

RADIAL ARTERY INTRODUCER

Set with hemostasis valve to introduce and exchange catheters and endocavitary electrodes

Set components:

- sheath with a valve
- angiographic needle
- guidewire
- dilator

Lot 164.

The set contains a guidewire of special construction. The soft distal part of the guidewire enables its introduction to the vessel, and the stiff proximal part provides an excellent scaffold for the dilator, along with preventing vessel perforation. The distal part of the sheath and dilator is finished in a way that enables an easy and atraumatic introduction of the catheter to the vessel.

When ordering use Ref. Number, e.g.: INT5FKR.

Special order can contain introducer with radiopaque marker
 Model reference number: INT7FKRH – introducer with a marker.

Hydrophilic coating is available on request.
 Model reference number: INT7FKRH – introducer with a hydrophilic surface protection.
