

Validated detection and identification of *Salmonella* species in 2 days

Thermo Scientific™ Salmonella PreciS™ Method

Rapid, simple culture-based method

A quick and easy method for the enrichment, detection and confirmation of *Salmonella* species from a broad range of foods, animal feed and environmental samples.

- Validated according to ISO 16140-part 2:2016 standard against ISO 6579-1:2017
- Simple procedure — no specialized equipment required
- Single overnight in either Buffered Peptone Water or Thermo Scientific™ ONE Broth *Salmonella*
- Single sample transfer
- Single 24-hour plate incubation
- Quick and convenient confirmation: Thermo Scientific™ Oxoid™ *Salmonella* Latex Test or ISO 6579:2017 standard tests
- Reduced time to result: 2 days compared with up to 5 days for standard culture methods
- Thermo Scientific™ *Brilliance*™ *Salmonella* Agar with novel Inhibigen technology, for targeted specificity and reduced background flora

*refer to IFU for exact incubation times and temperatures by sample type

Reactions on *Brilliance Salmonella* Agar

	Colony colour/appearance		
	Purple	Blue	Colourless
Enzyme targeted by chromogen	<i>Salmonella</i> (including Lactose positive <i>Salmonella</i>)	<i>Klebsiella</i> , <i>Enterobacter</i> , <i>Serratia</i>	<i>Citrobacter</i> , other bacteria and yeasts
Esterase	+	-/+	-
β-glucosidase	-	+	-

E. coli and other bacteria and yeasts are inhibited by the combination of the Inhibigen and other selective agents in the medium.

Streamline laboratory workflow and reduce handling

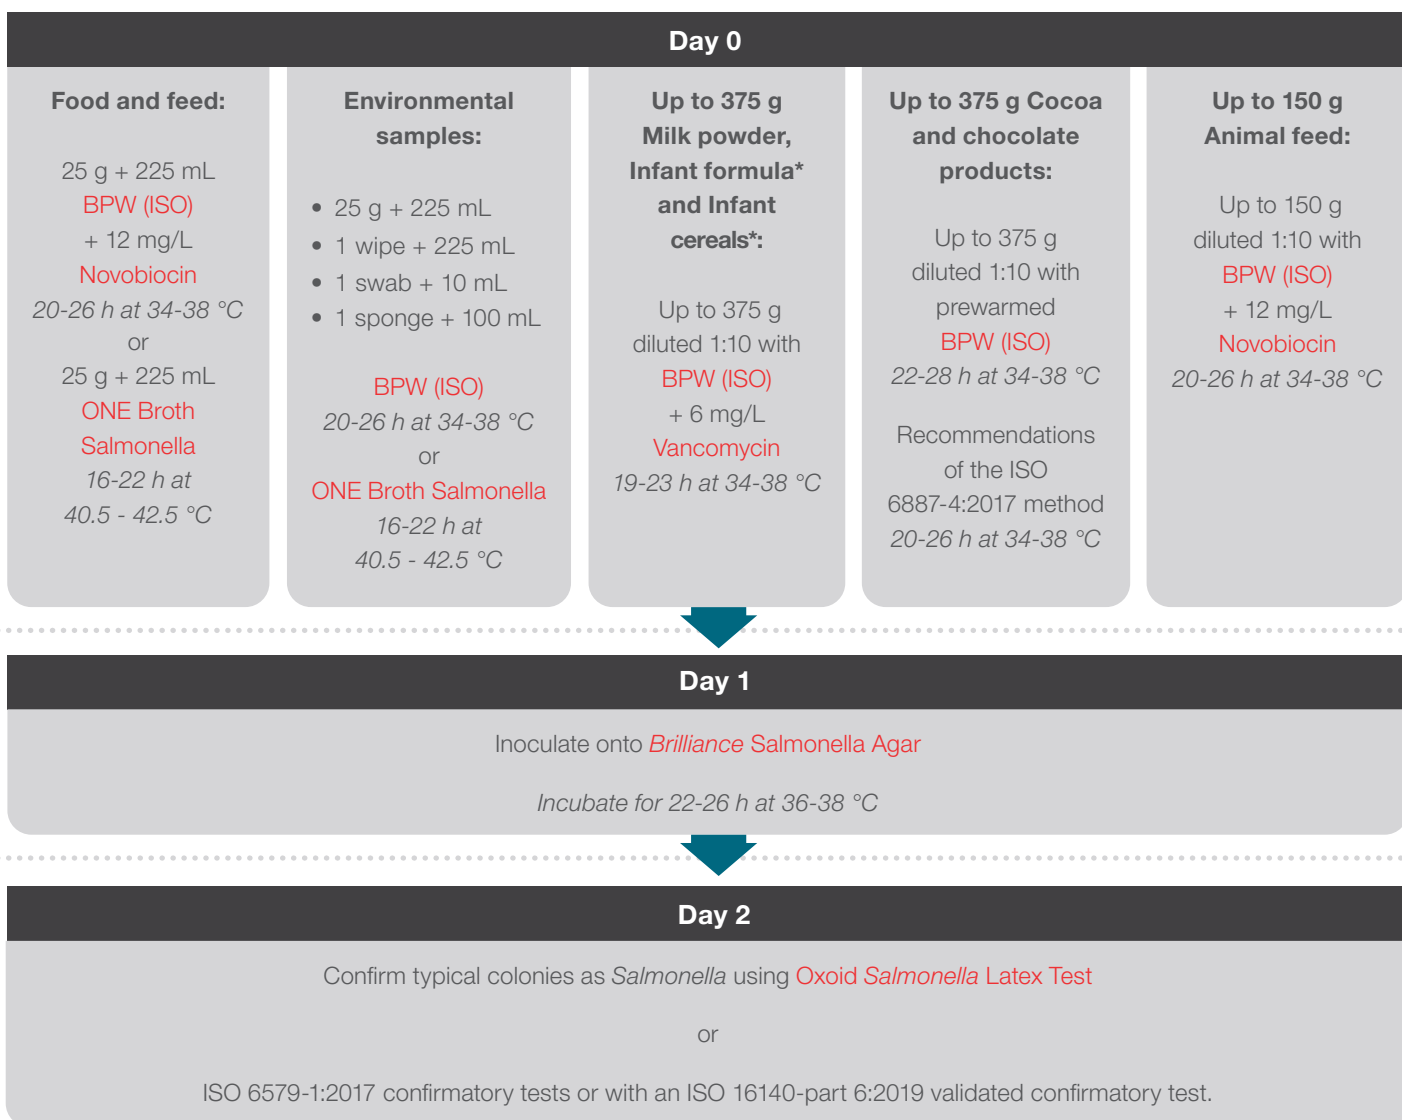

A single sample preparation step for *Salmonella* detection and other analyses, such as Total Viable Counts, when Buffered Peptone Water (BPW) is selected for *Salmonella* Precis Method enrichment.

Validated according to ISO 16140-2:2016 by NF VALIDATION for AFNOR Certification

The Salmonella Precis Method has been validated and approved by NF VALIDATION for AFNOR Certification according to ISO 16140-2:2016 standard against the reference method ISO 6579-1:2017 Detection of *Salmonella* spp.

For flexibility, confirmation was validated using both the Oxoid Salmonella Latex Test and the tests outlined in ISO 6579:2017. Alternatively, biochemical panels such as Thermo Scientific™ Microbact™ GNB 24E or Thermo Scientific™ RapID ONE™ Panel, may be used.

AFNOR Certification validation certificate No. UNI 03/06-12/07 is available in PDF format from the AFNOR website <https://nf-validation.afnor.org/en/food-industry/salmonella-spp/>.

*with or without probiotics

Ordering information

Product description			Format	Order code
Thermo Scientific™ Oxoid™ Culture Media	Buffered Peptone Water	Buffered Peptone Water (ISO)	500 g, makes 25 L	CM1049B
		Buffered Peptone Water (ISO-meat peptone)	500 g, makes 25 L	CM1211B
	Novobiocin Supplement	Novobiocin Supplement - freeze-dried	10 vials of 10 mg	SR0181E
		Novobiocin Supplement - liquid (10 mg/mL)	10 vials of 40 mg	SR0249A
	Vancomycin Supplement	Vancomycin Supplement - freeze-dried	10 vials of 3 mg	SR0186E
		Vancomycin Supplement - freeze-dried	10 vials of 5 mg	SR0247E
	ONE Broth Salmonella	ONE Broth Salmonella Base	500 g, makes 20 L	CM1091B
		ONE Broth Salmonella Supplement	10 vials, each for 225 mL	SR0242B
	Brilliance Salmonella Agar	Brilliance™ Salmonella Agar Base	500 g, makes 9.3 L	CM1092B
		Brilliance™ Salmonella Agar Selective Supplement	10 vials, each for 500 mL	SR0194E
Thermo Scientific™ Oxoid™ Salmonella Latex Kit			100 tests	DR1108A

Please note that a range of alternative formats of culture media such as Bagged Enrichment Media and Prepared Plate Media are available. Please contact your local representative or technical services to find out more.
