

BI-POLAR HEADS

Monobloc / Modular

CE
0426

Product Information

permedica Bi-Articular Cups consists in an external shell made of stainless steel alloy and a UHMWPE inner core. They are available both in Monobloc and in Modular version.

The articulation distributed upon a double surface (Articular head and bi-articular Cup) reduces friction against the acetabular cartilage. Positive eccentricity provides for automatic valgus positioning of the cup, reducing the risk of dislocation and improving the stress distribution over the acetabular cartilage.

BI-Articular Head Monobloc

19 diameters
42 to 60mm

28mm socket

Metal shell and polyethylene core are supplied pre-assembled.

The cup is provided with a special locking ring which allows engaging of the articular head by means of a snap-on system.

Monobloc cups are available in a range of sizes from 42 to 60mm, with millimetric increments, with inner socket matching 28mm articular heads.

BI-Articular Head Modular

22 diameters
39 to 60mm

28mm socket

Metal shell and polyethylene core are supplied in two separated packaging.

The liner is provided with a special ring which allows retention of the articular head once inserted into the metal shell.

Modular cups are available in a range of sizes from 39 to 60mm, with millimetric increments, with inner socket matching 28 mm articular heads.

Bi-Articular Cup - Monobloc

Information

INTENDED PURPOSE:

Bi-Articular cup is intended to be used for the prosthetic replacement of the femoral head in hemi-arthroplasty applications, in combination with a femoral stem and an articular head. It is indicated in partial hip replacement procedures where the acetabular cartilage is not involved in arthrosic disease and therefore an hemi-arthroplasty has been chosen (usually in cases of femoral head fractures).

MATERIALS:

METAL SHELL- MONOBLOC: PM734 highly nitrogenized Stainless Steel forged alloy - ISO5832/9.

METAL SHELL- MODULAR: AISI316 stainless steel alloy - ISO5832/1.

PM734 highly nitrogenized Stainless Steel forged alloy - ISO5832/9.

INSERT: Ultra High Molecular Weight Polyethylene, without calcium stearate - ISO5834/1/2.

STERILIZATION:

Method: Ethylene Oxide (ETO) sterilization or accelerated electron beam irradiation (β rays nominal dose 25 kGy)

Validity: 5 years.

CLASSIFICATION:

Class III as reported in Directive 2005/50/CE (and related D.lgs 26 april 2007 n.65) concerning re-classification of Hip, Knee and Shoulder joint prostheses which modifies classification criteria of Annex IX of Directive 93/42/CEE and next integrations and amendments.
