MA 33 – AM-00/523450/2022-3/DOL
Reference Letter – Central traffic control center

Vienna, 21.07.2022

Dear Ladies and Gentlemen,

The city of Vienna operates more than 1300 traffic light systems from different manufacturers, most of which are connected via the OCIT interface and controlled by the urban traffic control center Scala.

Since 2020 Yunex (former Siemens AG / Siemens Mobility) has supplied and commissioned more than 40 sX traffic light controllers in different configurations and voltage versions and connected them to the central traffic control center Scala via OCIT V2.0

We confirm that the sX controllers as well as the communication with the central system Scala works to our complete satisfaction.

Best regards,
the head of Department

i.V. Ing. Gerhard Grasnek
