BOJIN MEDICAL

Product Brochure - Orthopaedics
80 Countries and Counting - Bojin

Introduction

Shanghai Bojin Electric Instrument & Device Co., Ltd is a scientific research enterprise that has strong product development and production capabilities. The company was established in 1993 by Mr. Wang Xijiong and mainly develops, manufactures, and sells medical devices and equipment. We specialize in orthopaedic surgical products and have predominantly designed and produced medical electric drills, portable x - ray fluoroscopy device and fracture therapeutic equipment. Bojin has a dedicated global sales team supported by customer focused service and management departments. Bojin adheres to the principle of "quality and innovation." Customers all over the world appreciate our products and the dedication we have to surgical practice and best clinical outcomes. Bojin strives to improve technological advancements to streamline production and manufacturing process as well as develop new products to better serve our customers.

Certification "3C"

Certification ISO9001

Certification ISO13485

Certification "CE"

FDA 3008787426

COMPANY PROFILE

Bojin is a leading manufacturer and supplier of medical devices globally and employs a growing number of over 200 highly skilled staff professionals. The business is predominately focused on the orthopaedic medical device sector and has achieved market acceptance in many countries across the globe. The business plan for the company is to expand operations and product placement of Bojin's precision device technologies throughout the world.

Bojin is committed to the design, development and manufacture of innovative medical solutions that benefit the healthcare industry for best surgical outcomes. Customer, product support and service, education, dedication, passion, supply chain solutions and innovation thinking are the driving forces of Bojin's company vision. We believe that this ethos will add value and benefit our customers becoming a natural selection to health care communities in their decision-making processes.

Bojin is the owner and licensee of some of the most innovation design features that the surgical power tool and accessories industry has seen for decades. Bojin's compliment of patented technology includes cutting tools and accessories that our competitors are unable to compete with, we believe that Bojin holds the future for surgical power tools and accessory technology that will revolutionize and surpass current technology and supply chain solutions.

Bojin was founded in China in 1993 and currently holds it's global headquarters in Shanghai however its reach into the global medical community is widely experienced. Bojin is a global organization that services 80 countries across the globe. The appreciation of our products begins with adding value to medical teams so that surgical intervention may be conducted efficiently and affordably. It may be a surprise to the western medical community that Bojin is the largest supplier of power tools and accessories in China, a market that medical standards and sales volumes are growing faster than any other market in the world. Bojin is exceeding in the delivery of our products to the Chinese market, successfully supporting this growth. We believe that with this backbone and solid history the company is well positioned to afford the same level of support and delivery to a wider audience within the global medical market place.

Bojin's plan is to continue to innovative and develop products that will enhance user experience of medical teams for best patient recovery and surgical outcomes. Our users are the lifeblood of the company. Our customers are already partnered with a new wave of innovative designs that will become part of the future of healthcare solutions.

Our management team is comprised of highly skilled, dedicated, hard working professionals that understand the evolving medical supplies markets, and the requirement for quality coupled with affordability. Our global team is able to communicate and resolve quickly product issues that may contribute to the operating theater down time, ensuring that Bojin is contributing to equipment delivery, support and ultimately efficient function of health care solutions. Bojin believes that this philosophy is a key to ensuring hospitals run and operate precisely and efficiently, importantly reducing the possibility of costly delays in performing surgical intervention for patients.

Customer support is a major factor in supply chain solutions for the health systems globally. We strive to streamline our healthcare solutions without shortfalls or costly delays. Our plan is to set up strategically positioned global hubs to support our products that will ensure that operating room time will not be compromised.

We ask you to join us in our vision and become part of a range technologically advanced products and solutions that will ensure surgical success stands as a trusted tradition with all things associated with the Bojin brand.

Bojin currently has 8 product series and more than 100 types of products which are widely used in the orthopaedic surgical field. 3C, ISO9000, ISO13485, CE make and FDA approval.

SYSTEM 4300

- Separate battery
- Light weight hand piece
- 20% higher torque than BJ4100 system
- Single - function 155 °C autoclavable

Power Tools

BJJ-1	BJ4301	Sagittal Saw
BJZ-1	BJ4302	Bone drill
BJZ-1	BJ4303B	Dual - function cannulated drill
BJZ-1	BJ4307B	Acetabulum reaming drill
BJZ-1	BJ4309	Reciprocating saw

Double - layer sterile case

BOJIN cutting tool applications

Orthopaedic / Trauma

- Osteotomy saw blades
- Knee joint saw blades
- Twist drill bit
- Medullary reamer
- Acetabulum reamer

Spine Surgery / Neurosurgery

- Cutting drill bit
- Diamond drill bit
- Cranial milling

Maxillofacial Surgery

- Cutting drill bit
- Diamond drill bit
- Micro saw blades

AO Twist drill bit

- High gain, high sensitivity, and high resolution image intensifier
- Safe operation any time without the darkroom protection
- Low radiation dose
- Compatible with monitor and computer

BJI-2J2

Portable lightweight for multiple applications:

- Fracture
- Work place
- Womens health
- Industrial crack detection
- Veterinary
- Scientific research

- BJI-2J compatible with computer, save image and video separately.

BJK Fracture Therapeutic Instrument

BJK-2
Multi - style function

- Splint plaster fixing or external fixation
- Automatically adjust electromagnetic field
- Alternating electromagnetic field frequency and intensity
- Advanced focal electromagnetic design
- Digital control safe and reliable

Applications:

- Treatment of inflammatory disease
- Fracture treatment
- Increase blood circulation
- Accelerate bone healing
