

Liga²® ***Titanium Ligating Clips***

TITANIUM

Reliable Ligation

Ligating Clips

LigaV[®]

LigaV[®] Ligating clips are implantable medical devices. They are widely used in surgery for marking and ligating purposes. Medical practitioners value the product for its hemostatic features.

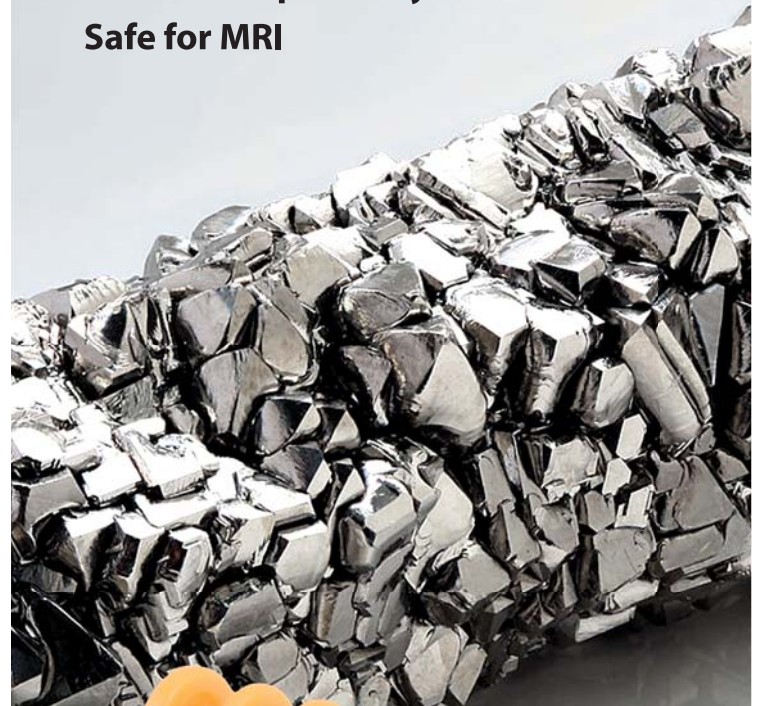

LigaV[®] manufactured by Grena Ltd., comes with inner and outer serration which enhances its function. The outer serration helps to grip the clip in the applicator's jaws; the inner serration enables its proper nourishment.

The product is offered in 4 standard sizes ensuring every user will be able to find appropriate clip for the given tissue. The LigaV[®] clips are delivered in colour coded cartridges to ensure easy and intuitive identification. A cartridge includes 4 or 6 clips that ensure economical and comfortable use. The product is disposable, sterilised with EO.

Clip applicators with proper sized jaws depending on the clip should be used.

Clip applicators are made of highest quality surgical grade steel. Handle rings are color coded matching cartridge hue.

Low density
High strength
Full biocompatibility
Safe for MRI

Ligating Clips

Liga²®

The LigaV® ligating clips are manufactured of a medical grade titanium which ensures proper level of biocompatibility. The applied technology guarantees the product meets the requirements of even the most demanding clinical institutes.
