

# Certificate of Registration

QUALITY MANAGEMENT SYSTEM - ISO 13485:2016

This is to certify that:

Microbiologics, Inc.  
200 Cooper Avenue North  
St. Cloud  
Minnesota  
56303  
USA

Holds Certificate No:

**FM 595607**

and operates a Quality Management System which complies with the requirements of ISO 13485:2016 for the following scope:

Design, Development, Production and Distribution of Microorganism and Molecular Controls.

For and on behalf of BSI:

\_\_\_\_\_  
Gary E Slack, Senior Vice President - Medical Devices

Original Registration Date: 2013-06-13

Latest Revision Date: 2020-07-20

Effective Date: 2020-07-20

Expiry Date: 2023-06-12

Page: 1 of 1

...making excellence a habit.™

SCOPE OF ACCREDITATION TO ISO/IEC 17025:2017

MICROBIOLOGICS, INC.  
200 Cooper Avenue North  
St. Cloud, Minnesota 56303  
Tina Sobania Phone: 320 229 7050

BIOLOGICAL

Valid To: February 29, 2024

Certificate Number: 2655.01

In recognition of the successful completion of the A2LA evaluation process, accreditation is granted to this laboratory to perform the following analyses:

<u>Test</u>	<u>In-House Method</u>
Antimicrobial Disk Susceptibility:	
Extended Spectrum Beta Lactamase (ESBL) Procedure	SOP.378
Disk Diffusion Susceptibility	SOP.848
Beta Lactamase Detection by Cefinase Disk	SOP.374
Bruker Microflex MALDI Biotyper	SOP.2724
Catalase Test-Hydrogen Peroxide	SOP.403
CFU Enumeration using Auto Plater and Auto Count, Assay Procedure #2	SOP.166
Chlamyospore Production-Cornmeal Agar	SOP.405
Coagulase Test-Rabbit Plasma Method	SOP.431
Differential Medium-Bile Esculin Agar Test	SOP.401
Fermentation Determination w/ Purple Broth	SOP.947
Germ Tube Test with Fetal Bovine Serum	SOP.410
Gram Stain Procedure	SOP.344
Indole Spot Test	SOP.435
Kinyoun Acid-Fast Stain Procedure	SOP.346
Lactophenol Blue	SOP.342

<u>Test</u>	<u>In-House Method</u>
Motility Determination by Motility B Medium	SOP.474
MRSA Screen, Mueller Hinton Agar w/ 4% NaCl with 6mcg/ml Oxacillin Procedure	SOP.722
Nitrate Reduction-Nitrate Broth	SOP.444
Oxidase Test Procedure	SOP.433
Rim <i>Escherichia coli</i> O157:H7 Test	SOP.407
Salmonella Slide Agglutination-Statens Serum Institut Salmonella O Antisera	SOP.1216
Vitek 2 Identification Card Procedure	SOP.1426

## Accredited Laboratory

A2LA has accredited

**MICROBIOLOGICS, INC.**

*St. Cloud, MN*

for technical competence in the field of

**Biological Testing**

This laboratory is accredited in accordance with the recognized International Standard ISO/IEC 17025:2017 *General requirements for the competence of testing and calibration laboratories*. This accreditation demonstrates technical competence for a defined scope and the operation of a laboratory quality management system (refer to joint ISO-ILAC-IAF Communiqué dated April 2017).

Presented this 18<sup>th</sup> day of February 2022.

A blue ink signature of the Vice President, Accreditation Services, written over a horizontal line.

Vice President, Accreditation Services  
For the Accreditation Council  
Certificate Number 2655.01  
Valid to February 29, 2024

*For the tests to which this accreditation applies, please refer to the laboratory's Biological Scope of Accreditation.*

SCOPE OF ACCREDITATION TO ISO 17034:2016

MICROBIOLOGICS, INC.  
200 Cooper Avenue North  
St. Cloud, Minnesota 56303  
Tina Sobania Phone: 320 229 7050

REFERENCE MATERIAL PRODUCER

Valid To: February 29, 2024

Certificate Number: 2655.02

In recognition of the successful completion of the A2LA evaluation process, accreditation is granted to this Reference Material Producer for the production of Certified Reference Materials and Reference Materials of the following types:

<b>Certified Reference Material/ Artifact or Matrix</b>	<b>Concentration Ranges and Associated Uncertainty</b>	<b>Test Analysis Measurement</b>	<b>Method/ Characterization Technique</b>
Microbial Reference Cultures			
Epover™ CRM Quantitative Certified Reference Materials for the Identity and Quantitation of Bacteria, Fungi and Yeast. (Lyophilized Format)	Range: (10 <sup>2</sup> to 10 <sup>8</sup> ) Uncertainty: within ± 0.6 of a log of the assigned value  N/A	Viability  Identity	CFU enumeration using automated plating and counting  Phenotyping: Manual and automated biochemical, serological; staining, microscopy, selective media
Lab-Elite™ CRM Qualitative Certified Reference Materials for Bacteria, Fungi and Yeast. (Lyophilized Format)	N/A	Identity	Phenotyping: Manual and automated biochemical, serological; staining, microscopy, selective media.

Reference Material/ Artifact or Matrix	Concentration Ranges	Test Analysis Measurement	Method/ Characterization Technique
<p>Microbial Reference Cultures</p> <p>Epower™, EZ-Accu Shot™, EZ-Accu Shot Select, EZ-CFU™, EZ-CFU™ One Step. Quantitative Reference Materials for the Identity and Quantitation of Bacteria, Fungi and Yeast. (Lyophilized Format)</p> <p>KWIK-STIK™, KWIK-STIK™ Plus, LYFO DISK™, UVBioTAG™ Qualitative Reference Materials for Bacteria, Fungi and Yeast. (Lyophilized Format)</p> <p>EZ-Accu Shot™ Starved Cells Quantitative Reference Materials for the Identity and Quantitation of Bacteria, Fungi and Yeast. (Lyophilized Format)</p> <p>EZ-PECTM™ Quantitative Reference Materials for the Identity and Quantitation of Bacteria, Fungi and Yeast. (Lyophilized Format)</p>	<p>(10 to 100) CFU per 0.1 ml on non-selective media</p> <p>N/A</p> <p>N/A</p> <p>(500 to 2000) CFU per pellet</p> <p>N/A</p> <p>2.0 x 10<sup>7</sup> to 9.9 x 10<sup>7</sup> CFU per pellet</p> <p>N/A</p>	<p>Viability</p> <p>Identity</p> <p>Identity</p> <p>Viability</p> <p>Identity</p> <p>Viability</p> <p>Identity</p>	<p>CFU enumeration using automated plating and counting</p> <p>Phenotyping: Manual and automated biochemical, serological; staining, microscopy, selective media</p> <p>Phenotyping: Manual and automated biochemical, serological; staining, microscopy, selective media</p> <p>CFU enumeration using automated plating and counting</p> <p>Phenotyping: Manual and automated biochemical, serological; staining, microscopy, selective media</p> <p>CFU enumeration using automated plating and counting</p> <p>Phenotyping: Manual and automated biochemical, serological; staining, microscopy, selective media</p>

## microbiologics.com

In support of our commitment to quality service, we have developed our website to be a helpful, easy-to-use resource for customers. The website is updated regularly and is the best place to obtain the most current information. Listed below are examples of the resources available:

- Digital catalog
- Product descriptions and applications
- End user registration
- Certificates of Analysis and Certificates of Performance
- Online ordering
- Contact Us form
- Instructions for Use (multiple translations)
- Locate a distributor by country
- Safety Data Sheets (multiple translations)
- Customer & Technical Support documents
- Easy-to-use product and document search
- Frequently asked questions
- Order management

## Customer Service

We take pride in providing you with exceptional customer service. Customer calls are answered by a team of experts ready to assist you with everything from account set up to placing an order.

All international customers should contact an authorized distributor for ordering information. Locate a distributor in your area by visiting [microbiologics.com](http://microbiologics.com). If an authorized distributor is not listed in your country, please contact Microbiologics Customer Service.

## Worldwide Distribution

Our extensive distribution network allows us to reach every corner of the world, from Afghanistan to Zambia. We select distributors that are customer focused and demonstrate a commitment to our mission of providing the highest quality biomaterials for a safer, healthier world. Locate a distributor in your area by visiting [microbiologics.com](http://microbiologics.com).

## International Customers

All international customers must contact an authorized distributor within their country to place an order. To search for distributors by country, visit [microbiologics.com](http://microbiologics.com). If an authorized distributor is not listed in your country, please contact Microbiologics Customer Service at [info@microbiologics.com](mailto:info@microbiologics.com) or +1 320.253.1640.

## USA Customers

Customers located within the United States may purchase Microbiologics products directly or through an authorized distributor. Visit [microbiologics.com](http://microbiologics.com) to search for distributors in the United States. Orders can be placed online at [microbiologics.com](http://microbiologics.com) or by contacting Customer Service. Be prepared to provide the following information with your order:

- Customer account number
- Billing address
- Shipping address
- Telephone number
- Fax number
- Email address
- Purchase order number
- Quantities
- Registration number
- Credit card information
- Microbiologics catalog number(s) or reference culture number(s)
- Tax exemption information (certified exemption form must be kept on file)

Online orders can be placed at [microbiologics.com](http://microbiologics.com) by signing in on the homepage or clicking "Register" to create an account.

## Product Warranty

Microbiologics guarantees results when the product is stored, handled and used as directed (as per the Expiration Date, Microbiologics Recommended Growth Requirements, Illustrated Instructions and Product Inserts). Please report concerns to Microbiologics Technical Support immediately. For more information, see the document titled Product Warranty and Product Replacement located at [microbiologics.com](http://microbiologics.com).

## Culture Methods

The selection of media, temperature, atmosphere, and growth time are all critical considerations to achieving the desired results for growing microorganisms. We provide detailed instructions for how to successfully grow the microorganism strains we produce. See the Culture Method tab on each item detail page on our website or download the *Recommended Culture Methods for Microorganisms* technical bulletin (TIB.081).

## Antimicrobial Resistance Strains

Microbiologics offers a wide range of strains with characterized antimicrobial resistance mechanisms including:

- Extended-Spectrum  $\beta$ -lactamases (ESBLs)
- Carbapenamases
- Vancomycin-Resistant Enterococci (VRE)
- Methicillin-Resistant *Staphylococcus aureus* (MRSA)

These strains come in convenient, ready-to-use formats which are used for the quality control of laboratory developed tests, antimicrobial resistance tests and tests for toxinotypes. For more information on antimicrobial resistance strains available from Microbiologics, see the *Antimicrobial Resistance Strains document* (TIB.2025) at [microbiologics.com](http://microbiologics.com)

## Mean Assay Value

The mean assay value provided on the label is the average assay value obtained by Microbiologics. Specific methods and materials are employed in determining the mean assay value. Your results may differ from the assay value listed on the product's label due to the use of different materials and methods. However, Microbiologics guarantees that if processed as directed, your results will be within the specific CFU concentration range designated for each individual product line.

## End User Registration

An authorized representative from your organization must agree to the terms of the End User Agreement in order to receive Microbiologics biological materials. A royalty fee will be charged on behalf of the culture collection. Registration can be completed at [microbiologics.com](http://microbiologics.com). Contact Customer Service at 1.320.253.1640 or [info@microbiologics.com](mailto:info@microbiologics.com) with questions about the End User Agreement.

## Payment Options

Microbiologics accepts payment by the following methods:

- ACH
- Check (payable to Microbiologics, Inc.)
- Credit Card
- Money Order
- Wire Transfer

**Important:** To ensure your payment is processed accurately, please note your account number and the invoice number on all correspondence and payments.

### Credit Card Purchases

Microbiologics welcomes the use of VISA®, MasterCard® and American Express®.

### Terms

- All invoices are payable “Net 30 Days” (with the exception of credit card payments)
- Past due accounts are subject to finance charges of 1.5% per month
- All payments are paid in United States Dollars (USD)
- If not reflected on an invoice, the purchaser is responsible for all applicable State Sales and Use Taxes
- When paying by wire transfer the customer is responsible to pay all applicable transfer fees. Please email Microbiologics Customer Service at [info@microbiologics.com](mailto:info@microbiologics.com) to review options for wire transfer fee payments.

## Shipping and Delivery

Orders are shipped within 48 hours unless a specific shipping date is requested. All shipments are EXW (Ex Works) Saint Cloud, Minnesota, unless prior arrangements are made. Lyophilized microorganisms are identified as Biological Substance Category B or Infectious Substance and are subject to regulated packaging materials, special labeling, and special shipping requirements. All shipping and handling charges will be listed as separate line items on the invoice.

Products are shipped at ambient temperature unless otherwise requested. The outside of the shipping container is identified with the notation “refrigerate upon receipt” to assure proper handling and storage upon arrival. Due to the nature of our products, we are unable to accept returns. If any product arrives in a damaged condition, the carrier must note the condition on the delivery receipt. All claims for products damaged during shipment must be made within 30 days of receipt. Microbiologics guarantees the performance of our products at all times. If at any time you are dissatisfied with our products or service, please contact our Customer Service team at 1.320.253.1640 or [info@microbiologics.com](mailto:info@microbiologics.com) for resolution.

## Trademarks

Microbiologics® Trademarks: Epower™, Epower™ CRM, EZ-Accu Shot™, EZ-Accu Shot™ Select, EZ-SPORE™, EZ-CFU™, EZ-PEC™, KWIK-STIK™, KWIK-STIK™ Plus, Lab-Elite™, LYFO DISK™, and UV-BioTAG™ are trademarks of Microbiologics, Inc. Microbiologics® is a registered trademark of Microbiologics, Inc.

\*Look for the ATCC Licensed Derivative® Emblem for all products derived from ATCC® cultures. The ATCC Licensed Derivative Emblem, the ATCC Licenses Derivative Word Mark, and the ATCC Catalog Marks are trademarks of ATCC. Microbiologics, Inc. is licensed to use these trademarks and to sell products derived from ATCC® cultures.

## Simple, Reliable Qualitative QC Microorganisms

## Highlights:

- Over 900 strains available
- All-in-one design reduces the risk of contamination
- Ready-to-use format saves time and money
- Refrigerated storage is easy and economical
- Online Certificate of Analysis provides detailed strain information
- Traceability to reference cultures ensures authenticity
- Technical Support experts available for guidance
- Strains are three passages or fewer from the reference culture
- FDA listed and CE Marked as an *In Vitro* Diagnostic (IVD) Medical Device

## Applications:

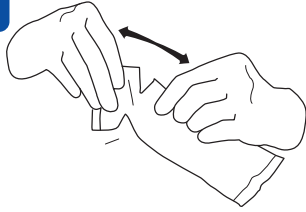

- Culture purposes
- Daily QC
- Verification and Validation
- QC of diagnostic systems and assay kits
- QC of Antimicrobial Susceptibility Test

## Package Details:

- All-in-one design including a lyophilized microorganism pellet, ampoule of hydrating fluid and inoculating swab
- Packs of two or six
- Instructions for Use
- Also available in QC Sets and Panels (each QC Set and Panel is designed to contain the QC strains recommended by the instrument manufacturer or regulatory standard)

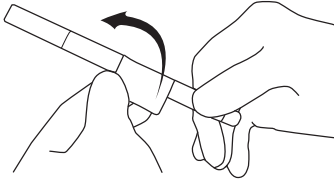

**1**

Allow the unopened KWIK-STIK™ pouch to equilibrate to room temperature. Tear open pouch at notch and remove the KWIK-STIK unit.

**2**

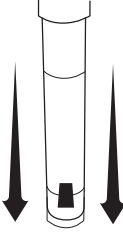

Tear off Pull-Tab portion on the label and attach it to primary culture plate or QC record. Do not disassemble the device during hydration.

**3**

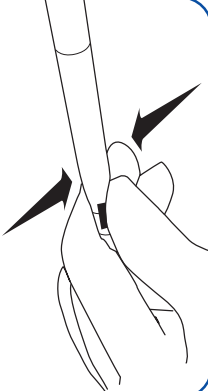

Over the edge of the work bench or counter, crack the ampoule at the top of the KWIK-STIK (just below the fluid meniscus of the ampoule) found in the cap to release the hydrating fluid.

**4**

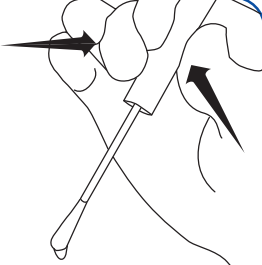

Hold vertically and tap on a hard surface to facilitate flow of fluid through shaft into bottom of unit containing pellet. Allow the hydrating fluid to flow through the swab shaft and into the bottom portion of the unit containing the pellet.

**5**

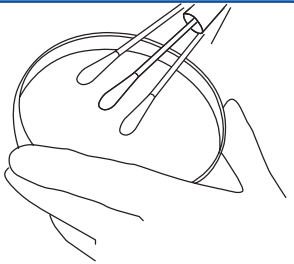

Using a pinching action on the bottom portion of the unit, crush the pellet in the fluid until the pellet suspension is homogenous.

**6**

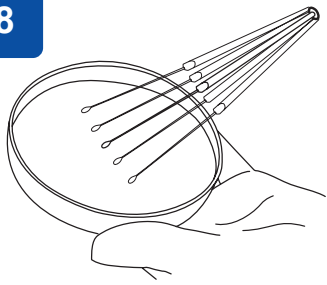

Immediately heavily saturate the swab with the hydrated material and transfer to agar medium, or use according to the laboratory's SOP.

**7**

Inoculate the primary culture plate(s) by gently rolling the swab over one-third of the plate.

**8**

Using a sterile loop, streak to facilitate colony isolation.

**9**

Using proper biohazard disposal, discard the KWIK-STIK.

**10**

Immediately incubate the inoculated primary culture plate(s) at temperature and conditions appropriate to the microorganism.

# LYFO•DISK™

Economical Qualitative QC  
Microorganisms for a Variety of Culture  
Purposes and QC Applications

## Highlights:

- Over 900 strains available
- Easy to use – simply rehydrate the pellet and inoculate
- Convenient test ready format saves time and money
- Refrigerated storage is easy and economical
- Online Certificate of Analysis provides detailed strain information
- Traceability to reference cultures ensures authenticity
- Technical Support experts available for guidance
- Strains are three passages or fewer from the reference culture
- FDA listed and CE Marked as an *In Vitro* Diagnostic (IVD) Medical Device

## Applications:

- Media and reagent QC
- QC of microbial identification including biochemical, PCR, and rapid molecular methods
- Water tests (e.g., enzyme substrates)
- Antimicrobial Susceptibility Tests
- Disinfectant studies
- Verification and Validation
- Proficiency tests

## Package Details:

- Vial of 6 qualitative lyophilized microorganism pellets
- Instructions for Use

1

Remove the unopened LYFO DISK™ vial from 2°C to 8°C storage and allow the unopened vial to equilibrate to room temperature.

2

Aseptically remove 1 pellet with sterile forceps from the vial. Do not remove desiccant.

3

Place the pellet in 0.5 ml of sterile fluid (water, saline, TSB, or BHIB).

Immediately stopper and recap vial and return the resealed vial to 2°C to 8°C storage.

4

Crush the pellet with a sterile swab until the suspension is homogenous. Immediately heavily saturate the same swab with the hydrated material and transfer to agar medium.

5

Inoculate the primary culture plates(s) by gently rolling the swab over one-third of the plate.

6

Using a sterile loop, streak to facilitate colony isolation.

7

Using proper biohazard disposal discard the remaining hydrated material.

8

Immediately incubate the inoculated media at temperature and conditions appropriate to the microorganism.

## KWIK-STIK and LYFO DISK

LYFO DISK	KWIK-STIK 6-Pack	KWIK-STIK 2-Pack	Product Description	Price Code	BSL	Comment
0682L	0682K	0682P	Escherichia coli derived from ATCC® 13762™*	C	1	
0543L	0543K	0543P	Escherichia coli derived from ATCC® 14169™*	C	1	
01037L	01037K	01037P	Escherichia coli derived from ATCC® 15597™*	E	1	Host for MS2 Bacteriophage (ATCC® 15597™-B1)
0203L	0203K	0203P	Escherichia coli derived from ATCC® 23848™*	C	1	Genotype B
0335L	0335K	0335P	Escherichia coli derived from ATCC® 25922™*	A	1	CLSI and EUCAST control for antimicrobial susceptibility testing
0495L	0495K	0495P	Escherichia coli derived from ATCC® 35218™*	C	1	TEM-1 beta-lactamase producer (non-ESBL); CLSI and EUCAST control for antimicrobial susceptibility testing
0422L	0422K	0422P	Escherichia coli derived from ATCC® 35421™*	C	1	
0433L	0433K	0433P	Escherichia coli derived from ATCC® 4157™*	C	1	
0869L	0869K	0869P	Escherichia coli derived from ATCC® 51446™*	C	2	
01233L	01233K	01233P	Escherichia coli derived from ATCC® 51739™*	C	1	
0860L	0860K	0860P	Escherichia coli derived from ATCC® 51755™*	D	1	
0791L	0791K	0791P	Escherichia coli derived from ATCC® 51813™*	D	1	
01137L	01137K	01137P	Escherichia coli derived from ATCC® 700609™*	E	1	Designation CN13; Bacteriophage host
0231L	0231K	0231P	Escherichia coli derived from ATCC® 700728™*	C	1	Serotype O157:H7; nontoxicogenic
0483L	0483K	0483P	Escherichia coli derived from ATCC® 8739™*	C	1	
0115L	0115K	0115P	Escherichia coli derived from ATCC® 9637™*	D	1	
01261L	01261K	01261P	Escherichia coli derived from ATCC® BAA-1429™*	D	1	This is a non-pathogenic E. coli strain recommended by the USDA as a surrogate indicator organism to measure changes in microbial counts
01242L	01242K	01242P	Escherichia coli derived from ATCC® BAA-2452™*	C	2	New Delhi metallo-beta-lactamase (NDM-1) positive; blaNDM positive by PCR; Carbapenem-resistant (Imipenem and Ertapenem)
01113L	01113K	01113P	Escherichia coli derived from ATCC® BAA-2469™*	E	2	New Delhi metallo-beta-lactamase (NDM-1) positive; blaKPC negative by PCR; blaNDM positive by PCR; Carbapenem-resistant (Imipenem and Ertapenem)
01229L	01229K	01229P	Escherichia coli ATCC® BAA-2523™*	C	2	Resistant to Ertapenem
01259L	01259K	01259P	Escherichia coli derived from CDC AR-0346	D	2	Extended-spectrum beta-lactamase (ESBL) positive; contains mcr-1 gene

\*Look for the ATCC Licensed Derivative® Emblem for all products derived from ATCC® cultures. Microbiologics, Inc. is licensed to use these trademarks and to sell products derived from ATCC® cultures.

# KWIK-STIK and LYFO DISK

LYFO DISK	KWIK-STIK 6-Pack	KWIK-STIK 2-Pack	Product Description	Price Code	BSL	Comment
01062L	01062K	01062P	Escherichia coli derived from NCTC 8622	C	2	Serovar O126:K7(B16):H2; export license required for shipping outside the U.S.
01109L	01109K	01109P	Escherichia coli derived from NCTC 9001	C	2	
0706L	0706K	0706P	Escherichia coli derived from NCTC 10538	B	1	K12
0861L	0861K	0861P	Escherichia coli derived from NCTC 12900	C	1	Serotype O157:H7; non toxigenic
01193L	01193K	01193P	Escherichia coli derived from NCTC 13167	C	2	
01192L	01192K	01192P	Escherichia coli derived from NCTC 13216	C	2	
01085L	01085K	01085P	Escherichia coli derived from NCTC 13351	D	1	TEM-3 ESBL
01136L	01136K	01136P	Escherichia coli derived from NCTC 13476	D	2	IMP-type
01265L	01265K	01265P	Escherichia coli derived from NCTC 13353	C	2	Routine QC strain for Disk Diffusion and MIC Testing of Beta-Lactam Combination Agents per CLSI M100-28Ed; blaCTX-M-15 gene; susceptible to Cefepime-tazobactam combination
01244L	01244K	01244P	Escherichia coli derived from NCTC 13846	D	2	Colistin resistant; MCR-1 positive; harbors multiple other resistance genes (visit product page at microbiologics.com to view all genes)
<b>Eurotium</b>						
01160L	01160K	01160P	Eurotium rubrum derived from ATCC® 42690™*	E	1	Mold
<b>Finegoldia</b>						
0409L	0409K	0409P	Finegoldia magna derived from ATCC® 29328™*	D	1	
<b>Fluoribacter</b>						
0212L	0212K	0212P	Fluoribacter bozemanii derived from ATCC® 33217™*	E	2	
<b>Fusarium</b>						
0531L	0531K	0531P	Fusarium solani derived from ATCC® 36031™*	E	2	Mold
<b>Fusobacterium</b>						
01191L	01191K	01191P	Fusobacterium mortiferum derived from ATCC® 25557™*	D	1	
0407L	0407K	0407P	Fusobacterium necrophorum subsp. necrophorum derived from ATCC® 25286™*	D	2	
0328L	0328K	0328P	Fusobacterium nucleatum subsp. nucleatum derived from ATCC® 25586™*	D	2	
<b>Gardnerella</b>						
0410L	0410K	0410P	Gardnerella vaginalis derived from ATCC® 14018™*	C	2	

\*Look for the ATCC Licensed Derivative® Emblem for all products derived from ATCC® cultures. ## KWIK-STIK and LYFO DISK

LYFO DISK	KWIK-STIK 6-Pack	KWIK-STIK 2-Pack	Product Description	Price Code	BSL	Comment
0353L	0353K	0353P	<i>Pseudomonas aeruginosa</i> derived from ATCC® 27853™*	A	2	Contains inducible AmpC beta-lactamase; CLSI and EUCAST control for antimicrobial susceptibility testing; Microbiologics does not recommend the use of this strain for testing Ceftriaxone using the disk diffusion method. We have found that this strain is displaying resistance to Ceftriaxone using this method - this strain may not give consistent test results for the Ceftriaxone MIC well.
0975L	0975K	0975P	<i>Pseudomonas aeruginosa</i> derived from ATCC® 35032™*	C	2

Bundled Sets and Panels of  
Microorganisms for Assay,  
Diagnostic System and Test Kit QC

## Highlights:

- Each **assay or diagnostic system** QC set or panel contains the manufacturer recommended quality control strains for a particular instrument or test in an easy-to-use format
- Each **regulation-specific** QC set or panel contains the regulation-specific (e.g., CLSI) recommended quality control strains for a particular test in an easy-to-use format
- One simple catalog number for fast, easy ordering
- Protects your reputation by providing documentation and assurance that the laboratory can consistently produce accurate results
- Ensures testing procedures and materials are working properly
- Convenient, test-ready format saves time and money
- Technical Support experts available for guidance

## Applications:

- QC of microbial identification and detection instruments and commercial diagnostic assays including biochemical, PCR and molecular technologies
- QC of CLSI® Antimicrobial Susceptibility Testing (AST) and many other common tests
- Verification and Validation
- Proficiency

## Package Details:

- Live Culture QC Sets and Panels: KWIK-STIK™ 2-Pack (two KWIK-STIKs of each microorganism)

Visit [microbiologics.com](http://microbiologics.com) to view molecular QC Sets and Panels

# PARASITE SUSPENSIONS

Simple, Reliable QC Testing  
for Parasitology Diagnostic  
Kits and Methods

## Highlights:

- Convenient, test-ready format saves time and money
- Designed to mimic a patient sample for simple control processing
- Includes a Certificate of Performance that provides a detailed description of the specimen
- Online Certificate of Analysis provides detailed strain information
- FDA listed and CE Marked as an *In Vitro* Diagnostic (IVD) Medical Device
- Convenient and economical room temperature storage and two year shelf life
- **WARNING:** Cancer and reproductive harm - [www.P65Warnings.ca.gov](http://www.P65Warnings.ca.gov)

## Applications:

- QC of diagnostic test kits and methods
- Microscopic examinations
- Acid-fast staining procedures
- Proficiency tests
- Education

## Package Details:

- Vial containing a 1 ml suspension of parasite species
- Instructions for Use
- Certificate of Performance

1

Thoroughly mix the suspension by vigorously shaking or vortexing.

2

Allow the suspension to settle for 5-10 minutes before use in any testing procedure.

3

Carefully insert a pipette into the bottom of the vial and remove a single drop for testing. Consult laboratory SOPs, stain, or kit manufacturer instructions for testing procedures.

## Parasite Suspensions

Catalog Number	Product Description	Comments
FP05	Ascaris lumbricoides Parasite Suspension	Fecal suspension containing Ascaris lumbricoides eggs fixed in formalin
FP02	Cryptosporidium species Parasite Suspension	Fecal suspension containing Cryptosporidium oocysts fixed in formalin
FP03	Diphyllobothrium latum Parasite Suspension	Fecal suspension containing Diphyllobothrium latum eggs fixed in formalin
FP12	Endolimax nana Parasite Suspension	Fecal suspension containing Endolimax nana cysts fixed in formalin
FP13	Entamoeba coli Parasite Suspension	Fecal suspension containing Entamoeba coli cysts fixed in formalin
FP01	Giardia lamblia Parasite Suspension	Fecal suspension containing Giardia lamblia cysts fixed in formalin
FP11	Hymenolepis nana Parasite Suspension	Fecal suspension containing Hymenolepis nana eggs fixed in formalin
FP09	Iodamoeba butschlii Parasite Suspension	Fecal suspension containing Iodamoeba butschlii cysts fixed in formalin
FP10	Necator americanus Parasite Suspension	Fecal suspension containing Necator americanus eggs fixed in formalin
FP06	Strongyloides stercoralis Parasite Suspension	Fecal suspension containing Strongyloides stercoralis larvae fixed in formalin
FP04	Taenia species Parasite Suspension	Fecal suspension containing Taenia eggs fixed in formalin
FP08	Trichuris trichiura Parasite Suspension	Fecal suspension containing Trichuris trichiura eggs fixed in formalin

**WARNING:** Cancer and reproductive harm - [www.P65Warnings.ca.gov](http://www.P65Warnings.ca.gov)

# QC MICROBIOLOGY SLIDES

## Microbiology Slides for QC of Microscopic Examinations

## Highlights:

- Convenient, test-ready format saves time and money
- Room temperature storage is easy and economical
- FDA listed and CE Marked as an *In Vitro* Diagnostic (IVD) Medical Device
- Online Certificate of Analysis provides detailed strain information
- Technical Support experts available for guidance

## Applications:

- Acid-fast stain controls
- Blood parasites
- Tissue parasites
- Intestinal parasites
- Gram stain controls
- Mycology controls
- Proficiency
- Education

## Package Details:

- Box of ten slides
- Each slide contains droplets of an air-dried, fixed and preserved organism, or a smear
- Instructions for Use

# QC Microbiology Slides

Catalog Number	Product Description
<b>SL40-10</b>	<b>Acid Fast Control Slide</b> This quality control slide provides two air-dried and methanol-fixed droplets within two etched circles. The circle nearest the label contains a droplet of an Acid Fast-Positive Mycobacterium gordonae derived from ATCC® 14470™*. The circle farthest from the label contains a droplet of an Acid Fast-Positive Cryptosporidium in a fecal sample and also contains Acid Fast-Negative intestinal bacteria.
<b>SL90-10</b>	<b>Blood Parasite Control Slide</b> This quality control slide provides an air-dried, methanol-fixed, blood parasite smear containing Plasmodium, Babesia or Trypanosoma.
<b>SL45-10</b>	<b>Cryptosporidium Control Slide</b> This quality control slide provides a single, air-dried and methanol-fixed fecal smear containing Acid Fast-Positive Cryptosporidium and Acid Fast-Negative intestinal bacteria.
<b>SL50-10</b>	<b>FYC (Culture Isolates) Control Slide</b> This quality control slide provides a single, air-dried and methanol-fixed preparation containing Candida albicans derived from ATCC® 10231™*.
<b>SL01-10</b>	<b>Gram Stain Control Slide</b> This quality control slide provides two air-dried and methanol-fixed droplets within two etched circles. The circle nearest the label contains a droplet of Gram-Positive Staphylococcus aureus derived from ATCC® 25923™*. The circle farthest from the label contains a droplet of a Gram-Negative Escherichia coli derived from ATCC® 25922™*.
<b>SL60-10</b>	<b>MYC-D (Clinical Samples) Control Slide</b> This quality control slide provides a single, air-dried and methanol-fixed preparation containing Candida albicans derived from ATCC® 10231™* with Leucocytes and Erythrocytes.
<b>SL41-10</b>	<b>Mycobacterium Control Slide</b> This quality control slide provides two air-dried and methanol-fixed droplets within two etched circles. The circle nearest the label contains an Acid Fast-Positive Mycobacterium gordonae derived from ATCC® 14470™* and the circle farthest from the label contains an Acid Fast-Negative Erysipelothrix rhusiopathiae derived from ATCC® 19414™*.
<b>SL70-10</b>	<b>Pneumocystis carinii Control Slide</b> This quality control slide provides a single, air-dried and methanol-fixed rat lung tissue preparation containing Pneumocystis.
<b>SL75-10</b>	<b>Pneumocystis carinii Two-Well Control Slide</b> This quality control slide provides two, air-dried and methanol-fixed impression smears within two etched circles. One sample contains a rat lung tissue preparation that is positive for Pneumocystis carinii. The other sample contains a rat lung tissue preparation that is negative for Pneumocystis carinii.
<b>SL15-10</b>	<b>SAF-Preserved Fecal Smear Control</b> This quality control slide provides an air-dried, SAF preserved, fecal smear containing a representative intestinal protozoa, usually Giardia lamblia.
<b>SL10-10</b>	<b>Zinc PVA-Preserved Fecal Smear Control</b> This quality control slide provides an air-dried, Zinc PVA-preserved, fecal smear containing a representative intestinal protozoa, usually Giardia lamblia.

# Lab-Elite™

CERTIFIED REFERENCE MATERIAL

## Qualitative QC Microorganisms Classified as Certified Reference Material to Meet ISO 17025 Requirements

### Highlights:

- Qualitative QC microorganisms one passage from the reference strain for ultimate authenticity
- For testing laboratories, Section 6.5.2 of ISO 17025:2017 states: “The laboratory shall ensure that measurement results are traceable to the International System of Units (SI) through: b) certified values of certified reference materials provided by a competent producer with stated metrological traceability to the SI...”
- FDA listed and CE Marked as an *In Vitro* Diagnostic (IVD) Medical Device
- Ready-to-use format saves time and money
- Refrigerated storage is easy and economical
- Online Certificate of Analysis provides detailed strain information
- Traceability to reference cultures ensures authenticity
- Technical Support experts available for guidance

### Applications:

- Verification and Validation
- Presence/absence
- Identification methods
- ISO 17025 laboratories requiring CRM

### Package Details:

- One KWIK-STIK™ – all-in-one design includes a lyophilized microorganism pellet, ampoule of hydrating fluid and inoculating swab
- Certificate of Analysis
- Instructions for Use

## ILLUSTRATED INSTRUCTIONS

1

Allow the unopened Lab-Elite™ (KWIK-STIK™) pouch to equilibrate to room temperature. Tear open pouch at notch and remove the KWIK-STIK unit.

2

Tear off Pull-Tab portion on the label and attach it to primary culture plate or QC record. Do not disassemble the device during hydration.

3

Over the edge of the work bench or counter, crack the ampoule at the top of the KWIK-STIK (just below the fluid meniscus of the ampoule) found in the cap to release the hydrating fluid.

4

Hold vertically and tap on a hard surface to facilitate flow of fluid through shaft into bottom of unit containing pellet. Allow the hydrating fluid to flow through the swab shaft and into the bottom portion of the unit containing the pellet.

5

Using a pinching action on the bottom portion of the unit, crush the pellet in the fluid until the pellet suspension is homogenous.

6

Immediately heavily saturate the swab with the hydrated material and transfer to agar medium.

7

Inoculate the primary culture plate(s) by gently rolling the swab over one-third of the plate.

8

Using a sterile loop, streak to facilitate colony isolation.

9

Using proper biohazard disposal, discard the KWIK-STIK.

10

Immediately incubate the inoculated primary culture plate(s) at temperature and conditions appropriate to the microorganism.

## Quantitative QC Microorganisms Classified as Certified Reference Material for ISO 17025 Accredited Laboratories

### Highlights:

- Quantitative QC microorganisms one passage from the reference strains for ultimate authenticity
- For testing laboratories, Section 6.5.2 of ISO 17025:2017 states: "The laboratory shall ensure that measurement results are traceable to the International System of Units (SI) through: b) certified values of certified reference materials provided by a competent producer with stated metrological traceability to the SI..."
- Available in concentrations ranging from  $10^2$  to  $10^8$  CFU per pellet
- Can be combined for a mixed microorganism population
- Easily manipulated to deliver desired CFU concentrations
- Ready-to-use format saves time and money
- Refrigerated storage is easy and economical
- Online Certificate of Analysis provides detailed strain information
- Traceability to reference cultures ensures authenticity
- Technical Support experts available for guidance

### Applications:

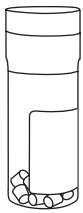

- Verification and Validation
- Enumeration methods
- ISO 17025 laboratories requiring CRM

### Package Details:

- Vial of ten quantitated lyophilized microorganism pellets
- Certificate of Analysis
- Instructions for Use

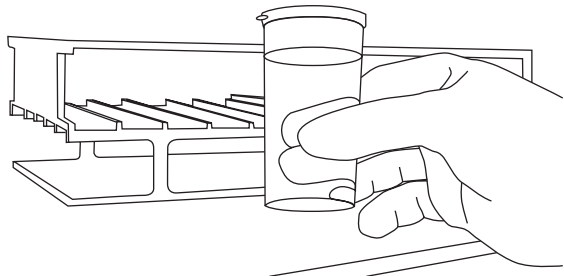

**1**

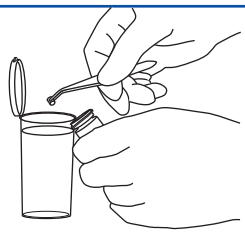

Remove the vial of pellets from refrigerated storage and allow to equilibrate to room temperature.

**2**

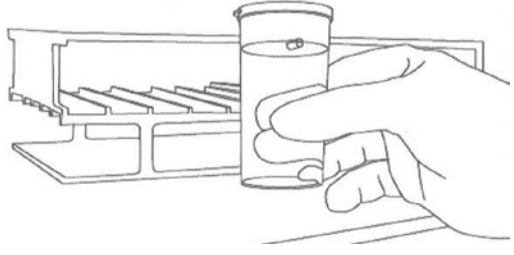

Prior to use, warm hydrating and dilution fluids to 34°C–38°C. Sterile pH 7.2 phosphate buffer is recommended for hydration of the lyophilized preparation.

**3**

With sterile forceps, transfer the Epower™ CRM microorganism pellet(s) to the hydrating fluid. Do not remove the desiccant from vial. Immediately stopper and recap the vial and return to 2°C–8°C.

**4**

Place the microorganism suspension into a 34°C–38°C incubator for 30 minutes to assure complete hydration.

**5**

Immediately following incubation, mix hydrated material until a homogeneous suspension is achieved.

**6**

Proceed with the challenge according to laboratory protocol. The challenge must be completed within 30 minutes of the hydration process to avoid a change in the challenge suspension concentration.

*Not intended for clinical use*

# UV·BioTAG™

Qualitative Ready-to-Use  
QC Microorganisms with  
Green Fluorescent Protein Tags

## Highlights:

- Fluoresces under UV light to distinguish QC strains from other possible contaminants
- Instant dissolve pellet reduces preparation time
- Refrigerated storage is easy and economical
- Online Certificate of Analysis provides detailed strain information
- Traceability to reference cultures ensures authenticity
- Technical Support experts available for guidance

## Applications:

- Enumeration methods
- Detection methods
- Demonstration of Capability (DOC)
- Media QC
- Verification and Validation

## Package Details:

- **Swab Kits:** six all-in-one devices including a lyophilized microorganism pellet, ampoule of hydration fluid and inoculating swab
- **Vial Kits:** six lyophilized microorganism pellets in individual glass vials
- Instructions for Use

1

Following completion of the incubation period or test method, colonies growing on agar may be examined for fluorescence to determine whether the growth originated from the control strain or from contaminants.

2

A long wave UV lamp and a dark room are needed for the detection of fluorescence. UV-BioTAG microorganisms' fluorescence is best detected using a UV lamp that emits the following wavelengths:

- a. 315 nm to 400 nm (for use with Escherichia, Salmonella and Shigella strains)
- b. 475 – 495 nm (for use with Listeria monocytogenes strains; use simultaneously with blue light barrier glasses)

3

Hold the lamp over the microorganism culture being tested for fluorescence. Visually examine the culture and determine whether or not it fluoresces. The expected result when the culture is being grown on Tryptic Soy Agar is a green fluorescence. Other agars and variables within each laboratory's processes may produce fluorescence with varying colors, or may mask the expression of the GFP due to biochemical byproducts produced during the test.

4

Green fluorescent proteins will continue to be expressed upon subculturing, but it is recommended that a new pellet suspension be used for each test. If the resuscitated culture is frozen, Microbiologics cannot guarantee the stated characteristics of the product.

*Not intended for clinical use*

# EZ·SPORE™

## Quantitative QC Microorganisms for Validation and Verification of Spoilage Detection Methods

## Highlights:

- EZ-SPORE™ contains 10<sup>4</sup> CFU per pellet
- Ready-to-use format saves time and money
- Refrigerated storage is easy and economical
- Online Certificate of Analysis provides detailed strain information
- Traceability to reference cultures ensures authenticity
- Technical Support experts available for guidance
- Strains are three passages or fewer from the reference culture

## Applications:

- Daily Food Process Controls
- Spoilage Detection Methods
- Disinfectant Qualification Studies

## Package Details:

- Vial of ten lyophilized pellets
- Instructions for Use

# EZ-SPORE™ ILLUSTRATED INSTRUCTIONS

1

Remove the vial of pellets from refrigerated storage. Allow the unopened vial to equilibrate to room temperature (about 30 minutes).

2

Prior to use, warm hydrating and dilution fluids to 34°C-38°C. Sterile pH 7.2 phosphate buffer is recommended for hydration of the lyophilized preparation.

3

With sterile forceps, transfer the EZ-SPORE™ microorganism pellet to the hydrating fluid. Do not remove the desiccant from vial. Immediately stopper and recap vial and return to 2°C-8°C.

4

Place the microorganism suspension into a 34°C-38°C incubator for 30 minutes to ensure complete hydration.

5

Immediately following incubation, mix hydrated material until a homogeneous suspension is achieved.

9

Proceed with the challenge according to laboratory protocol.

10

The challenge must be completed within 30 minutes of the hydration process to avoid a change in the challenge suspension concentration.

*Not intended for clinical use*

## Extremely Versatile, Ready-to-Use Quantitative QC Microorganisms for Enumeration Methods

### Highlights:

- Available in concentrations ranging from  $10^2$  to  $10^8$  CFU per pellet
- May be combined for a mixed microorganism population
- Easily manipulated to deliver a wide variety of concentrations
- Ready-to-use format saves time and money
- Refrigerated storage is easy and economical
- Online Certificate of Analysis provides detailed strain information
- Traceability to reference cultures ensures authenticity
- Technical Support experts available for guidance
- Strains are three passages or fewer from the reference culture

### Applications:

- Detection and enumeration methods
- Verification and Validation
- Bioburden determination
- Minimal lethal concentration
- Disinfectant qualification
- Water tests
- Proficiency tests
- Methods requiring a specific CFU range

### Package Details:

- Vial of ten quantitated lyophilized pellets
- Instructions for Use

1

Remove the vial of pellets from refrigerated storage and allow to equilibrate to room temperature.

2

Prior to use, warm hydrating and dilution fluids to 34°C - 38°C. Sterile pH 7.2 phosphate buffer is recommended for hydration of the lyophilized preparation.

3

With sterile forceps, transfer the Epower™ microorganism pellet(s) to the hydrating fluid. Do not remove the desiccant from vial. Immediately stopper and recap the vial and return to 2°C - 8°C.

4

Place the microorganism suspension into a 34°C - 38°C incubator for 30 minutes to assure complete hydration.

5

Immediately following incubation, mix hydrated material until a homogeneous suspension is achieved.

6

Proceed with the challenge according to laboratory protocol. The challenge must be completed with 30 minutes of the hydration process to avoid a change in the challenge suspension concentration.

*Not intended for clinical use*

## Qualitative QC Microorganisms Only Two Passages from Reference Culture for Special Applications

### Highlights:

- Ideal for special applications requiring strains that are fewer passages from the reference culture
- Two passages from the reference culture, allowing for more subcultures
- FDA listed and CE Marked as an *In Vitro* Diagnostic (IVD) Medical Device
- Convenient test-ready format saves time and money
- Refrigerated storage is easy and economical
- Online Certificate of Analysis provides detailed strain information
- Traceability to reference cultures ensures authenticity
- Technical Support experts available for guidance

### Applications:

- Antibiotic assays
- Instrument validations
- Validation of neutralization methods
- Suitability of sterility tests
- Disinfectant qualification

### Package Details:

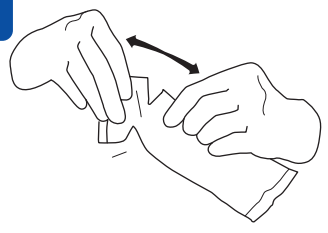

- All-in-one design includes a lyophilized microorganism pellet, ampoule of hydrating fluid and inoculating swab
- Pack of five KWIK-STIKs
- Instructions for Use

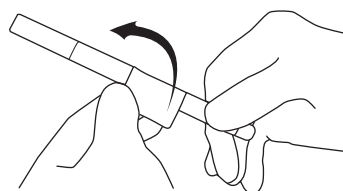

## ILLUSTRATED INSTRUCTIONS

**1**

Allow the unopened KWIK-STIK™ pouch to equilibrate to room temperature. Tear open pouch at notch and remove the KWIK-STIK unit.

**2**

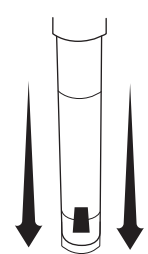

Tear off Pull-Tab portion on the label and attach it to primary culture plate or QC record. Do not disassemble the device during hydration.

**3**

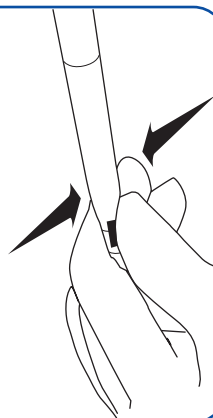

Over the edge of the work bench or counter, crack the ampoule at the top of the KWIK-STIK (just below the fluid meniscus of the ampoule) found in the cap to release the hydrating fluid.

**4**

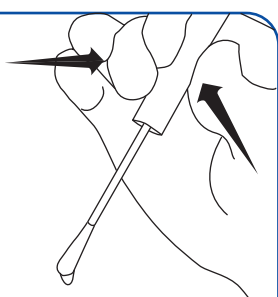

Hold vertically and tap on a hard surface to facilitate flow of fluid through shaft into bottom of unit containing pellet. Allow the hydrating fluid to flow through the swab shaft and into the bottom portion of the unit containing the pellet.

**5**

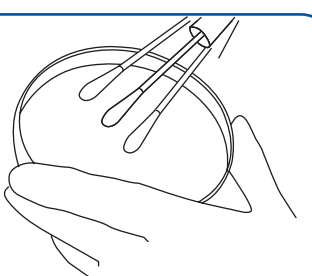

Using a pinching action on the bottom portion of the unit, crush the pellet in the fluid until the pellet suspension is homogenous.

**6**

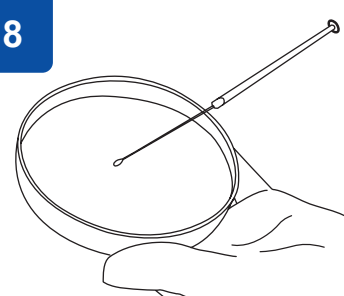

Immediately heavily saturate the swab with the hydrated material and transfer to agar medium, or use according to the laboratory's SOP.

**7**

Inoculate the primary culture plate(s) by gently rolling the swab over one-third of the plate.

**8**

Using a sterile loop, streak to facilitate colony isolation.

**9**

Using proper biohazard disposal, discard the KWIK-STIK.

**10**

Immediately incubate the inoculated primary culture plate(s) at temperature and conditions appropriate to the microorganism.

Fast, Convenient and Reliable  
QC Microorganisms for  
Growth Promotion Testing

## Highlights:

- Delivers 10-100 CFU per 0.1 ml as required by USP/Ph. Eur./JP
- Instant dissolve pellet reduces preparation time
- No dilutions required for simplified test procedure
- Up to eight hours stability allows for ultimate flexibility
- Refrigerated storage is easy and economical
- Online Certificate of Analysis provides detailed strain information
- Authentic, traceable strains at three passages or fewer from the reference culture – meets USP/Ph. Eur./JP requirements
- Technical Support experts available for guidance

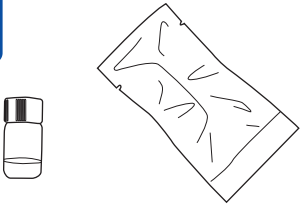

## Applications:

- Growth Promotion Testing
- Media Challenge Testing
- Suitability of Counting Methods
- Suitability of Sterility Tests
- Suitability of Tests for Specified Microorganisms
- Microbial Limits Testing
- Microbial Enumeration Testing
- Validation of Neutralization Methods
- Methods requiring a low CFU concentration

## Package Details:

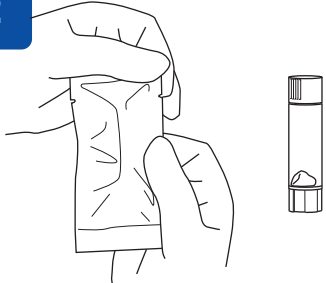

- Five vials of a single, quantitated microorganism (one lyophilized pellet per vial)
- Five vials of hydrating fluid (1.2 ml in each vial)
- Up to 50 tests per kit
- Instructions for Use

**1**

Remove 1 vial of hydrating fluid and 1 foil pouch containing lyophilized pellet from refrigerated storage. Allow unopened pouch and hydrating fluid to equilibrate to room temperature (about 30 minutes).

**2**

Tear open the foil pouch and remove the vial containing 1 lyophilized pellet.

**3**

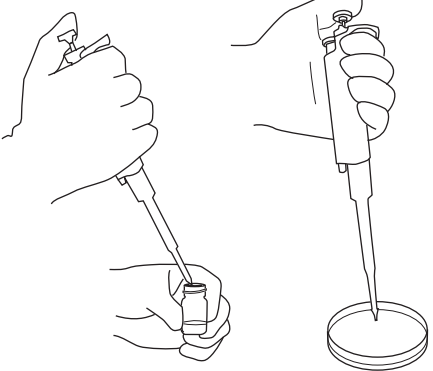

Remove the cap from the pellet vial and the hydrating fluid vial. Tip 1 pellet into the 1.2 ml vial of hydrating fluid. Only 1 pellet must be used to obtain the challenge concentration of 10-100 CFU per 0.1 ml on non-selective media. Immediately recap hydrating fluid vial.

**4**

Vortex hydrated material until pellet has completely dissolved and suspension is homogeneous.

**5**

With a sterile pipette, transfer 0.1 ml of the hydrated suspension of the material being challenged (0.1 ml contains 10-100 CFU).

Note: Remaining suspension can be refrigerated and used for up to 8 hours, with the exception of catalog numbers 0353A and 0484A, which must be used within 30 minutes. Test suspension immediately after removing it from refrigerator.

**6**

Proceed with the challenge procedure according to laboratory protocol. Refrigerate suspension at 2°C - 8°C if it will be used again. Discard any remaining hydrated material in accordance with the laboratory protocol for disposal of biohazard materials.

*Not intended for clinical use*

## Five Compendial Strains Plus *E. coli* for Growth Promotion Testing in One Convenient Kit

### Highlights:

- Delivers 10-100 CFU per 0.1 ml as required by USP/Ph. Eur./JP
- Kit includes the five USP compendial strains plus *E. coli* for Growth Promotion Testing
- Instant dissolve pellet reduces preparation time
- No dilutions required for simplified test procedure
- Up to eight hours stability allows for ultimate flexibility
- Ten tests for each microorganism per kit
- Refrigerated storage is easy and economical
- Online Certificate of Analysis provides detailed strain information
- Traceability to reference cultures ensures authenticity
- Technical Support experts available for guidance
- Strains are three passages or fewer from the reference culture

### Applications:

- Growth Promotion Testing
- Media Challenge Testing
- Suitability of Counting Methods
- Suitability of Sterility Tests
- Suitability of Tests for Specified Microorganisms
- Microbial Limits Testing
- Microbial Enumeration Testing
- Validation of Neutralization Methods
- Methods requiring a low CFU concentration

### Package Details:

- Six vials of six quantitated microorganism strains (one lyophilized pellet per vial)
- Six vials of hydrating fluid (1.2 ml in each vial)
- Up to 60 tests per kit
- Instructions for Use

## ILLUSTRATED INSTRUCTIONS

**1**

Remove 1 vial of hydrating fluid and 1 foil pouch containing lyophilized pellet from refrigerated storage. Allow unopened pouch and hydrating fluid to equilibrate to room temperature (about 30 minutes).

**2**

Tear open the foil pouch and remove the vial containing 1 lyophilized pellet.

**3**

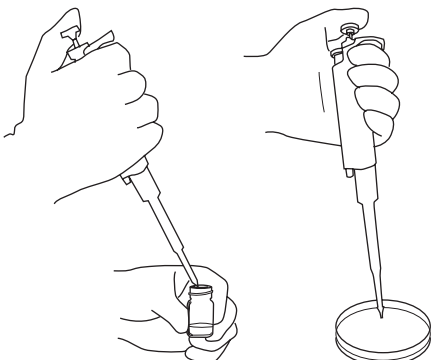

Remove the cap from the pellet vial and the hydrating fluid vial. Tip 1 pellet into the 1.2 ml vial of hydrating fluid. Only 1 pellet must be used to obtain the challenge concentration of 10–100 CFU per 0.1 ml on non-selective media. Immediately recap hydrating fluid vial.

**4**

Vortex hydrated material until pellet has completely dissolved and suspension is homogeneous.

**5**

With a sterile pipette, transfer 0.1 ml of the hydrated suspension to the material being challenged (0.1 ml contains 10–100 CFU).

Note: Remaining suspension can be refrigerated and used for up to 8 hours, with the exception of catalog number 0484A, which must be used within 30 minutes. Test suspension immediately after removing it from refrigerator.

**6**

Proceed with the challenge procedure according to laboratory protocol. Refrigerate suspension at 2°C–8°C if it will be used again. Discard any remaining hydrated material in accordance with the laboratory protocol for disposal of biohazard materials.

*Not intended for clinical use*

# EZ·CFU™ One Step

Ready-to-Use Quantitative  
QC Microorganisms for  
Growth Promotion Testing

## Highlights:

- Delivers 10-100 CFU per 0.1 ml as required by USP/Ph. Eur./JP
- No dilutions required for simplified test procedure
- Up to eight hours stability allows for ultimate flexibility
- 19 testing events per set-up, 190 tests per kit
- Refrigerated storage is easy and economical
- Online Certificate of Analysis provides detailed strain information
- Traceability to reference cultures ensures authenticity
- Technical Support experts available for guidance
- Strains are three passages or fewer from the reference culture

## Applications:

- Growth Promotion Testing
- Media Challenge Testing
- Suitability of Counting Methods
- Suitability of Sterility Tests
- Suitability of Tests for Specified Microorganisms
- Microbial Limits Testing
- Microbial Enumeration Testing
- Validation of Neutralization Methods
- Methods requiring a low CFU concentration

## Package Details:

- 20 quantitated lyophilized microorganism pellets
- 10 vials of hydrating fluid (2 ml in each vial)
- Instructions for Use

# EZ·CFU™ One Step ILLUSTRATED INSTRUCTIONS

1

Remove the vial of lyophilized pellets from refrigerated storage (2°C–8°C). Allow the materials to equilibrate to room temperature (about 30 minutes) before opening the vial.

2

While the pellets are equilibrating, prewarm the hydrating fluid to 34°C–38°C (at least 30 minutes).

3

With a sterile forceps, transfer 2 pellets into the 2 ml vial of hydrating fluid. Do not remove the desiccant from vial. Two pellets must be used to obtain the challenge concentration of 10–100 CFU per 0.1 ml on non-selective media. Immediately stopper and recap the pellet vial and return the remaining lyophilized material to refrigerated storage 2°C–8°C.

4

Immediately recap the vial with the hydrated material and place into a 34°C–38°C incubator for 30 minutes to ensure complete hydration.

5

Immediately following incubation, vortex the hydrated material until pellets have completely dissolved and suspension is homogeneous.

6

With a sterile pipette, transfer 0.1 ml of the hydrated suspension to the material being challenged (0.1 ml contains 10–100 CFU). Note: Remaining suspension can be refrigerated and used for up to 8 hours (no warming time required), with the exception of catalog number 0320Z which must be used within 30 minutes.

7

Proceed with the challenge procedure according to laboratory protocol. Discard any remaining hydrated material in accordance with the laboratory protocol for disposal of biohazard materials.

*Not intended for clinical use*

## Economical Quantitative QC Microorganisms for Growth Promotion Testing

## Highlights:

- Delivers 10-100 CFU per 0.1 ml following a 1:10 dilution step
- 900+ tests per kit, ideal for high volume Growth Promotion Testing
- Refrigerated storage is easy and economical
- Online Certificate of Analysis provides detailed strain information
- Traceability to reference cultures ensures authenticity
- Technical Support experts available for guidance
- Strains are three passages or fewer from the reference culture

## Applications:

- Growth Promotion Testing
- Media Challenge Testing
- Suitability of Counting Methods
- Suitability of Sterility Tests
- Suitability of Tests for Specified Microorganisms
- Microbial Limits Testing
- Microbial Enumeration Testing
- Validation of Neutralization Methods
- Methods requiring a low CFU concentration

## Package Details:

- 20 quantitated lyophilized microorganism pellets
- 10 vials of hydrating fluid (2 ml in each vial)
- Instructions for Use

1

Remove the vial of lyophilized pellets from refrigerated storage. Allow unopened vial of lyophilized pellets to equilibrate to room temperature (about 30 minutes).

2

While the pellets are equilibrating, prewarm the hydrating fluid vial and a tube of 9.0 ml of phosphate buffer pH 7.2 to 34°C–38°C (at least 30 minutes).

3

With a sterile forceps, transfer 2 pellets to the 2 ml vial of hydrating fluid. Do not remove the desiccant from the vial. Two pellets must be used to obtain the challenge concentration of 10–100 CFU per 0.1 ml on non-selective media. Immediately recap the pellet vial and return the remaining lyophilized material to refrigerated storage 2°C–8°C.

4

Immediately recap the vial with the hydrated material and place into a 34°C–38°C incubator for 30 minutes to ensure complete hydration.

5

Immediately following incubation, vortex the hydrated material until pellets have completely dissolved and suspension is homogeneous.

6

With a sterile pipette, transfer 1.0 ml of the hydrated suspension to the 9.0 ml tube of pH 7.2 phosphate buffer.

7

Vortex the working solution well.

8

With a sterile pipette, transfer 0.1 ml from the working solution to the material being challenged (0.1 ml contains 10–100 CFU).

9

Proceed with the challenge procedure according to laboratory protocol. The challenge must be completed within 30 minutes of hydration. Discard any remaining hydrated material in accordance with the laboratory protocol for disposal of biohazard materials.

*Not intended for clinical use*

# EZ·PEC™

Ready-to-Use, Affordable Quantitative  
QC Microorganisms for  
Antimicrobial Effectiveness Testing

## Highlights:

- Delivers 1.0 x 10<sup>5</sup> to 1.0 x 10<sup>6</sup> CFU per 1 ml of product tested
- Refrigerated storage is easy and economical
- Online Certificate of Analysis provides detailed strain information
- Traceability to reference cultures ensures authenticity
- Technical Support experts available for guidance
- Strains are three passages or fewer from the reference culture

## Applications:

- Antimicrobial Effectiveness Testing
- Preservative Efficacy Testing
- Applications requiring a high CFU concentration

## Package Details:

- 20 quantitated lyophilized microorganism pellets
- 10 vials of hydrating fluid (2 ml in each vial)
- Instructions for Use

1

Remove the vial of lyophilized pellets from refrigerated storage (2°C–8°C). Allow the materials to equilibrate to room temperature (about 30 minutes) before opening the vial.

2

While the pellets are equilibrating, prewarm the hydrating fluid to 34°C–38°C (at least 30 minutes).

3

With a sterile forceps, transfer 2 pellets into the 2 ml vial of hydrating fluid. Do not remove the desiccant from vial. Immediately stopper and recap the pellet vial, and return the remaining lyophilized material to refrigerated storage 2°C–8°C.

4

Immediately recap the vial with the hydrated material and place into a 34°C–38°C incubator for 30 minutes to ensure complete hydration.

5

Immediately following incubation, vortex the hydrated material until pellets have completely dissolved and suspension is homogeneous. Charcoal particles, which may be visible in the hydrated suspension, will not compromise challenge microorganism.

6

With a sterile pipette transfer a volume of hydrated suspension equal to 0.5% to 1.0% of the volume of the product being challenged. A 0.5% to 1.0% addition of microorganisms will automatically result in a concentration of 1.0E+05 to 1.0E+06 CFU per ml of product.

7

Proceed with the test according to laboratory protocol. The challenge must be completed within 30 minutes of hydration. Discard any remaining hydrated material in accordance with laboratory protocol for disposal of biohazard materials.

*Not intended for clinical use*

## Microbial Controls Made From Your Environmental Isolates

Tracking and trending environmental microbial isolates is a growing concern for pharmaceutical, nutraceutical, medical device, personal care product and food manufacturing laboratories. Microbiologics offers a comprehensive program for environmental isolate management. Our team of experts will identify, characterize, preserve and manufacture your strain into a test-ready control format for ongoing QC.

Partner with Microbiologics to reduce cost, minimize risk and increase confidence in your environmental monitoring program.

### Why Microbiologics?

- Over 45 years of experience developing and producing microbial controls
- Extensive range of simple and reliable qualitative and quantitative formats
- Independent external controls provide accurate, reliable results
- Convenient test-ready formats save you time and money
- Easy and economical storage, no freezing required
- Technical Support experts available for guidance
- Industry-leading quality system including ISO 17034 certification

## Applications

Using your environmental isolate, we manufacture test-ready controls to help you meet USP guidelines including:

- Antimicrobial Effectiveness Testing - USP <51>
- Aseptic Processing Environment - USP <1116>
- Disinfectant Qualification - USP <116>
- Growth Promotion Testing - USP <61>, <62>, <71>
- Suitability Testing - USP <51>, <61>, <62>, <71>
- Validation of Neutralization Methods - USP <1227>
- Water for Pharmaceutical Purposes - USP <1231>

## How It Works

- To get started, connect with our Custom Solutions team by filling out a contact form at [microbiologics.com/custom-solutions](https://microbiologics.com/custom-solutions) or emailing [custom@microbiologics.com](mailto:custom@microbiologics.com). We'll reach out to provide more information on our services and to learn about your testing needs.
- Next, complete the Custom Solutions Request Form including details about your strain and test applications. We'll send a quote within 48 hours for your review and approval.
- A shipping box will be sent to your laboratory containing the supplies required to send us your isolate.
- When your strain arrives at our facility, it will be identified, preserved and manufactured in an easy-to-use format that best meets the needs of your laboratory.
- Our turnaround time is typically 6-8 weeks from the time we receive your isolate.

## What's Included

- **Confidentiality:** All the strain information you share with us will remain proprietary.
- **Identification:** Your isolate will be identified phenotypically and genotypically.
- **Storage:** Our team will maintain stock cultures of your isolate for future use (banked at our headquarters).
- **Quality Guarantee:** Quality control will be performed on your custom controls prior to every shipment.
- **On-going Support:** If you have questions about your custom controls, our Technical Support team is available for guidance.

## Custom Biological Controls Designed for Your Assay and Your Customers

Microbiologics Business Solutions is a service division of Microbiologics focused on developing internal and external controls tailored to new or existing diagnostic assays in the market.

In collaboration with platform and assay manufacturers, the controls provided by Microbiologics Business Solutions accelerate commercialization, simplify customer guidelines, and ensure an independent third-party provider for verification and QC of your diagnostic assays.

## Why Microbiologics?

- We have developed and produced industry-leading products for over 45 years
- We are the leading experts in biological controls and possess the industry's highest accreditations
- We are easy to work with and agile to meet your continuously evolving requirements
- We are capable of delivering your products anywhere in the world through our vast global marketing and distribution system
- We are the only company with dedicated sales, marketing and technical support experts ready to answer questions and solve problems for you and your customers

Partner with Microbiologics to support assay development  
from conception through commercialization

### Manufacturing

- Custom manufacturing and packaging
- Scalable production capabilities
- FDA Registered Facility (CGMP)
- ISO 13485, ISO 17025 and ISO 17034

### Preservation

- Multiple options for refrigerated or room temperature storage
- Lyophilized pellets
- Liquid suspensions

### Formats

- Viable or inactivated organisms
- Synthetic nucleic acids
- Recombinant materials
- Singleplex or multiplex targets
- Ready-to-use packaging configurations

### Targets

- Sourced from various collections (e.g., ATCC<sup>®</sup>, FDA, CDC)
- Proprietary strains
- Fully authenticated bacteria, parasites, fungi and viruses

### Applications

- Sensitivity/Specificity
- Extraction/Amplification
- Presence/Absence
- Validation/Verification
- Proficiency/Training

### Control Types

- Internal and external QC
- Routine QC
- Customized panels for verification and/or validation

### Support

- Co-marketing/co-selling
- Global marketing and distribution

### Compliance

- CE Mark
- *In Vitro* Diagnostic (IVD)
- Certified Reference Material

The Microbiologics Business Solutions team of dedicated specialists is ready to design, develop and deliver custom biological controls that support your assay and meet your customers' needs.

Leverage our extensive expertise, state-of-the-art manufacturing capabilities and a powerful global distribution network to reduce your time to market and increase customer adoption.

## Customized Proficiency Testing Solutions for Your Lab

Proficiency providers and quality assurance/quality control managers share a common goal: to maintain the highest quality standards in the laboratories they serve and oversee.

With more than 45 years of experience in developing innovative biological controls, Microbiologics provides leading solutions for proficiency testing. We combine our extensive microbiology expertise and advanced molecular technologies to provide comprehensive solutions that support your proficiency testing program.

## Why Microbiologics?

- High quality, well characterized microorganisms
- Customized, flexible programs
- Broad range of control materials
- Strains from leading culture collections, customer submitted strains and additional strain material available upon request
- Certificate of Analysis and custom labeling available
- Susceptibility and statistical data available upon request
- Multiple markets serviced including clinical, food, water, beverage and cannabis
- Provide optional shipping and handling services that conform to IATA requirements with ability to support pre-scheduled, multi-site shipments

## Targets:

- Bacteria
- Fungi
- Parasites
- Viruses
- Antigens

## Applications:

- Microbial identification
- Enumeration methods
- Susceptibility testing
- Molecular programs

## Formats:

- Single strain or mixed culture
- Viable or inactivated organisms
- Synthetic nucleic acids
- Microscopy slides

Choose from common proficiency testing panels or partner with us to create customized testing solutions for your lab. Contact our Proficiency Solutions team at [proficiencyolutions@microbiologics.com](mailto:proficiencyolutions@microbiologics.com) to learn more.
