

S-Guide

Malleable Intubating Guide for Difficult Airway Management

The S-Guide is an intubation aid for difficult airway management and facilitates orotracheal intubation, especially in patients where visualisation of the glottis is inadequate.

Due to its **malleability**, it is suitable for direct and indirect laryngoscopy, in particular for video laryngoscopes with non channelled blades.

Supplied with two types of G₂ Connectors, **oxygenation*** is possible throughout the whole intubating process, not impairing oxygenation even when the S-Guide is bent. For patient safety, the S-Guide is provided with a coloured, preformed and atraumatic **soft tip**.

* Oxygenation is possible with the size 10Fr and 15Fr. Oxygenation is not possible with the size 8Fr.
