Scleral fixation lens are implanted inside the eyes with the help of scleral support. Scleral fixation is an alternate way of fixing the IOL in the posterior chamber. It is indicated in case of Weak zonules, Posterior capsular tear and improper capsular bag support.

## Scleral Fixation IOL

### Product features:

- Larger optic diameter and overall length to suit for all capsular bags.
- Made of High quality PMMA material which has proven clinical performance.
- Holes in the haptic enables manipulation of lens into the bag.

Model Number	SC6530
Optic Diameter	6.5 mm
Position Holes	0
Overall Diameter	13.0 mm
Optic Design	Equiconvex
Haptics Design	Modified 'C' Loop
Angulation	10°
A Constant	118.5 (optical) 118.2 (ultrasound)

ACD	5 mm
Diopter range	6.0D to 30.0D 15.0D to 25.0D in 0.5D

It has 2 holes in the haptics at 180°.

Lens Material	UV absorbing PMMA with the proven clinical performance
Refractive Index	1.49
