Inginer Sisteme de Informatica

112 Moldova, Chisinau (Republica Moldova)
I participated and I continue to set up the IT system of the Unique Service for Taking Emergency

Departments 112 Moldova.

Main tasks:

Creating Microsoft BD statistics, setting up the CoordCom system and resqueMap for emergency and interactivity with SSUs,

Finished projects:

1. ParseCXELogs application.

Description:Its a desktop java application that parse logs from a Voice Gateway (CXE) , stored in text files .All calls initiated from all voice providers are transited trough this device.

Logs are read in real time perspective (with regex patterns) and inserted in DB.

After this, aplciation is able to query and to display useful information about sensitive emergency data.

Aplciation clients: management team.

2.CXESEMAFOR

Aplication is planned to check some services on Aplcation Server and in case of deficient work of them, is able to switch services to another backup application server. This application was born due to a bug not resolved yet by 112 aplcations server suppliers.

Aplication also offer possibility to interact with a dutty enigneer who wants to start/ query/stop services and to be sure that services are running properly.

3.TempCoordCom

This task is related to CXESEMAFOR.

It happened that twice AplicationServer stoped some features in order to answer emergency calls and to insert in database information about location , phone number and ID of callers.

In this case , task was to take over tasks from main board.

112 operators start **TempCoordCom** and are able to register critical emergency information an send them to police , ambulance dipetechers(actually the last ones are accesing in real time information from db in real time). Application is working with web services . WebSockets was very useful solution for this task.

3.WebTempCoordCom(will start in 2 weeks).

The main fuctionality will be the same, but it was my own decision to make this application a **web based one**.Spring and Hibernate are my goals to achieve with pratice and a good project and with social benefits(its not a risk to lose huge emergency calls amount due to malfunctioning of the main solution).
