BeneFusion 5 series are the powerful partners for intravenous infusion that are designed with the concept of SAFE infusion.

The SAFE concept stands for Smart system, Accurate infusion, Friendly design, and Easy connection. The concept comes with a set of state-of-the-art technology to provide considerate solutions for different clinical scenarios, as well as ensuring patients' safety.

# Smart System

#### Fast Start

The first drop can be delivered in just 2 to 3 seconds, leading to a timely infusion therapy.

### Intelligent Occlusion Management

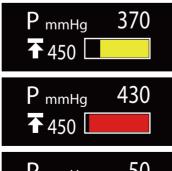

#### Dynamic Pressure System (DPS)

- A wide range of occlusion detection to increase safety levels
- Graphical and numerical pressure indicators to predict occlusion alarm in advance.

#### Anti-bolus

Unexpected bolus reduced when the occlusion occurs, releasing the high pressure to protect patients.

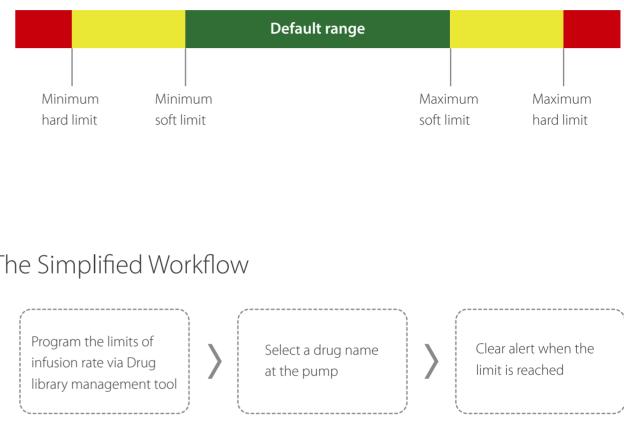

### Dose Error Reduction System (DERS)

The DERS drug library assists in protecting patients by triggering the alarms when the actual dose reaches defined limits, ensuring patient safety.

### The Simplified Workflow

#### Smart Pump Interfaces

Colour-coded drug names

Coloured dose rate displayed when the soft limit is reached

#### 🗟 🖬 Body Weight Mode

Dose Rate has reached upper hard limit of 150 ug/kg/h

<u>چ</u>

#### < Setting

Considerate reminders displayed when the hard limit is reached

## **Accurate Infusion**

#### Consistent and precise performance

- Real-time high stability of infusions guaranteed by the overall mechanical accuracy
- High accuracy over long hours guaranteed by the compensatory algorithm to deformed IV sets

Both of them are achieved throughout the entire infusion process, avoiding unexpected harmfulness to patients.

#### Dedicated IV administration set

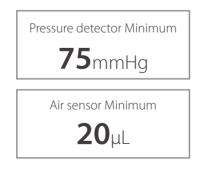

- Latex-free and DEHP-free dedicated lines
- Various types for satisfying different clinical needs
- Extraordinary infusion accuracy guaranteed

#### High accuracy detection sensors

Assist in identifying risks caused by occlusion and air bubbles, ensuring a safe infusion.

### A broad range of syringe compatibility

Compatible with syringes that range from 2ml to 60ml, contributing to great accuracy in general.

# Friendly Design

#### Quick Guide

On-screen instructions provides useful information to help avoid any improper operation.

### Graphical Alarm Display

Easy to identify any specific issue, helping to eliminate problems in time.

#### Volume Collection

Versatile enough to better collect the volume of infusions for different clinical scenarios, alleviating nursing workloads.

# 

Total		ş
24h Total		555.8 ml
Current total	3 h	108.6 ml
Time	10:25 - 11:40	48.4 ml
Timing volume		
ок Confirm		S Back

#### The Portable Handle

VP5/SP5 can be equipped with a portable handle (BeneFusion PH5) for convenient transfer.

### DS5 Docking Station

DS5 optimizes beside infusion management with one-power-cord design, integrated monitoring, flexible combination, as well as multi-channel function.

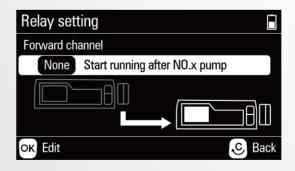

One power cord Leads to a worry-free bedside management

Ē	1 Li	Qin 🛉	🔉 🛔 📄
3	2 min	Dobutamine	.C#
1	injecting	Glucose	Û
2	injecting	Amino Acid	Û
4	injecting	Dopamine	ß
5	injecting	Midazolam	ß
Tota	l volume	53.93	ml

Integrated monitoring

Presents key information of multiple pumps

Automatic multi-channel relay Smooth drug-giving enable continuous infusions

Flexible combination

2 to 24 slots available for combining VP5 and SP5 in any order

DS5 Basic

A simplified version of DS5 that provides a cost-effective solution without integrated monitoring

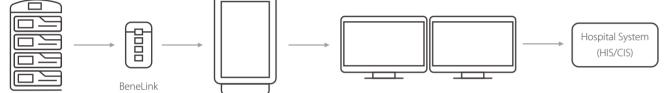

# **Easy Connection**

#### Integration and Synergy

DS5

- Vital information from infusions, including drug name, rate and accumulated volume can be synchronized and shown on BeneVision N series patient monitor.
- Drug-related physiological parameters, such as HR, BP, RESP, BIS and so on, to provide a comprehensive picture for medical staff to diagnose and prescribe the patient.

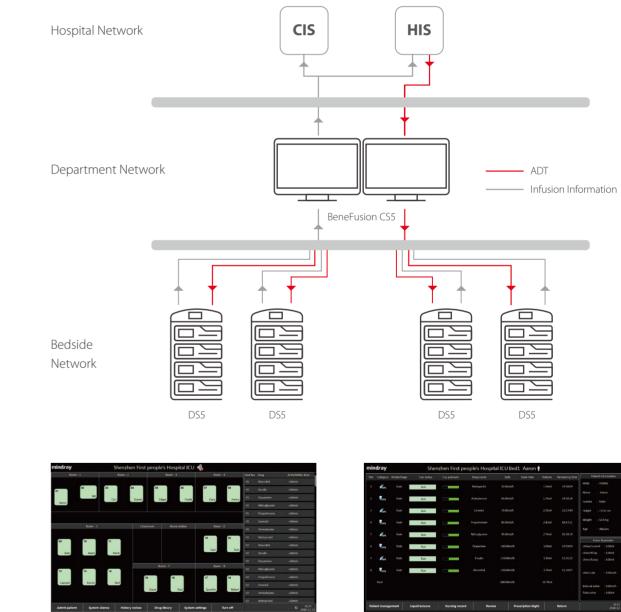

N series patient monitor

#### Centralized Management

- Great capability to supervise up to 64 DS5 or 512 BeneFusion pumps simultaneously.
- Digital network with centralized management of infusion data, which greatly increases work efficiency and alleviates workloads.
- HL7 protocol allows BeneFusion pumps to be integrated into the hospital network, such as CIS, HIS and so on, which assists the hospital to implement a paperless environment.
