

Introduction

Blood collection tubes are used for collection and packaging of blood samples for biochemical and immunological examinations in medical tests, and are used in clinical medical experiments using human venous blood as samples. According to the different objects of blood samples, blood collection tubes are divided into serum blood collection tubes, plasma blood collection tubes and whole blood collection tubes.

Features

- The tube body is made of PET material or glass material, with stable properties;
- The head cap is safe, with good air tightness, small puncture force, and convenient opening and capping;
- The inner wall is extremely smooth and be evenly coated by additive, to ensure the blood samples fully contact after entering the tube;
- Good compatibility, can match the transmission device of various biochemical, immune, blood and other analyzers;
- Labels can be customized according to customer needs.

Serum Blood Collection Tube

Serum blood collection tubes are designed to provide uncontaminated, undifferentiated raw blood samples for medical testing. After centrifugation, serum can be effectively separated from blood cells and fibrin. Serum tube includes 3 tubes: Plain tube with red cap, Clot Activator tube with red/orange cap, and Gel & Clot Activator tube with yellow cap.

Plain Tube, Red Cap

Plain tubes also called No Additive tube, which is used for collection and packaging of blood samples such as medical testing, biochemistry, immunology, serology, various virus detection, blood bank inspection, etc. Plain tube can maintain the normal composition of serum for a long time and facilitate the re-examination of serum with good repeatability.

Clot Activator Tube, Red/Orange Cap

Clot Activator tube, also known as pro-coagulant tube, is used to collect serum samples for biochemical and immunological testing, and can be used for rapid outpatient, emergency serum biochemical tests. The inner wall is extremely smooth and be evenly coated by coagulant. It has a wide operating temperature range. Blood clots completely within minutes, and centrifugation yields high quality serum.

Whole Blood Collection Tube

Whole blood collection tubes are designed to provide uncontaminated, undifferentiated raw blood samples for medical testing. Whole blood collection tube includes 2 kinds of tubes: EDTA tube with purple cap and ESR tube with black cap.

TYK110-212

TYK113-213-3

TYK213-1-213-2

EDTA Tube, Purple Cap

EDTA tubes are used for clinical hematology examinations, blood typing and cross-blood mixing and so on. It can comprehensively protect blood cells, effectively prevent platelet aggregation, and protect blood cells in shape and volume for a long time. EDTA anti coagulated plasma is used for molecular biological identification of parasites, bacteria and pathogenic microorganisms.

ESR Tube, 3.8% Sodium Citrate, Black Cap

ESR tubes are mainly used for blood sample collection and anti-coagulation during erythrocyte sedimentation rate test. It contains 3.8%(0.129mol/L) sodium citrate buffer which mixed with blood in a ratio of 4:1. It is suitable for ESR testing for different genders and ages. 8x120 ESR tube is applicable to various automated erythrocyte sedimentation rate analyzers. Because of little volume and negative pressure inside the tube, it needs some time for blood collection. Wait for the blood to stop flowing into the blood collection tube and mix it 6-8 times to fully mix the anticoagulant and blood. 13x75 ESR tube is specially used in blood collection and anti coagulation for automated erythrocyte sedimentation rate analyzers sedimentation rate test with the mixing ratio of 1 part sodium citrate to 4 parts blood, by Westergren method.

Plasma Blood Collection Tube

Plasma blood collection tubes are designed to provide uncontaminated, undifferentiated raw blood samples for medical testing. Plasma can be effectively separated from blood cells after centrifugation. Plasma tube includes 5 kinds of tubes: PT tube with blue cap, Heparin tube and Gel&Heparin tube with green Cap, Glucose tube with gray cap, Compound of Sodium Fluoride and Anticoagulant tube with gray cap.

PT Tube , 3.2% Sodium Citrate, Blue Cap

PT tube is used to obtain plasma samples for the coagulation test. It contains 3.2%(0.109mo/L) buffered sodium citrate solution. Blood and sodium citrate are mixed in a ratio of 9:1, and the ratio is accurate to ensure the validity of the test results. Due to the low toxicity of sodium citrate, it is also used for blood preservation.

Heparin Tube, Green Cap

Heparin tube is used for the collection of blood samples for clinical plasma biochemical and blood rheology determination, without affecting the volume of red blood cells and causing hemolysis. Inside the tube wall, where is well sprayed with lithium heparin or sodium heparin which is a kind of anticoagulant activating antithrombin to block the coagulation cascade reaction. The operating temperature range is wide, the plasma separation speed is fast, and the compatibility with serum specimen indicators is strong. In addition to the characteristics of heparin sodium, lithium heparin can also be used for the detection of trace elements. Plasma separation gel can be added according to customer requirements to prepare high quality plasma to meet the needs of clinical experiments.

Gel and Heparin Tube, Green Cap

Gel and Heparin tubes are anticoagulant tubes used to obtain high quality plasma samples for rapid emergency biochemical testing. It contains Heparin Sodium or Heparin Lithium and Gel at the bottom of the tube, which is used to separate plasma and blood cells. The exchange of substances can be prevented, so that the obtained plasma is free from blood cell contamination, making the results accurate. In this way, samples can be placed directly into the equipment to meet the quality requirements for re-inspection.

Product Usage

Microcentrifuge tube is a small centrifuge tube, which is used in conjunction with a micro centrifuge for the separation and centrifugation of trace reagents, and is widely used in the field of life sciences and clinical trials.

Features

- Full range volumes from 0.1ml to 10ml, apply to different solutions;
- Different bottom shapes and cap types for various testing purpose;
- Various Colors can be customized for distinguishing different samples;
- Made of high quality polypropylene raw material, enables excellent view of tube contents;
- Clear mold graduation and big writing area makes easy reading and recording (for 0.5ml-10ml);
- Tight and leak-free seal can open easily, even with gloves;
- Withstand high centrifugal forces;
- Bulk pack, RNase DNase DNA Free, EO sterilization are optional.

Serological pipette

Stretched Tip & Welded Tip

With Filters and color codings

Individual Blister Packing

TYC701-TYC706

Product Usage

Serological pipette mainly used for accurate measure or transfer for certain volume liquid and is widely employed in the field of cell culture, bacteriology, clinical research, etc.

Features

- Made of high-grade polystyrene (GPPS);
- Graduations are calibrated within $\pm 2\%$;
- Smooth and clean without drawing lines;
- Different colors correspond to different specification, easy to distinguish;
- Clear and simple graduation, makes the liquid drawing and reading easier;
- All serological pipettes are assembled with high quality filters;
- Free of DNAses, RNAses, DNA and PCR inhibitors, non-pyrogenic.

Pipette

Single Channel Pipette

TYC801-TYC911

Product Usage

Pipettes are devices for transporting traces of liquid, especially measured amount, which is commonly used in the areas of chemistry, biology, and medicine.

With various designs in terms of levels of precision, pipettes serve for different purposes. Our pipettes features as accuracy, user-friendly simple calibration and fast transporting.

The ergonomically designed pipette is light in weight, its digital volume display and integrated ejector contribute to the quick and easy replacement of tips. Due to its compatibility with widely used standard pipette tips, it is often the favorite choice of labs.

Features

- The wide range of Volume: 0.1ul to 10 ml;
- Precise setting: volume can be perfectly identified due to digital display;
- High comfort: the low force required when comparing the same range of pipettes to complete the draining force (must press the bottom), The less force means the lower the risk of finger damage caused by long-term use;
- Easy and quick calibration and repair: with accessory tools;
- Tip ejector: perfectly designed for narrow tubes;
- Tip cone is autoclavable.
- Packing: 1pc/box, 50pcs/carton;

Product Usage

Pipette Tips are disposable accessory for the uptake and dispensing of liquids by using a pipette. They are mainly used in any molecular biology or genetic research application in laboratory.

Features (Economic Type)

- Made of medical grade polypropylene material. Suitable for molecular biology experiments.
- Full range of volumes from 10ul to 10ml, apply to different solutions.
- With good transparency, easy to observe the liquid level when using.
- Universal design, compatible with most famous pipettes like Gilson, Eppendorf etc.
- Non Sterile, RNase DNase DNA Free, EO sterilization are optional.
- Available with different packing types according to requirements, like bag packing, rack packing, stack packing.

Product Usage

Filter Pipette tips are single-use laboratory consumables made from polypropylene and are also with an aerosol barrier filter made of polyethylene. It provides an effective protective structure between the pipette and the sample to eliminate the risk of cross-contamination between the specimen and the micropipette. The filter pipette tips are mainly used in laboratory, hospital, and other research center.
