

4000 LT SEWAGE TANK TIPPER BODY

Wastewater/residual water suction/pumping truck, 2 units.

1. Tank:

1.1. Loading capacity - at least; 4000 liters;

1.2. Material - carbon steel, with a thickness of at least 6mm;

1.3. Reinforced on the perimeter;

1.4. Breakwater type walls inside the tank;

1.5. Rear door - vertical opening by means of at least one hydraulic cylinder, hinged at the top, rubber gasket to ensure sealing.

1.6. Gutter with lateral wings to prevent leakage of wastewater/sludge.

2. Minimum tank equipment:

2.1 Tank level indicators;

2.2 Vacuum pressure gauge;

2.3 Non-return valve and overpressure;

2.4 Suction valve with quick connection;

2.5 Discharge valve with quick connection;

2.6 Liquid-air separator and protective filter;

2.7 Automatic shutdown when the tank is full (overflow safety valve).

3. Vacuum pump:

3.1 Powered by the hydraulic motor, connected to a hydraulic pump from the truck's power take-off.

3.2 Flow rate - at least 390 m³/h, maximum vacuum at least 90%.

4. Hydraulic system for tipping the tank and emptying the contents.

5. Control and command panel - at the rear of the tank.

6. Vacuum and pressure resistant suction hose - 4 pieces of at least 4m, with a diameter of 4" (101.6 mm) with connecting fittings between the hoses.

7. Side support - for storing and transporting the hoses.

8. Tool box/box with keys, including jack.

9. Built-in console for spare wheel with wheel included.

10. Welded tank according to EN ISO 3834

11. Anti-corrosion treatment according to ISO 12944.

12. Vacuum test certificate and leak test.

13. With European type approval (WVTA), according to Regulation (EU) 2018/858, accompanied by Certificate of Conformity.

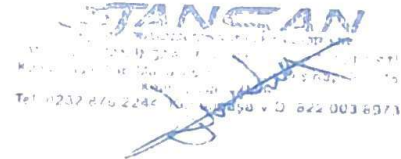

14. CE Certificate of Conformity.

22. Declaration of Conformity.

23. Vehicle operation manual and hydraulic and pneumatic diagram, in Romanian.

24. Technical condition - new and unused, year of manufacture 2026.

25. To have an ISO 9001 certificate from the manufacturer of the offered equipment
