

Medical Surface Disinfectant

CHEMGENE HLD₄H continues the trend of leading edge biosecurity technologies established by Medimark Scientific and represents significant developments in disinfectant technology.

The formula combines a blend of synergistic actives with a surface active detergent allowing a product that will clean and disinfectant at the same time, whilst demonstrating efficacy in soiled conditions.

The actives used in the HLD₄ formula are being supported under Article 95 of the Biocidal Product Regulations.

CHEMGENE HLD₄H combines a formidable array of microbiological credentials with the enhanced facilities of faster and more effective anti-pathogenic activity.

Safety, Security and Simplicity have been enhanced too, allowing CHEMGENE HLD₄H to offer economic dilutions for virtually all environmental challenges.

CHEMGENE HLD₄H is manufactured in accordance with Quality Management System ISO 9001:2015 and is biodegradable under OECD conditions.

Medical Surface Disinfectant

The CHEMGENE HLD₄H formula combines a surface active detergent designed to aid the product to be used in soiled conditions, whilst providing cleaning and disinfection efficacy.

The synergistic blend of technology and active ingredients enables CHEMGENE HLD₄H to work quicker than comparable disinfectants and ensure that apoptosis (cell death) is achieved rather than merely suspending activity as with some products.

A safer to use disinfectant all round

Health and safety issues and product compatibility are of real importance to everyone. We encourage all users of chemical products to pay special attention to the advisory statements within Material Safety Data Sheets and upon product labelling.

APPLICATIONS

- For bio-hazard contamination (blood, urine, vomit etc.) dilute to 1:10 (10%). To make ready-to-use solution, dilute 50ml of concentrated product in 1 litre of water of a suitable quality
- Wash down all surfaces with disinfectant at 1:10 (10%) and dry with paper towel or allow to dry naturally.
- For high risk disinfection of organisms in dirty conditions, dilute at 1:50 (2%).
- For general disinfection of floors and walls, dilute at 1:100 (1%). To make ready-to-use solution, dilute 10ml of concentrated product in 1 litre of water of a suitable quality.
- See application sheets for further information.
- CHEMGENE HLD₄H wipes can also be used to wipe surfaces and be allowed to dry.
- CHEMGENE HLD₄H Medical Surface Disinfectant is available in 1 litre self dosing concentrate, 5 litre concentrate and also ready-to-use 750ml trigger spray diluted at 1:10.

MICROBIOLOGICAL EFFICACY

CHEMGENE HLD₄H has been tested effective against:

FUNGICIDAL ACTIVITY <i>Trichophyton rubrum</i> <i>Candida albicans</i>	MYCOBACTERICIDAL ACTIVITY <i>Mycobacterium terrae</i> <i>Mycobacterium avium</i>
VIRUCIDAL ACTIVITY Hepatitis B HIV Herpes Simplex Norovirus Vaccinia Adenovirus	BACTERICIDAL ACTIVITY <i>Pseudomonas aeruginosa</i> <i>Escherichia coli</i> <i>Staphylococcus aureus</i> <i>Enterococcus hirae</i> <i>Legionella pneumophila</i> <i>Salmonella typhimurium</i> <i>Listeria monocytogenes</i> Methicillin-resistant <i>Staphylococcus aureus</i> Methicillin-resistant <i>Staphylococcus pseudointermedius</i>
BACTERIOPHAGE ACTIVITY <i>Lactococcus lacti</i>	

MATERIALS COMPATIBILITY

Independent laboratory testing demonstrates no corrosion or deterioration of the following materials, even after long-term repeated immersions:

Rubber compounds, plastics, fiberglass, stainless steel, mild steel, aluminium, copper, brass and other materials found in clinical practice, in particular synthetic floors, instruments and devices.

Following testing by the department of Biochemistry at Cambridge University, HLD₄ formulation was proven to precipitate / denature double stranded DNA/RNA.
