Balloon Inflation Device

With Push Pull Y-connector Set
BID6004-Technical Data

Ares Balloon Inflation Device is an **essential instrument** for balloon dilation procedures.

Successfully designed, our Ares Balloon Inflation Device is intended to inflate the balloon with the desired fluid, monitor the pressure during the procedure and deflate the balloon when procedure is completed.

Remarkably ergonomic design of Ares Balloon Inflation Device assures **easy manipulation** from beginning to end. The rotating handle is particular for **comfortable grip and handling**.

Available with a **secure system**, Ares Balloon Inflation Device offers **one step locking and unlocking mechanism** and facilitates to the overall success of the procedure.

Display: Analog

Dial Range: 0-30 ATM (0-400 PSI)

Accuracy: FS \pm 1.6%

Stopcock: 3-Way 500 PSI

Extension Tubing: 25 cm Braided with Male Rotating Luer

Barrel Volume: 30 mL

Y-Connector: Push-Pull Type

Inner Lumen: 9F

Insertion Tool: Blunt Tip - 18G 10 cm

Torquer: For guidewires 0.010" (0.26 mm) to 0.025" (0.63 mm)

The **crystal clear barrel** ensure **perfect visibility** of the fluid allowing the user to observe the volume and content. The **30 mL barrel** is suitable for **fast and easy inflation and deflation** even for balloons with bigger volume.

Thanks to the ergonomic rotating handle, **high pressures (up to 30 atm)** are achievable with only **3 rotations** of the handle.

With its **easy-to-handle push and pull head**, the y-connector ensures perfect hemostasis. The **large lumen** allows effective insertion of devices while the accessories, **torquer and insertion tool** serves as perfect helpers to manipulate.
