

## TECHNICAL SPECIFICATION OF DUSTBIN

The product is 548X520 mm wide, 1103 mm high. It consists of a bucket and a carrier part.

The bucket part will be made of sheet metal material with a diameter of 300 mm and a height of 520 mm.

The carrier leg part is formed by bending 1 piece of  $\varnothing 48$  mm pipe profile into a "U" shape and welding 2 pieces of  $\varnothing 48$  mm pipe into a "U" shape to become a leg again.

Garbage discharge will be provided by rotating the bucket 270° in the feet.

After the work on the metal parts is completed, the baking process will be carried out in order to remove the oil and rust on the metal and make it ready for painting.

Painting Method: After the baking process, the components are covered with electrostatic powder coating and the painting process is completed by baking at 180-200 degrees.
