

CHIRALEN

CHIRALEN is a non-absorbable, monofilament suture made of polypropylene. The thread is hydrophobic and is not subject to degradation by tissue enzymes.

Chiralen has a smooth, non-porous surface, that guarantees a clean and smooth passage through the tissue, optimal elasticity, good elongation properties and high visibility. In tissues, it can cause a minimal acute inflammatory reaction.

Indication: All surgical specialities, especially Cardiovascular, Plastic, Reconstructive, Ophthalmic, Orthopaedic and Traumatology (e.g. tendons).

Contraindication: Chiralen must not penetrate into the inner parts of the digestive and urinary tracts.

Chemical Composition: Polypropylene

Sizes: 10/0 to 2 USP

Structure: Monofilament

Absorption method: Non-absorbable

Colour: Blue and Black
