HAEMOWAX – Sterile Bone Wax

Bone Wax is a mixture of **beeswax, paraffin, and isopropyl palmitate**, a wax-softening agent. It is opaque and has a waxy odor. It's indicated for use in control of bleeding from bone surfaces during surgical procedures.

It achieves local haemostasis of bone by acting as a mechanical (tamponade) barrier. **It does not act biochemically** and is non absorb-able. It is available sterile in individual foil envelopes, each containing **2.5 g** and **packed in an individually sealed over wraps**. Surgical wax is sterilized by Gamma radiation.

Packets should be opened just prior to use to minimize the possibility of contamination and excessive drying and should be used immediately. The Surgical Wax should not be re-sterilized or subjected to excessive heat.
