

Pharmapore® Family

I.V. Dressings

Description:

Pharmapore® Family is a self-adhesive dressing having an absorbent pad with a low adherent wound contact layer, placed centrally on different backing materials coated with hypoallergenic adhesive, to allow fixation without secondary dressing.

Variants:

a- **Pharmapore® I.V.:** The dressing consists of a pad placed centrally on a non-woven backing material for patients with sensitive skin. The dressing has an incision along the middle for catheter and cannula fixation.

b- **Pharmapore® PU I.V.:** The dressing consists of a pad placed centrally on transparent, breathable, virus-proof, bacteria-proof and waterproof polyurethane film with an incision along the middle for catheter and cannula fixation.

Pharmapore® PU I.V. frame style: Film dressing without pad having frame style delivery system for easier application.

Features:

- **Breathable:** allowing oxygen and moisture vapor exchange.
- **Soft and Conformable:** as it conforms to skin surface even the difficult areas like underarm and shoulders.

Intended Purpose:

The IV variants are used for catheter and cannula fixation and securement.

In case of **Pharmapore® PU I.V.** variants:

- **Decreases risk of infection:** as PU film is waterproof, bacteria-proof and virus-proof.
- **Transparent:** which allows continuous visibility of the I.V. insertion site.
