

Mollelast®

Elastic conforming bandage

For all types of retention bandages

Comfortable and elastic textured surface for all types of retention: Mollelast can be applied without bunching and retains dressings reliably without constriction, especially on tapered parts of the body and joints. Elastic retention bandages are used primarily for the

retention of wound dressings and bandages. This product can also be used for mild compression, primarily for finger and toe bandages in lymphology. Because of the special knitting technique, this bandage has lateral stability, is air-permeable, lies loosely in the hand and is comfortable to wear.

Fields of application

- to immobilize the limbs
- to retain dressings
- for compression

Recommended combinations

to retain plaster of Paris and synthetic splints, e.g. Cellacast Splint

To note

- sterilizable by steam (134°C)

Properties

- lengthwise stretch (approx. 100%)
- breathable and textured
- can be applied without bunching
- reliable retention even on tapered parts of the body and joints
- has selvages
- white

Product composition

56% viscose, 44% polyamide.

People.Health.Care.
