Circulation Pump
High Efficiency Circulation Pump
Variable Frequency Booster Pump

CE  ISO 9001

GROWTH COURSE

Since 2008-2025

- 2008** Founded Zhejiang Wigo Pump Co., Ltd and started producing normal 3 speed circulation pump
- 2010** Started producing high efficiency circulation pump
- 2015** Developed magnet levitation circulation pump
- 2018** Developed inverter booster pump
- 2019** Moved into new plant, equipped with automatic robot arm production line
- 2025** Changed the company name into Zhejiang Wigo Intelligence Pump Co., Ltd

Professional
Circulation pump
Manufacturer

INTRODUCTION

ZHEJIANG WIGO INTELLIGENCE PUMP CO.LTD. was established in 2008, located at Zeguo Town, Wenling City, Zhejiang Province. It is known for the manufacturing of water pumps. The company has been dedicated to researching, developing, manufacturing and exporting circulation pumps as well as pumps for wall-hung boilers since 2008. The annual output is over 2.1 million.

The company operates in strict accordance with ISO9001: 2015 management system, along with different regulations in various countries. The company has obtained CCC, CQC, GS, CE, RoHS.REACH, TUVERP, and other certificates. These certificates ensure steadiness, reliability, efficiency and durability of products.

The company has a self-developed full-automatic assembly line since 2016, which can assemble each accessory to the whole pump purely by the mechanical hand. In 2019, the company moved to a new plant that covers 40,000 square meters with four additional automatic assembly lines along with an automatic storage & retrieval system, digital management to improve the efficiency and stability of production.

As one of the "High-tech enterprises" and "Top 20 Municipal key industrial enterprises", the company is dedicated to pursuing perfection and providing clients with the best products and more considerate after-sales service.

Operation condition:

1. Apply to heating system
2. Max. system pressure: 10bar
3. Operation condition:
 - Ambient Temperature: 0°C ~ 40°C
 - Ambient Humidity: 95%
 - Liquid Temperature: 2°C ~ 95°C
 - Ambient temperature must be lower than liquid temperature, in order to avoid condensate water produced in the interior of stator.
4. Liquid: Clean, non-corrosive and non-explosive liquids, without any particle, fiber or mineral oil. Water/glycol mixtures max. mixing ratio: 1:1
5. Dry running no more than 10min.

EA Series

EAB Series

Setting	pump curve	Function
PP1	Lowest proportional-pressure curve	The duty point of the pump will move up or down on the lowest proportional-pressure curve, depending on heating demand. The head (pressure) is reduced at falling heating demand and increased at rising heating demand.
PP2	Highest proportional-Pressure curve	The duty point of the pump will move up or down on the highest proportional-pressure curve, depending on heating demand. The head (pressure) is reduced at falling heating demand and increased at rising heating demand.
CP1	Lowest constant-Pressure curve	The duty point of the pump will move out or in constant-pressure curve, depending on the heating demand. The head (pressure) is kept constant, irrespective of the heating demand.
CP2	Highest constant-Pressure curve	The duty point of the pump will move out or in constant-pressure curve, depending on the heating demand. The head (pressure) is kept constant, irrespective of the heating demand.
III	Speed III	Pump runs at a constant speed and consequently on a constant curve. In speed III, the pump is set to run on the Max. curve under all operating conditions. Quick venting of the pump can be obtained by setting the pump to speed III for a short period.
II	Speed II	Pump runs at a constant speed and consequently on a constant curve. In speed II, the pump is set to run on the Medium curve under all operating conditions.
I	Speed I	Pump runs at a constant speed and consequently on a constant curve. In speed I, the pump is set to run on the Min. curve under all operating conditions.
AUTO (EX-factory Setting)		Under "AUTO" mode, the power of pump automatically be up or down according to flow of system in certain condition.
night mode		Pump runs select to night mode, after one hour the power automatically down, after two hours, it will be down lowest between 5-10watt, after seven hours, the pump auto mode eliminate and recovery to original condition.

Product features

Shielding pump, variable frequency adaptive, quiet and efficient

Applications

Air conditioning, refrigeration secondary system
Combined heating and circulation

Materials

Pump body: cast iron
Impeller: PES
Bearing: Ceramic
Shaft: Ceramic
Motor: International class H high temperature copper wire

Operation interface

Working mode switch key

First speed Second speed Third speed ECO Mode

Product features

- Shielding pump, variable frequency adaptive, quiet and efficient

Applications

- Air conditioning, refrigeration secondary system
- Combined heating and circulation

Materials

- Pump body: cast iron
- Impeller: PES
- Bearing: Ceramic
- Shaft: Ceramic
- Motor: International class H high temperature copper wire

Operation interface

PWM sign input(%)

- <5: Pump runs at max speed
- 5-85: Pump linear runs from max to min
- 85-93: Pump runs at min speed (running)
- 85-88: Pump runs at min speed (start)
- 93-100: Pump stop

PWM sign input(%)

- <5: Pump stop
- 7-15: Pump runs at min speed (running)
- 12-15: Pump runs at min speed (start)
- 15-90: Pump linear runs from min to max
- >95: Pump runs at max speed

• The PWM could be customized for real application

Product features

- Shielding pump, variable frequency adaptive, quiet and efficient

Applications

- Air conditioning, refrigeration secondary system
- Combined heating and circulation

Product advantage

- Permanent magnet motor
- Frequency conversion technology
- Use hot and cold water at the same time- -pressurization and circulation.
- Protection function : rotor locked protection, open circuit protection,overheat protection, short circuit protection.
- Memory function
- Constant voltage automatic function

RS12/1.2EMB		0.6		220/60			●	●	72	101	65	126	112		1/2"	1.1

Advantages

Economical
lower power consumption
(5w-9w)

Special construction
extremely silent

Permanent magnet motor
easy for clean and replacement

Time and Temperature
control system

I II III	Displayed during time setting, not displayed during normal operation, representing three time periods.
ON OFF	Displayed during time and temperature setting, not displayed during normal operation, representing start and stop
88:88	When setting, display the temperature and time by pressing the button; Display the working time and temperature when working.
⏻	Display when under time and temperature control working mode.
8 W	Display working power
⏻	Stop working
⏻	Manual working mode
⏻	Pump working
⏻	Auto working mode

Note:

- 1.ON/OFF: for Time setting function: ON means start for time or temperature. OFF means stop for time and temperature.
- 2.Displayed during time and temperature setting, not displayed during normal operation, representing start and stop. But it will display the set Time and temperature in turn with a time interval of 5S.
- 3.If all three times setting periods are set with 0, the pump is working only based on temperature.

Mode change Button: hold it in short time

Function setting: hold it with 3s. Under this mode, hold this button in short time to function set:

1. Temperature setting: Temperature on, Temperature off
2. Time setting: Setting the Time for I: time for on and off then Time for II: time for on and off, at least is the time for III no operation for 10s, Pump will keep the functions above and log out this function

Time mode change button: hold in short time
Time correction: hold it in 5s

Additional button: hold in short time to plus 1 under setting function
Forbidden all functions for Temperature: hold it for 5s.

Subtraction button: hold in short time to minus 1 under the setting function
Forcen the pump to work until the setting Temperature for one time: hold it for 5s

Working Rule:

1. Start Temperature < Stop Temperature: When the pump senses that the water temp. is lower than the Setting start Temp. it will start to work until the temperature rises to the setting stop temperature. It will repeat this work when water temperature is lower.

For example: Start Temp.: 38°C, Stop Temp.: 42°C, water temp.: 15°C. The pump works until water temp. reaches 42°C. It will restart when the water temp. is lower than 38°C.

RS EA-C

Product advantage

- Economical pump design with easy operation
- Magnetically coupled pump with variable frequency drive, quiet and energy efficient
- Multiple operation modes with real-time power monitoring

Application Scope

- Residential and commercial water pressure boosting (cold/hot water)
- Industrial machinery supporting equipment

Operation interface

WGZ15/45EA

Product functions

Household well water, tap water pressurization, domestic heating pressurization circulation.

Comparing to conventional self-priming pumps, the shielded structure can effectively reduce the noise and water leakage problems. High and low temperature water can also be used to play a two-way function: automatic booster circulation system. According to the actual usage, the user can perform the exchange of pressurization and circulation in the same water pump.

Product advantage

- Permanent magnet motor
- Frequency conversion technology
- Temperature control
- Use hot and cold water at the same time - pressurization and circulation.
- Protection functions: locked rotor protection, undervoltage protection, abnormal temperature reminder, waterless operation protection, water leakage protection
- Wifi function
- Memory function
- Constant voltage automatic function

Applications

This model can be used for all kinds of water using of household, hot water circulation, tap water pressurization, garden irrigation, vegetable greenhouse water supply, etc.

WGZ15/45EA power and head can be automatically adjusted according to the water demand to maintain a stable water output.

Operation interface

Model	Connection Size (Inch)	Rated flow (m³/h)	Rated head (m)	Max. Head (m)	Rated Power (W)	Input Power (W)
WGZ 15/45EA	1"	2.5	25	45	600	600

- Multiple working modes, display the working power in real time

Application Scope

- For household and commercial water pressure boosting, as well as hot water pressure boosting
- Supporting for industrial mechanical equipment

Operation interface

Power switch Button

1. When it is in the power-off state, press the power button lightly once to turn it on.
2. When it is powered on, long press the power button for 5 seconds to turn it off.

Plus Button

1. When the water pump is in operation, it is directly used to adjust the maximum head.
2. Adjust the value when setting the temperature.

Minus Button

1. When the water pump is running, it is directly used to adjust the maximum head.
2. When setting the temperature, adjust the value.

Child Lock

1. When the water pump is running, long-press the **+** and the **-** simultaneously to enter the child lock mode. In the child lock mode, the button functions cannot be used.
- Long-press the **+** and the **-** again to exit the child lock mode.

Product advantage

- Anti-Condensation
- Permanent Magnet Shielded Motor
- PCB fully potted with polyurethane
- Shielded pump, frequency conversion adaptive, quiet and efficient

Application Scope

- Air conditioning and refrigeration dual-supply systems
- Air source heat pumps, gas boilers, radiant floor heating circulation
- Industrial machinery equipment support

Operation interface
