### Project summary

The aim of software development project was to extend overall functionality of existing enduser webportal "My Pages/Mina Sidor" and the backend database "KAF – Online Database".

The goal was to develop and implement new functionalities as follows:

- Exporting functionality for customer specific/filtered information available in web view pages
  - exporting functionality was to support XLSx or CSV file formats
- Exporting functionality for customer specific accounting records following the BAS 2020 standard
  - new settings page was to be created for customer specific "Account plan settings"
  - mapping functionality of customer transaction types from KAF-Online business system according to customer defined "Account plan settings"
  - exporting of accounting records was to follow well-established SIE standard widely used by accounting applications and the Swedish tax authorities.
  - export was to support SIE5(XML), SIE4I(SI), Excel (XLS), Coma-separated (CSV) file formats
- Adapt/Modify/Customize the UI/UX for newly developed export functionalities
- UI/UX was to be developed with support for standard web-browsers as well as for mobile devices

**Main technologies:** ASP .NET, MVC, C#, JQuery, React, Razor View Engine, SQL Server

**Method & Tools:** Scrum, Jira, Bitbucket, Zeplin, Aspose
