NexTemp

MII's thermometry products employ "Precision Phase-Change" (PPC) technology, with is accurate to $\pm 0,1^{\circ}\text{C}$. The thermometers are thin plastic strips of material with an encapsulated matrix of harmless, non-toxic chemical dots at one end. Each dot in the matrix represents a specific temperature. The temperature dots cover a range of $35,5^{\circ}\text{C}$ to $40,4^{\circ}\text{C}$. The dots are a bright green color at normal room temperature. However, when the thermometer is placed in the mouth, the dots turn black in sequence. Each dot in the matrix turns from green to black as its own specific chemical temperature point is met. After the thermometer is removed from the mouth, the last black dot is read to determine the subject's actual temperature. The chemical dots will revert back to their original green state in a short period of time, so the unit can be reused (if reusable), or shipped in extreme hot or cold temperatures without damage.

NEXTEMP STANDARD - clinical oral thermometer

Convenient, single-use device.
Measuring range: +35,5°C +40,4°C, Accuracy: +/- 0,1 °C

Dataloggers

Thermometers are designed for record of temperature or temperature together with signal from a contact. Values are stored to a non volatile electronic memory. Data transfer to the personal computer for further analysis is performed via USB, RS232, GSM or Ethernet interface by means of a proper adapter.

Main thermometer applications:

- Transport of food or pharmaceuticals - tested by accredited laboratory in accordance with the European standard EN 12830 - Temperature recorders for transport, storage and distribution of chilled, frozen food.
- Food and beverage industry (HACCP)
- Pharmaceutical industry
- Blood stations, pharmacies
- Horticulture and cultivation of plants
- HVAC (heating, ventilation, air conditioning, cooling)
- Building and energy management
- Research and development
- Laboratories (GLP)
- Warehouses
- Technological processes
- Museums, archives, galleries

Thermometer advantages:

- included traceable calibration certificate from the manufacturer - Comet
- fast data transfer to the PC (full memory for approximately 30s)
- variability of connection to the computer - USB, RS232, Ethernet, GSM modem

- permanent connection to the PC enabled, data is possible to download even during logging
- large data memory 32000 values
- large dual line display with special symbols, switchable
- optional display of minimum and maximum measured values (reset of min/max memory from PC or by magnet)
- dual level alarm is enabled for each channel, alarm is indicated by blinking of the value on the LCD display or LED diode
- two alarm modes are enabled: instant or with memory (detected alarm is indicated permanently till alarm memory is cleared from the PC)
- robust watertight case
- easy installation, locking enabled
- low power consumption from battery, battery life up to 7 years
- indication of remaining battery life, easy replacement of the battery
- standard temperature sensor is Pt1000/3850ppm, switchable to Ni1000/6180ppm external probes at range -50 to +150°C
- it is possible to combine temperature measurement with logging of contact state (e.g. door contact)
- logging start/stop is enabled in several ways: at certain time and date programmed from computer, by delivered magnet or depending on binary input state (type S0841)
- also special logging mode is enabled, when logging runs only, if some of measured values are out of adjusted alarm limits
- each logger is possible to describe with text of maximum 32 characters
- each channel is possible to describe with text of maximum 16 characters
- password protection is enabled to prevent unauthorized manipulation with logger
