Closed Needleless Connectors & Accessories

bionector®
Product Range

bionector® is a needleless connector that allows medication and infusate to be administered via the patient's vascular access device without the need for a needle. Bionector can be used to infuse, inject and sample blood via the connection of a syringe, or standard infusion or administration set.

octopus® with bionector®

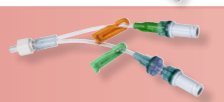

bionector®

octopus® with **bionector®** allows the administration of multiple simultaneous infusions through a single vascular access device or via one lumen of a multi-lumen vascular access device.

Suggested use of **octopus®** with **bionector®** 5222.014 and 841.264 with peripheral intra-venous catheters to reduce the risk of cannula movement in the vein causing mechanical vein irritation.

Use **octopus®** with **bionector®** 841.232 with peripheral intra-venous catheters to prevent the risk of backtracking during injections or infusions (e.g. insulin, morphine...)

Suggested use of codes 842.209, 842.306, 842.311, 842.414 and 842.514 in ICU when one lumen is required for central venous pressure and/or blood samples.
