

VISIO 4000 WALL TRANSFORMER

The VISIO 4000 Wall Transformer is the perfect solution for hectic everyday clinical and hospital life. The unit has a centralized electrical supply, eliminating the need for conventional and rechargeable batteries.

FEATURES:

- Basic Unit equipped with 2 handles. Each handle fitted with a VISIO 2000 Otoscope and VISIO 2000 Ophthalmoscope.
- The unit provides a constant 3.5V output voltage independent of mains voltage function. This ensures the right amount of light for each examination.
- Automatic On/Off switching of the handles. The instrument turns off automatically once the handle is placed in the cradle.
- Soft start avoids current surge during switch-on phase, protecting bulbs from damage.
- Non-Slip, ergonomic handle design.
- Handle equipped with a brightness control mechanism for variable regulation of light.
- Spiral cable enables a working radius of 3 meters.

Description	Ref (3.5V)
