TO WHOM IT MAY CONCERN

We, **HELAMIN TECHNOLOGY HOLDING SA**, 5 Chemin du Pavillon, 1218 Le Grand-Saconnex, Switzerland, hereby certify that:

Corrosion inhibitors and anti-scaling agents Helamin **906 H C4** is **produced** by **Helamin France Sarl**, the production facility of the Helamin group, by order of CPL GmbH under their company's brand name **Acrisolon 336**.

This product has the same characteristics as the one that was supplied in 2023, except pH which is not less than 13 and increased content of amines according new demands.

This is to reconfirm that our Helamin 906 H technology has a very long experience of successful applications in power plants worldwide, and especially in CIS countries where our products have been used for up to 20 years without any interruption.

This is to remind as well that Helamin reagent is providing its best efficiency whenever being dosed **after** de-aerator as indicated in "Recommended dosing criteria" of our TDS and based on common rules of physics and chemistry: "pumped into the feed water after thermal de-aerator", even though this is not obligatory.

We confirm our readiness to participate online in testing a reagent (corrosion inhibitor) for the company's power equipment and modify the chemical composition of the reagent (amines) depending on the results obtained during testing.

The validity, interpretation and performance of this letter shall be governed by the laws of Switzerland, Geneva.

Le Grand-Saconnex, June 19th, 2024.
