## Clarification Regarding Optional Accessories

### SD Card for Data Storage

The SD card used for data storage is not a primary standard accessory and does not affect the ECG device's measurement capabilities. It is an optional accessory, which may be supplied according to the customer's request in capacities of 2 GB, 8 GB, 16 GB, or 32 GB. SD cards are not manufactured by the EDAN INSTRUMENTS, INC and are instead outsourced from third-party suppliers. Since the SD card is a commonly requested accessory, an internal reference number (01.17.052452) has been assigned to it. This reference has been included in the updated User Manual dated December 15, 2025. (The relevant document is attached for reference.)

### Carrying Bag for Transportation

The carrying bag is not included among the primary standard accessories that influence the ECG device's measurement capabilities and is not related to the components used to perform ECG measurements (such as ECG cables or electrodes). It is an optional accessory, which is not manufactured by the EDAN INSTRUMENTS, INC and is outsourced from third-party suppliers.

Due to the very rare requests for a carrying bag from the Clients of EDAN INSTRUMENTS, INC, this accessory has not been included in the User Manual. However, it has been assigned an internal reference number (01.56.466325) to enable ordering and warehouse release through EDAN INSTRUMENTS, INC.

The offered carrying bag procured from external suppliers specifically for our partner's requests for the purchasing procedure ocds-b3wdp1-MD-1770148556440 - is fully compatible with and suitable for the safe transportation of the SE-301 ECG device with its accessories. (The relevant document is attached for reference.)

Yours faithfully,

Alvin Liang
