General Information & Ordering

How to Order
Technical Support

- Experience the ULTRAVIT® 5000 cpm probe with surgeon controlled duty cycle to reduce iatrogenic tears and post-op complications¹
- Trust in integrated and stable IOP compensation²
- Enhance patient outcomes and achieve faster visual recovery with ALCON® MIVS™ platforms³
- Increase efficiency during cataract removal with OZil® Torsional Handpiece^{4,6}
- Improve your OR set up time by 36% with V-LOCITY® Efficiency Components⁵

constellation[®] VISION SYSTEM

CONSTELLATION[®] Vision System

Full-function vitreoretinal system with complete posterior segment and anterior segment procedure capabilities

- The ULTRAVIT[®] vitrectomy probe with duty cycle control provides high speed cutting and the ability to modify duty cycle for flow control independent of vacuum and cutting
- Advanced Xenon Illuminator provides state of the art illumination for visualizing tissues
- Embedded 532nm PUREPOINT[®] Laser offers advanced laser technology controlled from the CONSTELLATION[®] Vision System screen for an integrated surgical experience
- V-LOCITY[®] Efficiency Components including ENGAUGE[®] RFID^{*}, Auto-infusion Valve, Auto Gas Fill and the Articulating Tray Arm are designed to optimize OR setup and enhance the surgical experience
- 17" Articulating touch panel screen with advanced GUI (Graphic User Interface) and video DFUs (Directions for Use)

- 8065751550 | 1 each | CONSTELLATION[®] Vision System LXT includes embedded PUREPOINT[®] Laser
- 8065751548 | 1 each | CONSTELLATION[®] Vision System XT without embedded PUREPOINT[®] Laser
- 8065751150 | 1 each | CONSTELLATION[®] Vision System Tabletop

CONSTELLATION[®] VISION SYSTEM

See the last page of this section for Important Safety Information about these products.

CONSTELLATION® Fragmentation Hand Piece

- Lightweight, improved ergonomic design

8065750888 | 1 each

STAND ALONE COMPONENTS

8065750958 | CONSTELLATION® Fragmentation Pak | 20 Gauge | 6/box

8065803602 | Sterilization Tray (U/S & Fragmentation Hand Piece) | 1 each

OZil® Torsional Handpiece

The unique OZil® Torsional handpiece is the only phaco device that features side-to-side oscillating ultrasonic movement. The result is a wide range of exceptional benefits during phacoemulsification procedures.

- Reduces repulsion
- Improves followability
- Improves thermal safety profile
- Small and lightweight handpiece

8065750469 | 1 each

See Anterior Pack and Stand Alone Components options in this section

Auto Gas Fill

- V-LOCITY® efficiency component
- Automatic purge and fill of syringe with undiluted C₃F₈ or SF₆ gases
- Designed to simplify the gas fill process
- ENGAUGE® RFID
- Sterile, single-use

8065751014 | Auto Gas Fill Pack | 6/box

See Tamponade/Gases & Solutions section for details on CONSTELLATION® System Gases

CONSTELLATION® VFC Pak

- Sterile pack for injection and extraction of silicone oil
- Includes: VFC Syringe Adaptor with ENGAUGE® RFID, 10cc Syringe Barrel, Syringe Stopper, 20 Gauge Cannula, 23 Gauge Cannula, 25 Gauge Cannula, High Speed Extraction Sleeve, Push Rod
- ENGAUGE® RFID
- Sterile, single-use

8065750957 | 6/box

20 23 25

CONSTELLATION® Pneumatic Hand Piece, DSP

- Designed for use with 20, 23, 25, or 27+® Gauge GRIESHABER® Advanced DSP tips
- Lightweight, ergonomic handle with superior control of actuation through the footpedal
- Single-cut or multi-cut scissors actuation similar to MPC
- Proportional control also available for scissors or forceps
- ENGAUGE® RFID
- Sterile, single-use

725.01 | 6/box

Diathermy Probe, DSP

- Designed to selectively coagulate tissue
- Pointed 30° tip for optimal visualization
- Ergonomic handle design
- For use on the CONSTELLATION® Vision System or ACCURUS® Surgical System

339.31 | 27+® | 6/box*

8065128402 | 12' Reusable Bipolar Silicone Cable | 1each CE

23 Gauge

CONSTELLATION® Vitrectomy TOTAL PLUS® Pak

Non-Valved Contents Include:

- 23 Gauge ULTRAVIT® Vitrectomy Probe
- Cassette/Drain Bag
- 23 Gauge Endoilluminator
- 4 mm Infusion Cannula
- EDGEPLUS® Trocar/Cannula Sets
- 23 Gauge Plugs (3)
- GFI Administration Tubing Set
- Infusion Tubing Set with Auto-Infusion Valve
- Auxilliary Aspiration Tubing
- Sterile Front Panel Drape
- 3-way Stopcock
- 20 cc Syringe

CONSTELLATION® Combined Procedure Pak

Non-Valved Contents Include:

- 23 Gauge ULTRAVIT® Vitrectomy Probe
- Cassette/Drain Bag
- 23 Gauge Endoilluminator
- 4 mm Infusion Cannula
- EDGEPLUS® Trocar/Cannula Sets
- 23 Gauge Plugs (3)
- GFI Administration Tubing Set
- Infusion Tubing Set with Auto-Infusion Valve
- Irrigation/Aspiration Tubing Set
- Sterile Front Panel Drape
- 3-way Stopcock
- 20 cc Syringe
- Test Chamber
- I/A Tip Wrench
- Irrigation Sleeves (2) with BSI (1)

EDGE PLUS[®] BLADE

Valved Entry System

Valved cannula provides a closed system, eliminating the need for plugs and decreasing instrument exchanges

- EDGEPLUS[®] blade delivers a flat linear incision
- Cannula removes easily from trocar after insertion without secondary instrument
- Low friction silicone valves designed for smooth instrument exchange
- Locking mechanism on trocar hub provides for rotational control of cannula during insertion

Vent is provided with each set for cases that require normalizing pressure (e.g. silicone oil or perfluorocarbon liquids).

CONSTELLATION® Vision System with PUREPOINT® Laser Brief Statement

Indications for Use: The CONSTELLATION® Vision System is an ophthalmic microsurgical system that is indicated for both anterior segment (i.e., phacoemulsification and removal of cataracts) and posterior segment (i.e., vitreoretinal) ophthalmic surgery.

The PUREPOINT® Laser is indicated for use in photocoagulation of both anterior and posterior segments of the eye including:

- Retinal photocoagulation, panretinal photocoagulation and intravitreal endophotocoagulation of vascular and structural abnormalities of the retina and choroid including: Proliferative and nonproliferative retinopathy (including diabetic); choroidal neovascularization secondary to age-related macular degeneration; retinal tears and detachments; macular edema, retinopathy of prematurity; choroidal neovascularization; leaking microaneurysms.
- Iridotomy/Iridectomy for treatment of chronic/primary open angle glaucoma, acute angle closure glaucoma and refractory glaucoma.
- Trabeculoplasty for treatment of chronic/primary open angle glaucoma and refractory glaucoma.
- And other laser treatments including: internal sclerostomy; lattice degeneration; central and branch retinal vein occlusion; suturelysis; vascular and pigment skin lesions.

Caution: Federal (USA) law restricts this device to sale by, or on the order of, a physician.

Contraindications: Patients with a condition that prevents visualization of target tissue (cloudy cornea, or extreme haze of the aqueous humor of the anterior chamber of vitreous humor) are poor candidates for LIO delivered laser treatments.

Complications: Corneal burns, inflammation, loss of best-corrected visual acuity, loss of visual field and transient elevations in intraocular pressure can occur as a result of ophthalmic laser treatment. Unintentional retinal burns can occur if excessive treatment beam power or duration is used.

Warnings and Precautions:

- The disposables used in conjunction with Alcon instrument products constitute a complete surgical system. Use of disposables and handpieces other than those manufactured by Alcon may affect system performance and create potential hazards.
- Attach only Alcon supplied consumables to console and cassette luer fittings. Do not connect consumables to the patient's intravenous connections.
- Mismatch of consumable components and use of settings not specifically adjusted for a particular combination of consumable components may create a patient hazard.
- Vitreous traction has been known to create retinal tears and retinal detachments.
- The closed loop system of the CONSTELLATION® Vision System that adjusts IOP cannot replace the standard of care in judging IOP intraoperatively. If the surgeon believes that the IOP is not responding to the system settings and is dangerously high or low, this may represent a system failure. Note: To ensure proper IOP Compensation calibration, place infusion tubing and infusion cannula on a sterile draped tray at mid-cassette level during the priming cycle.
- Leaking sclerotomy may lead to post operative hypotony.
- Back scattered radiation is of low intensity and is not harmful when viewed through a protective filter. All personnel in the treatment room must wear protective eyewear, OD4 or above at 532nm, when the system is in Standby/Ready mode as well as during treatment. The doctor protection filter is an OD greater than 4 at 532nm.

Important Safety Information: Warnings and Cautions: A complete listing is available in the CONSTELLATION® Vision System Operators Manual. To obtain a copy, please contact Alcon Customer Service.

Attention: Reference the Directions for Use for a complete listing of indications, warnings, and precautions.

ALCON® MIVS™ Portfolio Brief Statement

Indications for Use: The CONSTELLATION® Vision System is an ophthalmic microsurgical system that is indicated for both anterior segment (i.e., phacoemulsification and removal of cataracts) and posterior segment (i.e., vitreoretinal) ophthalmic surgery.

Caution: Federal (USA) law restricts this device to sale by, or on the order of, a physician.

Warnings and Precautions:

- Attach only ALCON® supplied products to console and cassette luer fittings. Improper usage or assembly could result in a potentially hazardous condition for the patient. Mismatch of surgical components and use of settings not specifically adjusted for a particular combination of surgical components may affect system performance and create a patient hazard. Do not connect surgical components to the patient's intravenous connections.
- Each surgical equipment/component combination may require specific surgical setting adjustments. Ensure that appropriate system settings are used with each product combination. Prior to initial use, contact your ALCON® sales representative for in-service information.
- Care should be taken when inserting sharp instruments through the valve of the Valved Trocar Cannula. Cutting instrument such as vitreous cutters should not be actuated during insertion or removal to avoid cutting the valve membrane. Use the Valved Cannula Vent to vent fluids or gases as needed during injection of viscous oils or heavy liquids.
- Visually confirm that adequate air and liquid infusion flow occurs prior to attachment of infusion cannula to the eye.
- Ensure proper placement of trocar cannulas to prevent sub-retinal infusion.
- Leaking sclerotomies may lead to post operative hypotony.
- Vitreous traction has been known to create retinal tears and retinal detachments.
- Minimize light intensity and duration of exposure to the retina to reduce the risk of retinal photic injury.

ATTENTION: Reference the Directions for Use labeling for a complete listing of indications, warnings, precautions, complications and adverse events.

The PLUS Difference Sums It Up

- + Improved duty cycle & higher aspiration flow rates in 25+[®] probe¹

Your Complete Approach to Improved Stiffness

The ALCON[®] 25+[®] probe is matched with linear EDGEPLUS[®] blade wound architecture, advanced GRIESHABER[®] DSP 25+[®] single-use instrumentation and 25+[®] illumination probes.

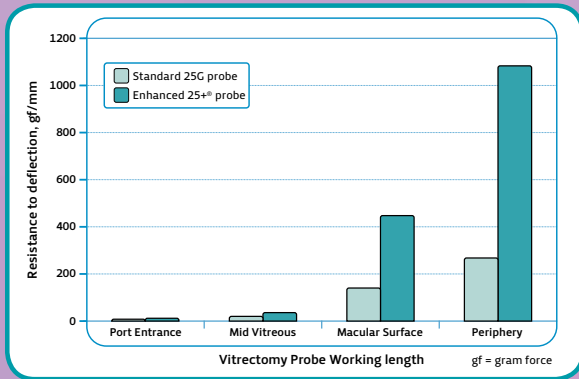

- + 25+[®] probe has a maximum cut rate of 2500 CPM vs. 25G at 1500 CPM¹

- + The 25+[®] probe advanced port optimization brings you closer with more efficiency.

- + 25+[®] probe is 4 times stiffer than the 25G standard probe¹

Extending both the blade edge and the cylinder ridge sums up the EDGEPLUS[®] blade advantage.

¹ Avery R. Single surgeon experience with an enhanced 25+[®] vitrectomy probe/entry system. ASRS Poster, 2009.

CONSTELLATION® Vision System with PUREPOINT® Laser Brief Statement

Indications for Use: The CONSTELLATION® Vision System is an ophthalmic microsurgical system that is indicated for both anterior segment (i.e., phacoemulsification and removal of cataracts) and posterior segment (i.e., vitreoretinal) ophthalmic surgery.

The PUREPOINT® Laser is indicated for use in photocoagulation of both anterior and posterior segments of the eye including:

- Retinal photocoagulation, panretinal photocoagulation and intravitreal endophotocoagulation of vascular and structural abnormalities of the retina and choroid including: Proliferative and nonproliferative retinopathy (including diabetic); choroidal neovascularization secondary to age-related macular degeneration; retinal tears and detachments; macular edema, retinopathy of prematurity; choroidal neovascularization; leaking microaneurysms.
- Iridotomy/Iridectomy for treatment of chronic/primary open angle glaucoma, acute angle closure glaucoma and refractory glaucoma.
- Trabeculoplasty for treatment of chronic/primary open angle glaucoma and refractory glaucoma.
- And other laser treatments including: internal sclerostomy; lattice degeneration; central and branch retinal vein occlusion; suturelysis; vascular and pigment skin lesions.

Caution: Federal (USA) law restricts this device to sale by, or on the order of, a physician.

Contraindications: Patients with a condition that prevents visualization of target tissue (cloudy cornea, or extreme haze of the aqueous humor of the anterior chamber of vitreous humor) are poor candidates for LIO delivered laser treatments.

Complications: Corneal burns, inflammation, loss of best-corrected visual acuity, loss of visual field and transient elevations in intraocular pressure can occur as a result of ophthalmic laser treatment. Unintentional retinal burns can occur if excessive treatment beam power or duration is used.

Warnings and Precautions:

- The disposables used in conjunction with Alcon instrument products constitute a complete surgical system. Use of disposables and handpieces other than those manufactured by Alcon may affect system performance and create potential hazards.
- Attach only Alcon supplied consumables to console and cassette luer fittings. Do not connect consumables to the patient's intravenous connections.
- Mismatch of consumable components and use of settings not specifically adjusted for a particular combination of consumable components may create a patient hazard.
- Vitreous traction has been known to create retinal tears and retinal detachments.
- The closed loop system of the CONSTELLATION® Vision System that adjusts IOP cannot replace the standard of care in judging IOP intraoperatively. If the surgeon believes that the IOP is not responding to the system settings and is dangerously high or low, this may represent a system failure. Note: To ensure proper IOP Compensation calibration, place infusion tubing and infusion cannula on a sterile draped tray at mid-cassette level during the priming cycle.
- Leaking sclerotomy may lead to post operative hypotony.
- Back scattered radiation is of low intensity and is not harmful when viewed through a protective filter. All personnel in the treatment room must wear protective eyewear, OD4 or above at 532nm, when the system is in Standby/Ready mode as well as during treatment. The doctor protection filter is an OD greater than 4 at 532nm.

Important Safety Information: Warnings and Cautions: A complete listing is available in the CONSTELLATION® Vision System Operators Manual. To obtain a copy, please contact Alcon Customer Service.

Attention: Reference the Directions for Use for a complete listing of indications, warnings, and precautions.

Vitreoretinal Laser Probes Brief Statement

Indications for Use: ALCON® Laser probes are fiber optic probes indicated for use with an ALCON® Laser System. Each package contains individually packaged sterile laser probes.

Caution: Federal (USA) law restricts this device to sale by, or on the order of, a physician.

Warnings and Precautions:

- Do not use if package is damaged.
- Minimize the illuminator's light intensity.
- Avoid operation of illuminated probes in air on consoles capable of illumination levels and settings higher than 10 lumens. This can result in fiber deformation and/or high surface temperatures.

Attention: Reference the Directions For Use for a complete listing of indications, warnings specific to the laser model.

ILLUMINATION ACCESSORIES

ALCON[®] Chandelier Lighting System

- Designed to slightly deform to the dimple in the hub for secure engagement
- Able to engage in either the 23G or 25G cannula hubs
- Wider coverage area than standard or wide angle
- Illumination angle is 106°

**RFID⁺

ALCON® Lighted Instruments with ENGAUGE® RFID Brief Statement

CAUTION: Federal (USA) law restricts this device to sale by, or on the order of, a physician.

CAUTION: This document is not intended to substitute for the necessity of reading and understanding the light source Operator's Manual.

INDICATIONS AND USAGE: Fiber Optic Instruments with ENGAUGE® Radio Frequency Identification Device (RFID) for use with the CONSTELLATION® System. These instruments can be used on the ACCURUS® System or ACCURUS® High Brightness Illuminator (AHBI) using the RFID Adapter Model Number 8065751140.

WARNINGS AND PRECAUTIONS:

- Minimize the light intensity and duration of exposure to the retina to reduce risk of retinal photic injury.
- Avoid operation of a fiber in air on consoles capable of illumination levels and settings higher than 10 lumens. This may result in fiber probe deformation and/or high surface temperatures that may cause patient injury.

ATTENTION: Reference the Directions for Use labeling for a complete listing of indications, warnings, precautions, complications and adverse events.

Alcon® / **GRIESHABER**®
DSP Instrumentation

Available in multiple tip styles in 23, 25+[®] series and 20 gauge instruments. Single-use, sterile.

16 individual levers provide tactile feedback. 360° actuation rotational freedom for precise intraocular tip placement.

Very lightweight polymeric, ergonomic handle for exceptional balance and control.

GRIESHABER REVOLUTION[®] DSP

High quality, sterile, ready-to-use vitreoretinal instruments with lightweight 360° activation handle. Made by Swiss craftsmen, GRIESHABER REVOLUTION[®] DSPs are designed to perform at the highest level in every case.

Fine Membranes

GRIESHABER REVOLUTION® DSP ILM Forceps

GRIESHABER® DSP SINGLE-USE INSTRUMENTS

25+® instruments answer the most common barrier to 25G – instrument flexibility.

25+

**GRIESHABER
REVOLUTION®
Handle**

- Lightweight polymeric, ergonomic handle for exceptional balance and enhanced control
- 36 individual, sculpted levers provide tactile feedback
- 360° actuation rotational freedom for precise intraocular tip placement

712.00.41 | Red
712.00.42 | Blue

**GRIESHABER®
RENAISSANCE® NG
Handle**

- Squeeze actuation mechanism
- Compatible with quick-lock connector tips
- Sleek, symmetrical, handle is light and ergonomic

712.00.31 | Red
712.00.32 | Blue

**GRIESHABER®
SUTHERLAND NG
Handle**

- A staple of vitreoretinal surgeons for nearly 25 years
- Quick-lock connector compatible
- Simplistic design using a single lever mechanism

712.00.11 | Red
712.00.12 | Blue

**GRIESHABER®
RENAISSANCE®
Advanced
Handle**

- Slimmer design, shorter travel to actuate
- Lightweight handle with optimized center of gravity
- **Designed for use with GRIESHABER® Advanced DSP Tips only**

GRIESHABER® Advanced DSP Backflush – surgeon controlled immediate aspiration and reflux

GRIESHABER® Aspheric Macular Lens

- Designed for improved visualization with enhanced contrast and crisp viewing throughout field of view
- Excellent self retaining qualities with more than 200mm² corneal surface contact area
- Six tabs stabilize but do not interfere with cannulas or globe rotation.
- Aspheric geometry offers improvements over traditional lens geometry to compensate for off-axis stereo viewing, defocus, loss of contrast and edge sharpness

618.60 | 6/box | ~30° FOV -59D

Diathermy Probe, DSP

- Designed to selectively coagulate tissue
- Pointed 30° tip for optimal visualization
- Ergonomic handle design
- For use on the CONSTELLATION® Vision System or ACCURUS® Surgical System

339.21 | 25 Gauge | 6/box*

339.31 | 27+° | 6/box*

8065128402 | 12' Reusable Bipolar Silicone Cable | 1 each CE

CONSTELLATION® Pneumatic Hand Piece, DSP

- Designed for use with 20, 23, 25, 25+°, or 27+° series GRIESHABER® Advanced DSP tips
- Lightweight, ergonomic handle with superior control of actuation through the footpedal
- Single-cut or multi-cut scissors actuation similar to MPC
- Proportional control also available for scissors or forceps
- ENGAUGE® RFID
- Sterile, single-use

725.01 | 6/box

ACCURUS® Pneumatic Hand Piece Adaptor

- Converts the ACCURUS® Pneumatic Hand Piece (8065808101) to be used with DSP tips
- Threaded to quick lock connector adaptor
- Reusable

712.00.01 | 1 each

8065808101 | ACCURUS® Pneumatic Hand Piece | 1 each

Flexible Iris Retractors

- Single-use, sterile
- Strong yet flexible nylon hooks for mechanical iris dilation
- Smooth finish on material in contact with the cornea and iris

611.74 | 1 unit of 5 retractors | 1/box

611.75 | 6 units of 5 retractors | 1/box

Sclerotomy Adaptor, DSP

- Single-use, sterile
- Allows conversion of a 20 Gauge non-cannulated incision down to either a 23 Gauge or 25 Gauge cannula-based surgery
- Contains one sclerotomy adaptor and one plug

617.91 | 20/23 Gauge | 6/box

617.92 | 20/25 Gauge | 6/box

GRIESHABER ULTRASHARP® Dissection Knife

- Spatula-shaped knife of 0.6mm used to make self-sealing incision at the limbus
- This knife can be used to make incision for Flexible Iris Retractors (611.74/611.75)

681.05 | 1 each

GRIESHABER® DSP Combined Brief Statement

Indications for Use: The CONSTELLATION® Vision System is an ophthalmic microsurgical system that is indicated for both anterior segment (i.e., phacoemulsification and removal of cataracts) and posterior segment (i.e., vitreoretinal) ophthalmic surgery.

GRIESHABER® DSP instruments are a line of single-use vitreoretinal micro-instruments which are used in ophthalmic surgery, for cases either in the anterior or the posterior segment. The GRIESHABER® Advanced Backflush Handles DSP are a family of instruments for fluid and gas handling in vitreoretinal surgery.

Caution: Federal (USA) law restricts this device to sale by, or on the order of, a physician.

Warnings and Precautions: CONSTELLATION® Vision System

- The disposables used in conjunction with ALCON® instrument products constitute a complete surgical system. Use of disposables and handpieces other than those manufactured by Alcon may affect system performance and create potential hazards.
- Attach only consumables supplied by Alcon to console and cassette luer fittings. Do not connect consumables to the patient's intravenous connections.
- Mismatch of consumable components and use of settings not specifically adjusted for a particular combination of consumable components may create a patient hazard.
- Vitreous traction has been known to create retinal tears and retinal detachments.
- The closed loop system of the CONSTELLATION® Vision System that adjusts IOP cannot replace the standard of care in judging IOP intraoperatively. If the surgeon believes that the IOP is not responding to the system settings and is dangerously high or low, this may represent a system failure. Note: To ensure proper IOP Compensation calibration, place infusion tubing and infusion cannula on a sterile draped tray at mid-cassette level during the priming cycle.
- Leaking sclerotomy may lead to post operative hypotony.

Warnings and Precautions: GRIESHABER® DSP Instruments

- Potential risk from reuse or reprocessing GRIESHABER® DSP instruments include: foreign particle introduction to the eye; reduced cutting or grasping performance; path leaks or obstruction resulting in reduced fluidics performance.
- Verify correct tip attachment, function and tip actuation before placing it into the eye for surgery.
- For light fiber instruments: Minimize light intensity and duration of exposure to the retina to reduce risk of retinal photic injury. The light fiber instruments are designed for use with an ALCON® illumination source.
- Good clinical practice dictates the testing for adequate irrigation and aspiration flow prior to entering the eye. If stream of fluid is weak or absent, good fluidics response will be jeopardized.
- Use appropriate pressure supply to ensure a stable IOP.
- If unwanted tissue gets engaged to the aspiration port, it should be released by interrupting aspiration before moving the instrument.

Attention: Reference the device specific Directions for Use for a complete listing of indications, warnings, and precautions.

GRIESHABER® Aspheric Macular Lens Brief Statement

Indications for Use: The GRIESHABER® DSP Aspheric Macular Lens is used to visualize the fundus and retinal structures during vitreoretinal surgery. It is designed as a self-retaining contact lens to allow hands-free operation.

Caution: Federal (USA) law restricts this device to sale by, or on the order of, a physician.

Warnings and Precautions:

- The device may be used only by well trained physicians and personnel.
- Potential risk from reuse or reprocessing include: reduced optical quality, surface damage on the optics, and foreign particle introduction to the eye.
- The surgeon's team has to ensure that sufficient viscous fluid is available throughout usage of the lens for continuous humidification of the cornea.

Attention: Reference the Directions for Use for a complete listing of indications, warnings, and precautions.

GRIESHABER® Diathermy Brief Statement

Indications for Use: The GRIESHABER® Diathermy Probes are used for cases either in the anterior or posterior eye segment. Diathermy can be used to treat retinal tears, stop surface bleeding and selectively coagulate tissue by applying electrical energy.

Caution: Federal (USA) law restricts this device to sale by, or on the order of, a physician.

Warnings and Precautions:

- The device may be used only by well trained physicians and personnel.
- Potential risk from reuse or reprocessing include: insufficient coagulation performance, and foreign particle introduction into the eye.
- Do not use the coagulation instruments on patients with pacemakers. If electro surgery is used on patients with implanted cardiac pacemakers or pacemaker electrodes, be aware that irreparable damage to the pacemaker and its function may occur and lead to ventricular fibrillation.
- Do not activate coagulation while instrument tip is in contact with a metallic surface.
- Prior to each use, the instrument and cord must be thoroughly inspected. Using damaged instruments or cables can result in injury to the patient or the operating room personnel.
- Connect the bipolar cable to the coagulation receptacles of the console only.
- Flammable agents or solvents should be allowed to fully evaporate before application of high-frequency energy.
- Avoid prolonged activation. Multiple short activations allow the normal surrounding tissue to remain cool.

Attention: Reference the Directions for Use for a complete listing of indications, warnings, and precautions.

PERFLUORON® Liquid Brief Statement

CAUTION: Federal (USA) law restricts this device to sale by, or on the order of, a physician.

INDICATION: PERFLUORON® (purified perfluoro-n-octane liquid) is an intraoperative tool indicated for use during vitreoretinal surgery in patients with primary or recurrent retinal detachment which is complicated by penetrating ocular trauma, giant retinal tear(s) or proliferative vitreoretinopathy (PVR).

CONTRAINDICATIONS:

- PERFLUORON® liquid is contraindicated for long-term use in the eye or as vitreous replacement.

WARNINGS:

- PERFLUORON® liquid should not be injected directly into the vitreous, or injected simultaneously with aspiration of the vitreous, as severe intraocular damage may occur.
- At the conclusion of the surgical procedure PERFLUORON® liquid must be COMPLETELY removed from the eye and replaced with an appropriate vitreous substitute.

ATTENTION: Reference the Directions for Use labeling for a complete listing of indications, warnings, precautions, complications and adverse events.

SILIKON™ 1000 Oil Brief Statement

CAUTION: Federal (USA) law restricts this device to sale by, or on the order of, a physician.

INDICATION: SILIKON™ 1000 oil is indicated for use as a prolonged retinal tamponade in selected cases of complicated retinal detachments where other interventions are not appropriate for patient management. Complicated retinal detachments or recurrent retinal detachments occur most commonly in eyes with proliferative vitreoretinopathy (PVR), proliferative diabetic retinopathy (PDR), cytomegalovirus (CMV) retinitis, giant tears, and following perforating injuries. SILIKON™ 1000 oil is also indicated for primary use in detachments due to Acquired Immune Deficiency Syndrome (AIDS), related CMV retinitis and other viral infections affecting the retina.

CONTRAINDICATIONS:

- SILIKON™ 1000 oil (purified polydimethylsiloxane) is contraindicated in patients with known hypersensitivity to silicone oil.
- SILIKON™ 1000 oil is contraindicated in pseudophakic patients with silicone intraocular lenses.

WARNINGS/PRECAUTIONS:

- Oil-induced papillary block and angle closure can occur in aphakic eyes if a six o'clock iridectomy is not performed.
- Do not use a vial for more than one patient.
- Discard unused portion.
- Do not admix with any other substances prior to injection.
- Do not resterilize.
- Do not use expired product.
- An underfill may result in an ineffective inferior tamponade and an overfill may result in corneal abnormalities and elevated IOP.
- The use of SILIKON™ 1000 oil as a long term tamponade has not been studied and must be determined by the treating physician. SILIKON™ 1000 oil should be removed when, in the judgment of the physician, the retinal attachment would not be compromised.

ATTENTION: Reference the Directions for Use labeling for a complete listing of indications, warnings, precautions, complications and adverse events.

ISPAN* Perfluoropropane (C3F8) Gas Brief Statement

Description: ISPAN* Perfluoropropane (C3F8) is a liquefied gas under pressure and is administered by injection into the vitreous cavity. It is Octafluoropropane (C3F8) from the Haloalkanes chemical family. The boiling point is -36.7°C (-34.1°F) and the vapor pressure at 20°C is 100 psig (pounds per square inch gauge). Perfluoropropane is clear and colorless with a faintly sweet odor. ISPAN* C3F8 purity: perfluoropropane (Octafluoropropane) 99.8% (minimum), air 1000 ppm (maximum) and perfluoropropene 10 ppm (maximum).

Caution: Federal (USA) law restricts this device to sale by, or on the order of, a physician.

Indications: ISPAN* Perfluoropropane (C3F8) is a surgical aid for use in the treatment of uncomplicated retinal detachment by pneumatic retinopexy. It is used in the form of an intravitreal injection for selected retinal breaks and to aid in resorption of subretinal fluid. Associated measures used include transconjunctival and transcleral cryotherapy and laser photocoagulation.

Contraindications: Proliferative vitreoretinopathy (PVR) greater than Stage C, then mental or physical inability to maintain the therapeutic position for 5 postoperative days, severe glaucoma with more than a minimum of field loss and a cup to disc ratio equal to or greater than 0.6; uveitis; severe peripheral retinal degeneration; and high altitude travel, include but not limited to airline travel.

Warnings: Use of Nitrous Oxide (N2O) must be stopped at least 10 minutes before gas injection to ensure an adequate postoperative bubble is achieved. Do not administer Nitrous Oxide (N2O) if a gas bubble is present.

Do not use the ISPAN* gas if the cylinder pressure is below 50 psi as the expansion performance of the gas may change resulting in elevated intraocular pressure.

Precautions: Caution should be used in eyes with angle recession, pigment dispersion syndrome, significant anterior synechiae, traumatized eyes and eyes with significant vitreous hemorrhage obscuring an adequate view of the peripheral retina.

Attention: Reference the Physician Labeling/Directions for Use for a complete listing of adverse reactions, warnings and precautions.

Sulfur Hexafluoride (SF6) Gas Brief Statement

Description: ISPAN* Sulfur Hexafluoride (SF6) is a liquefied gas under pressure and is administered by injection into the vitreous cavity. It is a colorless, odorless, non-toxic, non-flammable gas. The boiling point is -63.9°C (-83°F) and the vapor pressure at 20°C is 320 psig (pounds per square inch gauge). ISPAN* SF6 purity: sulfur hexafluoride 99.99% (minimum), air 100 ppm (maximum) carbon tetrafluoride 100 ppm (maximum) and hydrogen fluoride 0.3 ppm (maximum).

Caution: Federal (USA) law restricts this device to sale by, or on the order of, a physician.

Indications: ISPAN* Sulfur Hexafluoride (SF6) gas is a surgical aid for use in the treatment of uncomplicated retinal detachment by pneumatic retinopexy. It is used in the form of an intravitreal injection of selected retinal breaks and to aid in resorption of subretinal fluid. Associated measures used include transconjunctival and transcleral cryotherapy and laser photocoagulation.

Contraindications: Proliferative vitreoretinopathy (PVR) greater than Stage C, then mental or physical inability to maintain the therapeutic position for 5 postoperative days, severe glaucoma with more than a minimum of field loss and a cup to disc ratio equal to or greater than 0.6; uveitis; severe peripheral retinal degeneration; and high altitude travel, include but not limited to airline travel.

Warnings: Use of Nitrous Oxide (N2O) must be stopped at least 10 minutes before gas injection to ensure an adequate postoperative bubble is achieved. Do not administer Nitrous Oxide (N2O) if a gas bubble is present.

Do not use the ISPAN* gas if the cylinder pressure is below 50 psi as the expansion performance of the gas may change resulting in elevated intraocular pressure.

Precautions: Caution should be used in eyes with angle recession, pigment dispersion syndrome, significant anterior synechiae, traumatized eyes and eyes with significant vitreous hemorrhage obscuring an adequate view of the peripheral retina.

Attention: Reference the Physician Labeling/Directions for Use for a complete listing of adverse reactions, warnings and precautions.
