Diluid* Erma

Intended use

Diluid* Erma is a specially filtered, non-sterile blood diluting fluid for use in cell counting and sizing. The reagent is designed for automated instrumentation, capable to monitor a three-part WBC differential, based on the aperture impedance principle and electronically adjusted to operate at an osmolality of 330 ± 20 mOsm/kg. Diluid* Erma should be used in combination with Cymet* ERMA III Diff and Lyzeroglobin* PCE.

Summary and principle

The reagent is used to dilute whole blood prior to counting and sizing of RBC, PLT and WBC. Content of the reagent maintains stability of RBC, PLT and WBC during counting.

Content: Diluid* Erma is water based and contains: NaCl, Na_2SO_4 , procaine HCl and preservatives in an inorganic buffer compound.

Warning and precautions

Harmful if swallowed. Avoid contact with eyes, skin and clothing.

Storage and stability: Diluid* Erma is stable for three years at $18-30^\circ\text{C}$.

Indications of deterioration

There are no visible deteriorations; otherwise the reagent shouldn't give optimised performance. The reagent can be used through out shelf life, giving optimised performance. No guarantees to reagent performance are given after the expiry date.

Instructions for use

Diluid* Erma should be used undiluted according to instrument manufacturer's instructions for use and should be connected as listed in the Operators manual. Reagent may be used with Hypochlorite 0.5% or Proclean* as a cleaning agent. Furthermore reagent may be used with next lysing reagents: with Cymet* ERMA III Diff and Lyzeroglobin* PCE.
