# Wound Closure

Wounds which do not heal naturally are treated with wound closure devices. The affected tissues need to be kept in apposition until the healing process provides the wound with proper strength to stand against the stress without any assistance. A wound can be treated with the help of various devices such as sutures, staplers, topical adhesives or clips. Different tissues have their own unique functions and requirements. When one decides on a particular wound closure device, one must take care of the healing needs of the particular tissue which is being treated.

The most common device used for wound closure is suture. Sutures, in general term 'stitches', are sterilized surgical threads, which are used to ligate blood vessels or to approximate tissues.

## Sutures are generally categorized as:

- Absorbable and Non-Absorbable
- Natural and Synthetic
- Monofilament and Braided

Absorbable sutures have a tendency to degrade as the wound heals. Non-Absorbable sutures oppose the body's efforts to dissolve them. On complete healing of the wound, surgeons remove the non-absorbable sutures. Meril Endo-Surgery has a wide range of synthetic absorbable sutures which are made from Polyglactin 910 (MITSU family), Polydioxanone (FILAXYN), Poliglecaprone 25 (FILAPRON) Polyglycolic Acid (MEGASORB family) as well as Barbed Sutures with two variants (Polydioxanone and Poly Glycolide-Co-Caprolacrone). Among non absorbable sutures Meril portfolio covers Polypropylene (FILAPROP), Polyamide (FILAMIDE) and Polyester (MERICRON XL). In natural absorbable sutures, Meril portfolio covers Chromic and Plain Catgut (MERISOFT) and in natural non-absorbable we have silk (FILASILK).

For placement of sutures, surgical needles are used, which are made of stainless steel. Different types and sizes of needles are used depending on the area of application. We are dedicated to assist surgeons in tissue repair by giving them a broad gamut of products with our unmatched quality and service.

# Meril Endo-Surgery Needles

In pursuit of offering best quality products, Meril sutures are paired with the superior stainless steel needles for an unparalleled surgical experience.

Meril sutures come with sharper and stronger needles (300 series Stainless Steel) specifically designed to meet the ever growing needs in all the surgical disciplines.

Round body needle, recommended for blood vessels

Round body/ Taper needle with black finish for enhanced visibility under glaring OT lights

# Understanding the Suture Codes

Meril code logic represents the necessary information needed to identify the required suture-needle combination. The suture codes are alphanumeric in nature to indicate the suture material, the suture size, and the reference code. The alphabetical suffixes are a key to understand the additional features about the suture and/or the needle.
