

# Guidewires

## Quattro Guidewire

### One Wire, Multiple Purposes

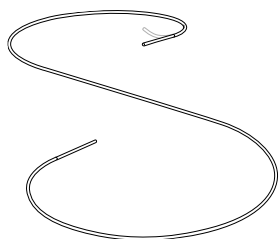

The PTFE coated, dual-flex, Nitinol Quattro guidewire provides smooth, reliable access for virtually every situation. It combines two guidewires in one: Silver tipped end of the guidewire has a stiff flex pattern similar to an Amplatz guidewire, the gold tipped end a softer flex pattern similar to a Bentson guidewire.

### For Advancement

- Kink resistant Nitinol core for worry free insertion.
- Low friction PTFE coated main body for easy tracking through anatomy and effortless advancement of catheters, stents, etc.
- HydraSilk coated tips (ultra slippery silicone-based hydrophilic coating) for effortless passage around obstructions and through torturous anatomy.

### For Safety

- Tungsten coiled tips provides unsurpassed radiopacity for clear fluoroscopic identification.
- Specially designed coiled tips and coating surface finish prevent inadvertent migration.

| <b>50BX</b> | Quattro guidewire, 0.35" diameter, 150 cm length, tip length: 5 cm coil, straight tip, straight, stiff and regular body, sterile, single-use, 5 pcs. |
|-------------|------------------------------------------------------------------------------------------------------------------------------------------------------|

## SureGlide Guidewires

The SureGlide guidewire combines a torque-stable and kink-resistant Nitinol core with a highly lubricious, hydrophilic-coated jacket to enable easy navigation through tortuous anatomy and smooth tracking of instruments. Scope-friendly rounded ends ease insertion.

**SurLok Helical Baskets**

Spiral shape helps engage and hold stones with greater efficacy. Rounded wires significantly minimize tissue trauma. Simple handle rotation facilitates easy capture of stone fragments. Available with a filiform tip and in 3-, 4-, and 6-wire designs.

- Broad selection:  
Meets your specific needs.
- Strong, reliable designs:  
Ensure controlled, accurate performance.
- Ergonomic handle and patented locking mechanism:  
Enables precise manipulation and secure control.

# Ureteral Stents

## Tecoflex

### Sof-Curl

- Two durometers of unique Tecoflex provide firmness necessary for advancement and extra softness at body temperature for increased patient comfort.
- Unique soft bladder curl design reduces irritation to the trigone.
- Exclusive 360° kidney curl minimizes migration and reduces trauma during removal.
- Waxed, braided nylon tether:  
Soft, safe, comfortable, and removable
- Axial ring, medial line, trailing suture, and incremental markings aid in proper placement and orientation.
- Ultra slippery hydrophilic coating on inside and outside surfaces:  
Glides over any guidewire and through difficult anatomy.
- Spiral drainage hole design resists kinking and buckling.
- Radiopaque filler provides clear fluoroscopic visualization.

sterile, single-use

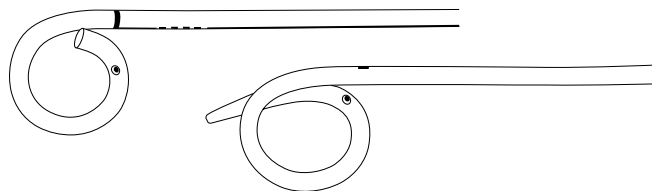

#### Delivery includes:

Stent, attached braided nylon tether, RAMROD metal tip push catheter

### Classic Double PigTail

Classic Double PigTail Ureteral Stents have an exclusive balanced-curved double pigtail design that minimizes migration. They also feature unique Tecoflex construction for easy insertion and enhanced patient comfort.

- Advanced Tecoflex construction:  
Firm during placement for easier stent passage, then softens at body temperature for increased patient comfort.
- Exclusive bladder curl design provides balanced stability and comfort.
- Exclusive 360° kidney curl minimizes migration and reduces trauma during removal.
- Ultra slippery hydrophilic coating on inside and outside surfaces  
glides over any guidewire and through difficult anatomy.
- Axial ring, medial line, trailing suture, and incremental markings aid in proper placement and orientation.
- Spiral drainage hole design resists kinking and buckling.

sterile, single-use

**Lubri-Flex**

- Advanced Tecoflex construction:  
Firm during placement for easier stent passage, then softens at body temperature for increased patient comfort.
- Unique 270° bladder curl: Less material minimizes trigone irritation.
- Exclusive 360° kidney curl:  
Minimizes migration and reduces trauma during removal.
- Ultra slippery hydrophilic coating on inside and outside surfaces:  
Glides over any guidewire and through difficult anatomy.
- Axial ring, medial line, trailing suture, and incremental markings aid in proper placement and orientation.
- Spiral drainage hole design resists kinking and buckling.
- Radiopaque filler provides clear fluoroscopic visualization.
