McGRATH™ MAC Video Laryngoscope

One system

The McGRATH™ MAC device is a cost-effective video laryngoscope – so it’s within reach for every intubation. With disposable, sterile blades, and multiple cleaning options, it’s ready when you are.

Technical specifications

McGRATH™ MAC handle

Size	180 x 68 x 110 mm
Weight	180 g
Power	3.6v lithium battery pack (c. 250 minutes) with auto shutoff
Light source	High-intensity LED
Display	2.5 in. LCD color display
Camera	CMOS
Materials	Durable medical-grade thermoplastics composite with structural alloy core
Warranty	36 months

McGRATH™ MAC disposable blades

Material	Fog-free, medical-grade optical polymer
Packaging	Packaged sterile for single use

Shiley™ Oral/Nasal Endotracheal Tube with TaperGuard™ Cuff and Optional Preloaded Stylet

Features and benefits

- Taper-shaped cuff
- Depth marks above the cuff
- Hooded tip with Murphy eye
- Suitable for oral and nasal intubation
- Tip-to-tip X-ray line
- Available with or without preloaded intubation stylet

Metal-reinforced spiral to prevent kinking

[Learn more](#)

Shiley™ Oral/Nasal Reinforced Endotracheal Tube, Cuffed

Features and benefits

- Metal-reinforced spiral, uniformly and securely encapsulated in the wall of the tube, to help prevent kinking compared to traditional endotracheal tubes
- High-volume, low-pressure cuff
- Two depth marks above the cuff
- Reinforcement to support X-ray control and verification of tube position
- 15 mm connector bonded to the endotracheal tube
- Suitable for oral and nasal intubation
- Murphy eye

Flexible and kink resistant

Shiley™ Oral/Nasal Reinforced Endotracheal Tube, Cuffless

Features and benefits

- Highly flexible silicone tube material and reinforcement within the tube wall to help prevent kinking compared to traditional endotracheal tubes¹
- Marking on both sides of the tip
- Reinforcement to support X-ray control and verification of the tube position
- Fully inserted 15 mm connector
- Intubation stylet may be used for easier tube placement
- Suitable for oral and nasal intubation
- A bite block or guedel airway may be considered when using reinforced endotracheal tubes

Spiral bound stainless steel

[Learn more](#)

Shiley™ Laser Oral Endotracheal Tube, Dual-Cuffed

Features and benefits

- Laser-resistant, nonflammable, flexible stainless steel tube for ventilation during CO₂ and KTP laser surgery of the laryngeal/tracheal area
- Accidental contact between tube shaft and laser beam results in reflection of a defocused beam¹
- Airtight steel spiral design
- 15 mm connector bonded to the endotracheal tube
- Dual cuffs of extra large diameter with individual inflation lines
- Pilot balloons with self-sealing valves marked "proximal" and "distal"
- Murphy eye
- Distal tip made from soft plastic PVC material
- Both cuffs may be filled with isotonic saline to help facilitate protection during laser surgery

For left side single lung isolation

Shiley™ Endobronchial Tube, Left, with Polyurethane Cuff

[Learn more](#)

Features and benefits

- For left-sided endobronchial intubation when differential or one-lung ventilation is indicated during thoracic surgery or intensive care
- Polyurethane endotracheal cuff for a much higher puncture strength than conventional materials¹
- Blue bronchial cuff may assist in identifying the distal tip when verifying correct placement by a fiber-optic bronchoscope
- Slightly curved bronchial tube tip to help improve placement in left main bronchus
- X-ray opaque markers at distal tip, above bronchial cuff, and at tracheal opening to aid location and verification of tube position
- Also available with X-ray opaque carinal hook for precise location of the endobronchial tube within the carina
- Accessory pack contains two swivel connectors, two endobronchial suction catheters, and one "Y" connector.

Emergency solutions

Emergency airway access

[Learn more](#)

Shiley™ Esophageal Tracheal Airway, Double Lumen, Cuffed

When establishing a difficult airway, time and accuracy are critical. Unlike traditional endotracheal tubes, the Shiley™ esophageal tracheal airway, double lumen is designed to establish a nonsurgical patent airway when placed in either the trachea or the esophagus.

Features and benefits

- Special double lumen may establish an effective airway through either esophagus or trachea
- Pharyngeal balloon inflates and is designed to hold device firmly in place and help prevent the escape of gas through nose or mouth
- Full-length lumen may enable suctioning of gastric contents with no interruption of patient ventilation if esophageal tracheal airway is placed in esophagus
- Esophageal cuff inflates to seal the esophagus to help prevent gas from entering the stomach and gastric contents from being aspirated
- Appropriate for pre-hospital, surgical, and emergency use
- Tip-to-tip X-ray line
- Esophageal/tracheal double-lumen airway fits an array of patients
 - Size 37 for patients 4' (122 cm) to 5' 6" (183 cm) tall
 - Size 41 for patients 5' (152 cm) tall and above

Tracheostomy solutions

Designed for the distinct anatomy of neonate and pediatric airways

[Learn more](#)

Shiley™ Flexible Neonatal and Pediatric Tracheostomy Tubes

Features and benefits

- Distinct flange designed specifically for neonatal or pediatric patients
- Transparent, soft flange, supports patient comfort and visualization of the skin below
- Raised outer flange eyelets for easier access when inserting the tracheostomy tube holder/tape
- Comfort recess on the bottom of the connector to help reduce stoma irritation
- Available in cuffless and cuffed configurations. The low profile (low volume), low pressure TaperGuard™ cuff:
 - Reduces fluid leaks by 94.8% at intracuff pressures of 20 cm H₂O[†]
 - Significantly improves management of airway leaks at pressures below 25 cm H₂O[†]
 - Reduces removal force by 58.3%, reducing the potential for stoma damage during removal^{††}
 - Integrated 15 mm connector

[†]Compared to earlier generation Shiley™ tracheostomy tubes.

^{††}Applicable to cuffed product only.

1. Based on internal testing. Comparative ventilator air leak test performed using the Shiley™ 4.0PCF and 6.5PLCF pediatric tracheostomy tubes with taper-shaped cuff vs. predicate Shiley™ 4.0PDC and 6.5PLC pediatric tracheostomy tubes with barrel-shaped cuff.

Same trusted brand, clinician-inspired advanced design

[Learn more](#)

Shiley™ Flexible Adult Tracheostomy Tubes

Features and benefits

- Available in cuffless and cuffed configurations. The TaperGuard™ cuff:
 - Reduces fluid leakage by 99%^{1†}
 - Exerts 18.6% less lateral wall pressure on the trachea^{2†}
- New beveled tip design:
 - Reduces insertion force by 39% with a thinner, less bulky cuff^{3†}
 - Eases percutaneous insertion
- Transparent, soft, flexible flange:
 - Conforms to patient's anatomy
 - Promotes airflow around the stoma
 - Reduces skin contact with a recessed flange
- Mechanical ventilation and faster weaning:
 - Titrates ventilator air leaks with 65% greater ability^{4†}
 - Increases airflow around the outer cannula by an average of 242% when the cuff is deflated^{3†}
- Smooth, continuous curvature enables proper positioning
- 15 mm connector is integrated into the outer cannula to enable ventilation with or without an inner cannula

Carton quantity: 1

All tubes are delivered sterile packed, for single use only.

†Compared to earlier generation Shiley™ tracheostomy tubes.

††Applicable to cuffed product only.

1. Internal benchtop testing results. Results reflect testing the Shiley™ Flexible adult tracheostomy tube with TaperGuard™ cuff, disposable inner cannula versus the Shiley™ DCT tracheostomy tube with disposable inner cannula at the same cuff pressure of 25 cm H₂O. 2. Internal testing results. Results reflect measurements taken for size 7.5 Shiley™ Flexible adult tracheostomy tube compared to the Shiley™ 6DCT tracheostomy tube at the same cuff pressure of 20 cm H₂O. 3. Based on internal testing comparing the Shiley™ Flexible adult tracheostomy tube with TaperGuard™ cuff to the Shiley™ DCT tracheostomy tube cuffed. 4. Internal benchtop testing results. Results reflect the Shiley™ Flexible adult tracheostomy tube with TaperGuard™ cuff, disposable inner cannula tubes ability to titrate / control ventilator air leak in comparison to the Shiley™ tracheostomy tube cuffed with disposable inner cannula (DCT).

Integrated evac technology

[Learn more](#)

Shiley™ Flexible Evac Tracheostomy Tubes with TaperGuard™ Cuff Technology

Features and benefits

- Integrated evac lumen enables removal of secretions from subglottic spaces
- Removes aspirates an average of four times more efficiently than the legacy Hi-Lo evac product
- May help protect the lungs from VAP or other HAI by allowing subglottic secretion drainage from above the cuff.¹
- The suction portal is located close to the cuff, allowing for effective secretion removal.
- The evac lumen cap has the same design and color-coding as other Shiley™ secretion drainage management products, indicating secretion removal capability.
- Designed with a slightly larger outer diameter† to support the evac lumen for secretion removal
- Available in single cannula, reusable inner cannula, and disposable inner cannula configurations

*Compatible only with the disposable inner cannula version.
†Compared to standard Shiley™ flexible adult tracheostomy tube

1. Internal benchtop test #10122514. Results reflect the Shiley™ flexible adult tracheostomy tube with TaperGuard™ cuff, disposable inner cannula tubes' ability to titrate/control ventilator air leak in comparison to the Shiley™ tracheostomy tube cuffed with disposable inner cannula (DCT).

Extended length for patients who need it

[Learn more](#)

Shiley™ XLT Tracheostomy Tubes

Patients with a greater distance between skin and tracheal wall – as well as those with long tracheal anatomies – may require extra-long tracheostomy tubes in order to achieve a proper fit. With extra length in the proximal or distal portions, the Shiley™ XLT tube accommodates different anatomical challenges.

Features and benefits

- Choice of distal or proximal extensions:
 - Extended-length, cuffless tracheostomy tube with extra length in proximal portion
 - Extended-length, cuffed tracheostomy tube with extra length in proximal portion
 - Extended-length, cuffless tracheostomy tube with extra length in distal portion
 - Extended-length, cuffed tracheostomy tube with extra length in distal portion
- Extended-length, disposable inner cannula with integral 15 mm twist-lock connector
- Smooth, rounded-tip obturator facilitates insertion
- Flexible inner and outer cannula and high-volume, low-pressure cuff

Shiley™ XLT tube with proximal extension (XLTCP or XLTUP)

Shiley™ XLT tube with distal extension (XLTCB or XLTUD)

For breathing through the upper airway

[Learn more](#)

Shiley™ Adult Fenestrated Tracheostomy Tubes

Features and benefits

- Allows for increased airflow and helps permit patients to breathe through the upper airway
- May support the ability to cough, speak/phonate, and wean more effectively
- Soft-swivel opaque flange moves with the patient
- Smooth, rounded tip obturator facilitates insertion
- Not made with natural rubber latex
- Available in four configurations:
 - DFEN: High-volume, low-pressure cuff with disposable inner cannula
 - DCFN: Cuffless with disposable inner cannula
 - FEN: High-volume, low-pressure cuff with reusable inner cannula
 - CFN: Cuffless with reusable inner cannula
- DFEN and DCFN products feature:
 - Disposable inner cannula with an integral 15 mm snap-lock connector
 - Disposable decannulation plug (DDCP)
- FEN products feature:
 - Reusable inner cannula with an integral 15 mm twist lock connector
 - Decannulation plug (DCP)
- CFN products feature:
 - Reusable inner cannula with an integral 15 mm twist lock connector
 - Inner cannula with open or closed lumen and low-profile connector that reduces bulk at stoma (not adaptable to ventilator equipment)
 - Decannulation plug (DCP)

DFEN

With disposable inner cannula, obturator, and disposable decannulation plug

DCFN

With disposable inner cannula, obturator, and disposable decannulation plug

FEN

With reusable inner cannula, fenestrated inner cannula, obturator, and decannulation plug

CFN

With reusable inner cannula, inner cannula with low-profile connector, fenestrated inner cannula, obturator, and decannulation plug

Patient support for total laryngectomy

Shiley™ Laryngectomy Tubes, Cuffless

Features and benefits

- Made with high-quality, compliant material
- Comfortable, convenient alternative to metal tubes
- Inner cannula with an integral 15 mm twist-lock connector permits connection of ancillary equipment and is translucent for easy inspection
- Inner cannula with open lumen and low-profile connector reduces bulk at stoma (Caution: Low profile inner cannula is not adaptable to ventilator equipment.)
- Inner cannula with closed lumen and low-profile connector, which directs breathing through the upper airway
- Smooth, rounded-tip obturator facilitates insertion

LGT

With inner cannula, inner cannula with open lumen, inner cannula with closed lumen, and obturator

Airway accessories

OR solutions accessories

Shiley™ Nasopharyngeal Airway

[Learn more](#)

Features and benefits

- Provides an open airway that is designed to make suctioning and bronchoscopy easier, safer, and less traumatic
- Material is extra soft for patient comfort and helps to minimize patient coughing and gagging
- May provide protection to mucosa in patients requiring repeated catheter passage during procedures or nasotracheal suctioning
- Can be placed in the conscious and semiconscious patient without causing the patient to gag
- Size markings on flange
- Thin wall construction enables a large inside diameter
- Non-adjustable nasopharyngeal airway flange

Shiley™ Intubating Stylet

[Learn more](#)

Features and benefits

- Made of malleable aluminum covered with a plastic sheath in lubricated Satin-Slip™ surface
- Use of the stylet helps to maintain the shape of the endotracheal tube during intubation
- Sheath helps reduce friction between stylet and endotracheal tube insertion and withdrawal
- Sheath extends beyond the tip of the endotracheal tube, reducing the potential risk of trauma to the patient

Nellcor™ Colorimetric Adult and Pediatric CO₂ Detectors

Features and benefits

- Attaches directly to an endotracheal tube to indicate exhaled CO₂ levels during intubation for up to two hours
- Responds quickly to exhaled CO₂ with a simple color change from purple to yellow
- Features an easy-to-see display window that provides constant visual feedback with breath-to-breath response
- Aids in the assessment of CPR effectiveness
- May help verify that patients are properly intubated right from the start – and that they stay that way during transport¹
- Provides an easy, economical way to assess exhaled CO₂ during airway management¹

Tracheostomy accessories

Shiley™ Speaking Valves

[Learn more](#)

Features and benefits

- Facilitates vocalization for alert, awake patients who are independently breathing
- Available with (SSVO) or without (SSV) a supplemental oxygen port cap
- Connects to any 15 mm tracheostomy tube connector
- Directs airflow past the vocal cords, helping patients speak without finger occlusion
- Hinged cap for easy cleaning
- Lightweight material may help reduce additional pressure on stoma site

Ordering information

CFN	Description	Quantity per carton
SSVO	Speaking valve for use with low-flow oxygen port	1
SSV	Speaking valve	1

Shiley™ Tracheostomy Tube Holder

[Learn more](#)

Features and benefits

- Securely holds a tracheostomy tube in place
- Convenient alternative to tape
- Fits most patients, from pediatric to adults
- Soft, foam-padded cotton material provides patient comfort
- Wide band may promote good skin care
- Band tapers at hooks to help reduce excess secretion accumulation

Ordering information

CFN	Description	Quantity per carton
TTH	Tracheostomy tube holder for pediatric and adult	10

ICU solutions accessories

[Learn more](#)

DAR™ Filters

Features and benefits

- Minimize the spread of infection and the risk of cross-contamination by removing pathogens before they enter the airway and as they are exhaled
- Heat and moisture exchangers (HMEs) provide humidification by adding heat and moisture to the inspired air
- Electrostatic filters use positive and negative charges to attract and capture particles
- Mechanical filters feature a multilayered, pleated filtration medium for greater efficiency compared to electrostatic filters¹ and protect against microbes as small as 0.02 μ
- Low resistance to airflow reduces work of breathing
- ISO standard 15 mm and 22 mm fitting connects to breathing circuit

Ordering information

CFN	Description
352U5805	Adult-pediatric electrostatic filter HME, large
352U5996	Adult-pediatric electrostatic filter HME, small, angled port

DAR™ Tracheolife II Heat and Moisture Exchanger (HME)

Features and benefits

- For use on tracheostomy patients who can breathe spontaneously
- Oxygen port positioned to allow heating and humidification of all inspired gases
- Collection chamber ensures functionality is not compromised in the presence of sputum
- Central port allows suctioning and sampling to be performed without removing the HME
- ISO standard 15 mm fitting

DAR™ Hygrolife II HME

Features and benefits

- For use with ventilated patients
- Hygroscopic HME media traps patient's own moisture and reduces heat loss
- Low airflow resistance
- End tidal CO₂ port offers easy access to airway gases
- Moisture output greater than 30 mg H₂O/L
- ISO standard 15 mm and 22 mm fittings

DAR™ Tracheolife III HME

Features and benefits

- For use on tracheostomy patients who can breathe spontaneously
- Oxygen port enables oxygen supply simply by connecting an O₂ line
- Membranes located on both sides (t-shape)
- Lightweight, compact design
- 15 mm connector with tracheostomy tube

DAR™ Double Swivel Connector

Features and benefits

- For use with tracheostomy and endotracheal patients to reduce the trauma associated with movement of the circuit connection
- Double swivel connector moves with the circuit to reduce torque on the tube
- Port with cap allows access for bronchoscope and suction catheters
