Device Classification:

- As per "Classification Criteria" in Annexure VIII of Regulation (EU) 2017/745, the family of IV Cannula is normally intended for continuous use for more than 60 minutes and less than 30 days. Hence these are for short-term use as per description in the 1.2 of Annexure VIII.
- An IV Cannula penetrates inside the surface of body, hence is "Invasive device" as per 2.2 of Annexure VIII. As per the Directive devices which penetrate the body through other than an establish body orifice are surgically invasive devices hence IV Cannula is "Surgically invasive device".
- As per Rule- 7 for Classification, all 'Surgically Invasive Devices' intended for short-term use are classified in Class IIa. Hence IV Cannula family is classified as Class IIa Medical device.

Device Description:

IV Cannula / Catheter commonly known as Intravenous Cannula is inserted into a vein, mainly for the administration of intravenous fluids, withdrawal of blood samples and to deliver Intravenous fluid and medicines into human circulating system and is being used as medical device for many years under different brands. The IV Cannula family is manufactured with high quality of raw material, ensuring optimal quality of the products.

Adva needle technology is designed to help clinicians improve first-stick proficiency by confirming immediate vessel entry at the point of insertion. Rapid flashback confirms vessel entry and may improve the chance of accessing difficult or compromised veins. Closed IV Cannula can be used subcutaneously also.

IV Cannula provided with integrated passive or active safety features to cover the needle after use to prevent the accidental needle prick injuries. Polyguard and Polyshield model provided with active safety feature and remaining models has passive safety feature. Product is provided with blood control feature also.

IV Cannula/Catheter with/without Safety Features, with FEP Catheter may remain in human circulatory system up to 48 hours and PUR catheter **may remain in situ up to 72 to 96 hours** or may be replaced if any complications occurred or as per CDC guideline.

The device is available in following variants:
