A TOP-END SYSTEM DESIGNED FOR YOU

Whether your images come from the C-Cube 2 video dermatoscope, a smartphone or tablet, the C-Cube Pro Transfer system becomes your medical image manager.

Its array of functionalities saves you precious time each day. Image transfers take place immediately, as does the generation of patient files and examination reports.

You can document, map, compare and analyse all types of skin pathology in just one click (acne, rosacea, eczema, wounds, melanoma, carcinoma and alopecia, amongst others).

Specially designed to suit the type of consultations you do, whether they are dermatological or aesthetic.

Its touch-screen interface allows you to easily draw on your specialist knowledge for your patients.

DIGITAL DERMATOSCOPE AT THE FOREFRONT OF INNOVATION

As a pioneer in colour calibration, the C-Cube 2 video dermatoscope is the only video epi-luminescence microscopy system that provides control and a perfect reproduction of colours.

Measure pathological changes directly on the image thanks to its exclusive metric calibration.

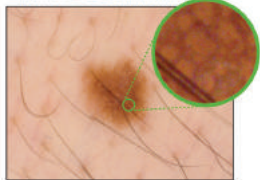

Configured by our experts, the C-Cube 2 video dermatoscope gives you sharp, clean images with a single click. A great time saver!

Its patented lighting lets you work without the complications of using a polarising filter, with or without immersion.

SECURE FILES

Offering comprehensive functionality, speed and efficiency, C-Cube Pro Transfer software is the ideal imaging platform for your practice. Conscious of the fact that your time is precious, we have designed the most effective software on the market in partnership with dermatologists. Free yourself from repetitive tasks and let yourself be guided through each step of your consultations.

ENHANCE YOUR AESTHETIC PROCEDURES

The C-Cube Pro Transfer system's high-quality standardised images allow you to prepare for your procedures, and advance plan and document your aesthetic consultations. Emphasising skin or morphological flaws, and publishing professional before and after reports has never been this quick and easy.

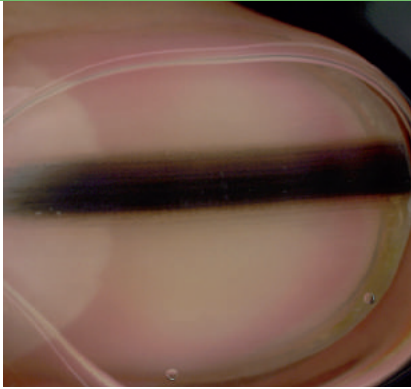

Technical characteristics

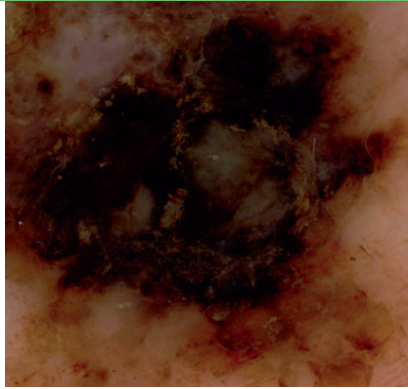

- 18 million pixel sensor (UHD)
- Resolution: 3684 x 4912 px
- Magnification x80 to 160 px
- Embedded mouse enabling remote control
- USB 3 connector, 3m cable
- Interchangeable removable caps for hard-to-reach lesions

THEY USE THE C-CUBE

"The C-Cube is a digital dermoscope that is simple and a pleasure to use. Images are immediately integrated into the patient's file and no time is wasted connecting a camera to imaging software, unlike my old dermatoscope linked to an SLR camera."

Dermatologist, Nièvre

"Why I chose the C-Cube: it is an indispensable tool for dermatologists to monitor at-risk patients. The images are of excellent quality and comparing them is easy. Consultation periods take no longer than examinations using manual dermatoscopes with photo-recording. The price-quality ratio is amazing."

Dermatologist, Isère

"The C-Cube allows patients to see images live with dermatologists. Thus, they easily understand the interest of dermoscopy and the difference with a simple eye control. The touch-screen saves time. The visibility of blood vessels can be used for a more detailed diagnosis. I am satisfied and would recommend it."

Dermatologist, Savoie

PIXIENCE'S COMMITMENT TO QUALITY

Pixience is committed to respecting the strictest medical quality standards for its products. This commitment guarantees that our customers all over the world are satisfied. To this end, Pixience has asked the Laboratoire National de Métrologie et d'Essais (LNE/G-MED), a French notified body in the medical field, to inspect and certify its products. The C-Cube 2 video dermatoscope, a regulated health device, carries the CE Medical Device mark with a 1m-class measuring function. This high level of certification guarantees that the system is the most precise and most reliable for detecting and analysing dermatological pathologies. All devices are made in France, which means they can handle the strictest standards in medicine and are designed to last.
