To whom it might concern,

We confidently recommend IM "Enterprise Business Solutions" SRL, for delivering complex paperless solution and digital transformation services to educational, non-profit as well as commercial organizations that require a paradigm shift of their information management processes.

We, at the Center of Excellence in Informatics and Informational Technologies faced a huge bottleneck, specifically when managing academic achievements, logistics and generic assessment events within our organization. We understood our institution needed to act and manage our information differently, especially due to its profile. Before building something from scratch, we decided to explore available solutions and that's how we reached Enterprise Business Solutions.

At the time, they were already running a beta project, designed for vocational structures that ended up being our "one-size fits all" solution for managing our institutional data and getting rid of paper-supported operations.

Over the years, Enterprise Business Solutions I's expertise, their insight knowledge as well as comprehension of our operations resulted in a tailor-made digital transformation software that powers our operations to date.

With all this being said, we recommend EBS as a team that builds process-driven software and does not tolerate one-off patches. Their software development ahead of results in products with little or no technical debt, fighting against rigid life-cycles and short-lived software solutions.

Director CEITI

V. Zavadschi
