# Thermal Test LED

### General information

Subject : VOLTANA EVO 1 - 16 Oslon Square Giant - Osram 2DIM 50W - 1000mA - CL I

<u>Asked by</u> : SZÜGYI János Péter <u>Created on</u> : 11/01/2021 <u>Started on</u> : 20/01/2021 <u>Test number</u> : D210034 <u>Reference norm</u> : IEC/EN 60598-1; 60598-2-3; 60598-2-5 Standards <u>Sample(s)</u> : E210028 <u>Folder</u> : P-F21002

### Test conditions

#### Luminaire : VOLTANA EVO 1

<u>Number of LED</u> : 16 <u>LED</u> : Osram OSLON SQUARE GIANT <u>Driver</u> : DRIVER\_OSRAM\_2DIM P\_50W\_600-1250mA\_120-277V\_0-10V\_ \_/ 00-14-565 <u>Number of driver(s)</u> : 1 <u>Driver current (mA)</u> : 1000 <u>SPD</u> : VS SP3/230/10K/i

#### **Operator** : Philippe Léonard

IMG\_7625

### Conclusion

<u>Conclusion</u> :

ΔTs < 80°C no risk of solder crack

Ta: 45°C limited by driver; according IEC 60598-2-3 and IEC 60598-2-5 (outdoor use only) Ta: 35°C limited by driver; indoor use and UL standard Tq: 20°C limited by driver; according IEC 62722-2-1

Tq given for 100 khrs of lifetime

Note : the margins to obtain the Ta and Tq values are below the measurement uncertainties.

Validated by :

The publication of this report in another form than the original one is not allowed without agreement of the laboratory. This report concerns type tests on one or a series of specimens. All information but the measurements results are provided by the customer.

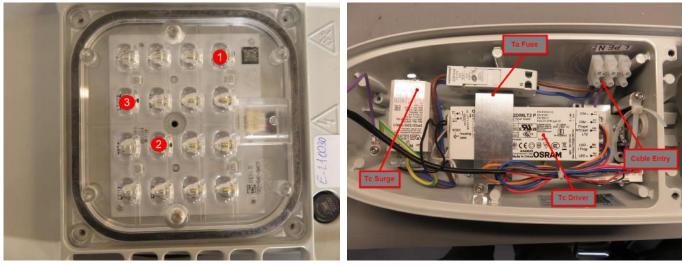

# Test(s) details

### Test(s)

Name	Description	Result
Sensors positions	Disposition of the thermocouples on the DUT.	Informative
Test @ 1000mA	Test according section 12.4 of IEC 60598-1. The DUT is driven until all thermocouples reach thermal stabilization (i.e. variation = 1K/h).	Informative

### Sensors positions

## Annex(es)

#### <u>Test room temperature (°C)</u> :

25.5

Measurement equipment :

Keithley with thermocouples type K (E097) Norma 4000 (E110) APT (E102)

#### Quantities measured :

Qualification of the thermal limits and measurement of the electrical behavior of a luminaire according to PT-S-07

#### <u>Uncertainties</u> :

Statement of uncertainties (K=2, 95% of confidence level): Temperature: 0,6 K Voltage (AC): 0,33% Current (AC): 0,33 % Power (AC): 0,27% Voltage (DC): 0,3 % Current (DC): 0,3% Power (DC): 0,23% Anemometer: ± 0,27 m/s

Decision rules :

No pass/fail criteria applied on electrical measurements

No pass/fail criteria applied on thermal measurements when performed at 25°C (+/- 5°C), the Ta/Tq values are calculated according GDE-POL-001.

Pass/fail criteria on thermal qualification (test performed at announced Ta or Tq)

At the announced Ta, no component is above its maximum limit of operation reduced by the uncertainty on the temperature measurement: pass

At the announced Ta, at least 1 component is above its maximum limit of operation augmented by the uncertainty on the temperature measurement: fail

At the announced Ta, at least 1 component is at its maximum limit of operation ± the uncertainty on the temperature measurement and no other component is above its maximum limit of operation augmented by the uncertainty on the temperature measurement: pass with remark

According to IEC 60598-2-3 and IEC 60598-2-5 Standards, the maximum limit of every component can be augmented by 10 K provided that the luminaire is intended for outdoor use only.

At the announced Tq, no component is above its selected performance limit of operation reduced by the uncertainty on the temperature measurement: pass

At the announced Tq, at least 1 component is above its selected performance limit of operation augmented by the uncertainty on the temperature measurement: fail

At the announced Tq, at least 1 component is at its selected performance limit of operation ± the uncertainty on the temperature measurement and no other component is above its selected performance limit of operation augmented by the uncertainty on the temperature measurement: pass with remark

According to IEC 62722-2-1, the selected performance limit cannot be augmented by 10 K even if the luminaire is intended for outdoor use.

Any Ta/Tq defined value will be rounded down to the nearest multiple of 5.

In any case, test at 25°C or test at Ta or Tq, if delta Ts is above the recommended value of the GDE-POL-001, the test is failed.
