Balloon Inflation Device BID2 type

· This is a gun type of balloon inflation device which is a high pressure syringe barrel with ergonomic piston handle, and a gauge used to monitor the inflation and deflation of balloon catheters. It is intended to use with balloon inflation catheters to create and monitor pressure in the balloon and to deflate the balloon. The extension tubing is intended to connect balloon catheters and the balloon inflation device when additional tube length is required.

INQUIRY

FEATURES

- It is a tool used in PCI surgery, and the clinical use is large (For example, there were around 1.2 million PCI surgeries in China in 2022);

- Easy to inflate even at high temperatures;
- Pressure is released quickly;
- The modified humanized design fits comfortably when operation;
- Our featured **balloon inflation device with 40 Bar** - mainly for some special balloons, requiring varicose veins of the lower extremities or varicose veins of the radial artery.
