desderman care

Virucidal activity of desderman care according to the quantitative suspension test EN 14476 (2013 +A2 : 2019)

EXPERT OPINION

The testing of the product **desderman care** of the company Schülke & Mayr GmbH was carried out according to EN 14476. The test was done with the test virus **Poliovirus Type 1** at clean conditions (test report PB 2019-1891, SN 28108 of 2019-10-16).

After an exposure time of **30sec** under **clean conditions** with the **97%** disinfectant **desderman care** the required virus titer reduction of $\geq 4\lg$ of Poliovirus Type 1 could be detected in cultures of HeLa cells.

Therefore, a virucidal activity of the **97%** product **desderman care** according to EN 14476 against Poliovirus Type 1 can be confirmed after **30sec** under **clean conditions**.
