# A Legacy of Innovation and Quality

Visitec®, a market leader of ophthalmic cannulas, offers a full range of cannulas for several ophthalmic procedures, including cataract, refractive, vitreoretinal, and oculoplastics. Our cannulas are produced at manufacturing locations in the United States and the United Kingdom where a high level of consistency and product quality is upheld.

Visitec® has been focused on providing innovative cannula designs with the highest quality since 1979. A leading brand of Beaver-Visitec International (BVI), Visitec® has been driving the ophthalmic market towards single-use cannulas thereby improving the safety of your patients.

Single-Use Cannulas are highly recommended for surgical use by the ASCRS (American Society for Cataract & Refractive Surgeons) and ESCRS (European Society for Cataract & Refractive Surgeons) because instruments with a small lumen such as a cannula or tubing can be extremely difficult to fully clean. When a cannula is not cleaned and decontaminated effectively, this can lead to the occurrence of Toxic Anterior Segment Syndrome (TASS) and other potential infections. TASS is an acute postoperative inflammatory reaction in which a non-infectious substance enters the anterior segment and induces toxic damage to the intraocular tissue. The utilization of single-use cannula may help prevent the occurrence of TASS, thereby reducing the risk to the patient.
