# eclipse & copernic

Compliant and hypercompliant balloon catheters

Designed to temporarily stop or control blood flow, to treat vasospasms, and for embolization of aneurysms with balloons.

Copernic

Eclipse

balloon size from 4 to 6 & 3 to 5mm

Navigation

Hydrophilic coating
on both the catheter & the balloon
for a smooth progression

Compatibility with hybrid1214D guidewire
which ensures support & trackability

Compliant & hypercompliant balloons

Made from a very supple elastomer*
to easily conform to the anatomy

Rapid inflation deflation
with 1/2 contrast*

Good visibility
thanks to 2RX markers providing the
balloon length

With courtesy of
Dr Sukalyan Purkayastha, India

Remodeling

Both Eclipse and Copernic
can be used in parallel with
a coiling microcatheter in a
single 6F guiding catheter
(FARGOMAX6F)

occlusion catheters with balloon

copernic

Reference	Total length (cm)	Balloon length (mm)	Balloon diameter (mm)	Maximum volume (mL)	Guidewire recommended
SCOPERNIC10	160	10	3 to 5	0.25	Compatible with .012" guidewire (packaging includes a HYBRID1214D)
