Ortholo<sup>®</sup>

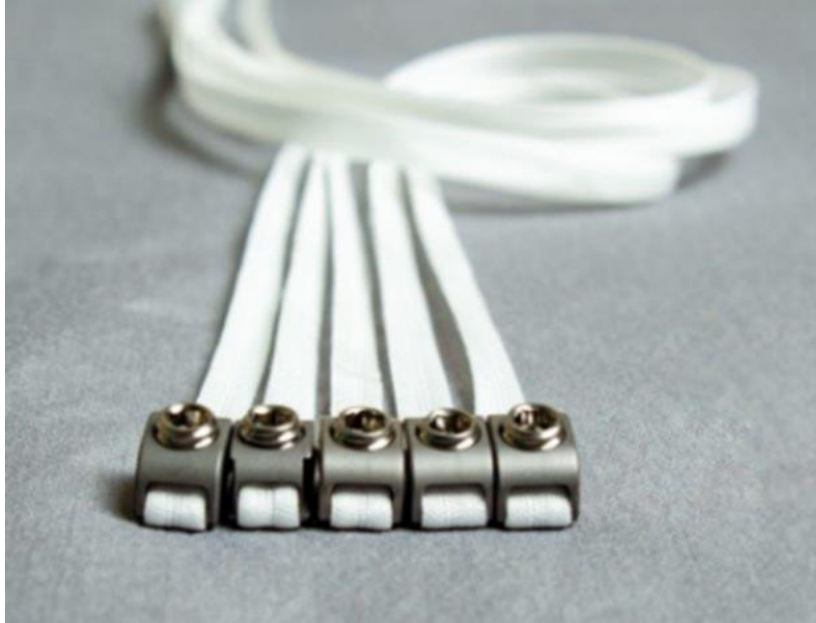

Ortolog was founded in 2017 in Ankara, Turkey with more than 20 years of experience in the orthopedic sector. Our principles are to develop and design our own products that are beneficial to human health and that will enable our patients to return to their social and economic life without pain in a short period of time, respecting bone and soft tissue and following newest technology.

In line with these principles;

- In every decision we take, we know that we are responsible to our stakeholders who are our patients, their families, healthcare professionals and reimbursement institutions, and therefore we will respect the general ethics and legal laws in our community and the countries where our products are used.
- We provide opportunities for our business partners to ensure fair profit by supplying our products, which are above accepted standards and continuously controlled at cost.
- We give our employees the opportunity to work in a healthy environment by assigning tasks in line with their knowledge and experience. We give our employees the right to speak, we listen to them and emphasize the importance of gender equality in our offices. We ensure that the employees and their families feel good and safe and thus, we, along with our employees, develop, produce and market products that follow technology with the minimal invasive designs for tissues.
- We respect the right to life of all living beings in the society and the world in which we live, and show sensitivity to the protection of the environment and natural resources, recycling and education.

***We don't manufacture products that we won't use for ourselves and our family.***
