high density polyethylene material in white color. By connecting the connector to the plug, the mask connection of the hose is provided. The patient can rotate according to his position.
- * Reservoir: Made of white, medical grade PVC. Highly concentrated oxygen fills the reservoir.
- * Silicone Valve: It is white colored, silicone material. Thanks to the silicone valves, the pure oxygen in the reservoir is taken by the patient.

Kullanım Amacı (Intended Use)

With its design suitable for facial anatomy, it provides oxygen to the patient with a mask. Pure (High concentration oxygen) fills into the reservoir. Thanks to the silicone valves in the mask, high concentration oxygen is taken by the patient. Oxygen escape is prevented by silicon valves.

OKSİJEN MASKESİ (Oxygen Mask)

Ürün Tanımı (Product Information)

Oxygen Mask is a soft, transparent, latex-free (phtalate free), non-sterile or sterile and disposable product made of biocompatible PVC. The rubber and nose clip on it allow the mask to be worn comfortably on the face. It is used in short-term oxygen therapy. It is transparent so that it is easier to monitor the patient's lip color and vomiting. The holes on both sides allow excess gases to escape, especially during exhalation. It consists of the parts defined below;

- * Mask: It is made of medical grade PVC. It is compatible with the facial features and is ergonomic. There is a mask wire that adapts to the contours of the face and a rubber that provides grip to the face.
- * Hose: It is a 250cm connection hose made of PVC, channeled, resistant to breakage and bending.
- * Connector: Made of PVC, compatible with the product. There are 2 connectors. It is attached to both ends of the hose with adhesive.
- * Adapter: It is high density polyethylene material in white color. By connecting the connector to the plug, the mask connection of the hose is provided.

Kullanım Amacı (Intended Use)

It is used for oxygenation and ventilation of the lungs of the patient or injured, arranged to include the mouth and nose with its design in accordance with the facial anatomy.

OKSİJEN MASKELİ NEBULİZER SET (Nebulizer Set with Oxygen Mask)

Ürün Tanımı (Product Information)

Oxygen Mask Nebulizer Set is a biocompatible, non-sterile, disposable product which finishes 3ml medicine in 10 minutes and have 2 micron partical size. It consists of the parts defined below;

* Mask: It is made of medical grade PVC. It is compatible with the facial features and is ergonomic. There is a mask wire that adapts to the contours of the face and a rubber that provides grip to the face.

* Hose: It is a 210cm connection hose made of PVC, channeled, resistant to breakage and bending.

* Connector: Made of PVC, compatible with the product. There are 2 connectors. It is attached to both ends of the hose with adhesive.

* Nebulizer Chamber: It consists of 3 parts;

- Chamber Cover: It is polypropylene material in white color.

-House spacer: It is polystyrene material in blue color.

-House: It is transparent, polystyrene material. 10ml drug capacity.

Kullanım Amacı (Intended Use)

With its design suitable for facial anatomy, it provides oxygen and/or medication to the patient with a mask.
