Foundation: August, 1971

To whom it may concern.

Letter of explanation.

GYC500 is the multifunction laser is housed in a small console. The space-saving design allows portability to virtually any room. The GYC-500 can be integrated into the NIDEK CV-30000, ophthalmic surgical system.

Incorporating Vixi, scan delivery units, into the laser GYC-500 enables laser treatments with various scan patterns.

There are 22 preprogrammed scan patterns (Vixi) to allow treatment of varying retinal pathologies.

The GYC-500 with the Vixi enhances treatment efficiency and reduces patient chair time.

The GYC-500 is possible to use without Vixi as doctor decides or used to practice. It makes the laser treatment much longer. Anyway the doctor decides to have the laser GYC-500 with Vixi (preprogrammed patterns) or without.

P.S. The registration procedure at the GYC-500 is obligatory. Vixi is the delivery way and doesn't need to be registered. Vixi doesn't consider as the treatment unit.

Please, learn the attached brochure thoroughly and Nidek website.

NIDEK Co. Ltd.:

A handwritten signature in blue ink, appearing to read "H. Shimazaki", is written over a horizontal line.

Hiroshi Shimazaki
