Visible Flashback Blood collection Needle

Flashback blood collection needle is a multi-sample needle that provides instant confirmation of needle placement, through a unique visual flashback indication.

The Flashback needle avoids the need to probe for a vein, as well as the potential of multiple sticks of the same patient in cases where the vein is hard to find.

The needle has a transparent plastic hub, which functions as a view window.

Latex free, EO sterile, non toxic, non pyrogenic, polypropylene hubs are color marked.

Cat. No.	Specification	Color	Needle Size
632001	20G	Yellow	1"
632002			1.1/2"
632003	21G	Green	1"
632004			1.1/2"
632005	22G	Black	1"
632006			1.1/2"
