Nylon Flocked Swab 咽拭子

NYLON FLOCKED SWAB

Material
Stick: ABS Tip: Nylon Flocked

The perpendicular nylon fibres create a soft brush, increasing collection of cell samples. Brush-like texture rapidly and efficiently dislodges cells and collects them between the fibres. Capillary action between the strands facilitates strong hydraulic uptake of liquid sample. The close, perpendicular strands allow for easy sample penetration into the swab.

Collecting large amount of the cells
Rapid 95% elution and release of the specimens
Molded breakpoint design in swab handle
Free of any PCR inhibitors and interferences

DISPOSABLE SYRINGE

SIZE: 1ml/LUER LOCK
