

# Finecross™ MG

## Coronary Micro-Guide Cathether

On this page: [Description](#) [Characteristics](#) [Preparation](#) [General specifications](#) [Item specifications](#)

### Description

#### Designed for success in complex procedures

FineCross™ MG microcatheter integrates crossability and guidewire support to treat challenging cases, involving tortuous vessels, CTO, bifurcations, highly stenosed and calcified lesions.

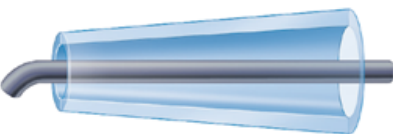

### Characteristics

#### Conventional microcatheter

#### Finecross® MG

Tapers from 2.6 Fr to 1.8 Fr over entire catheter length

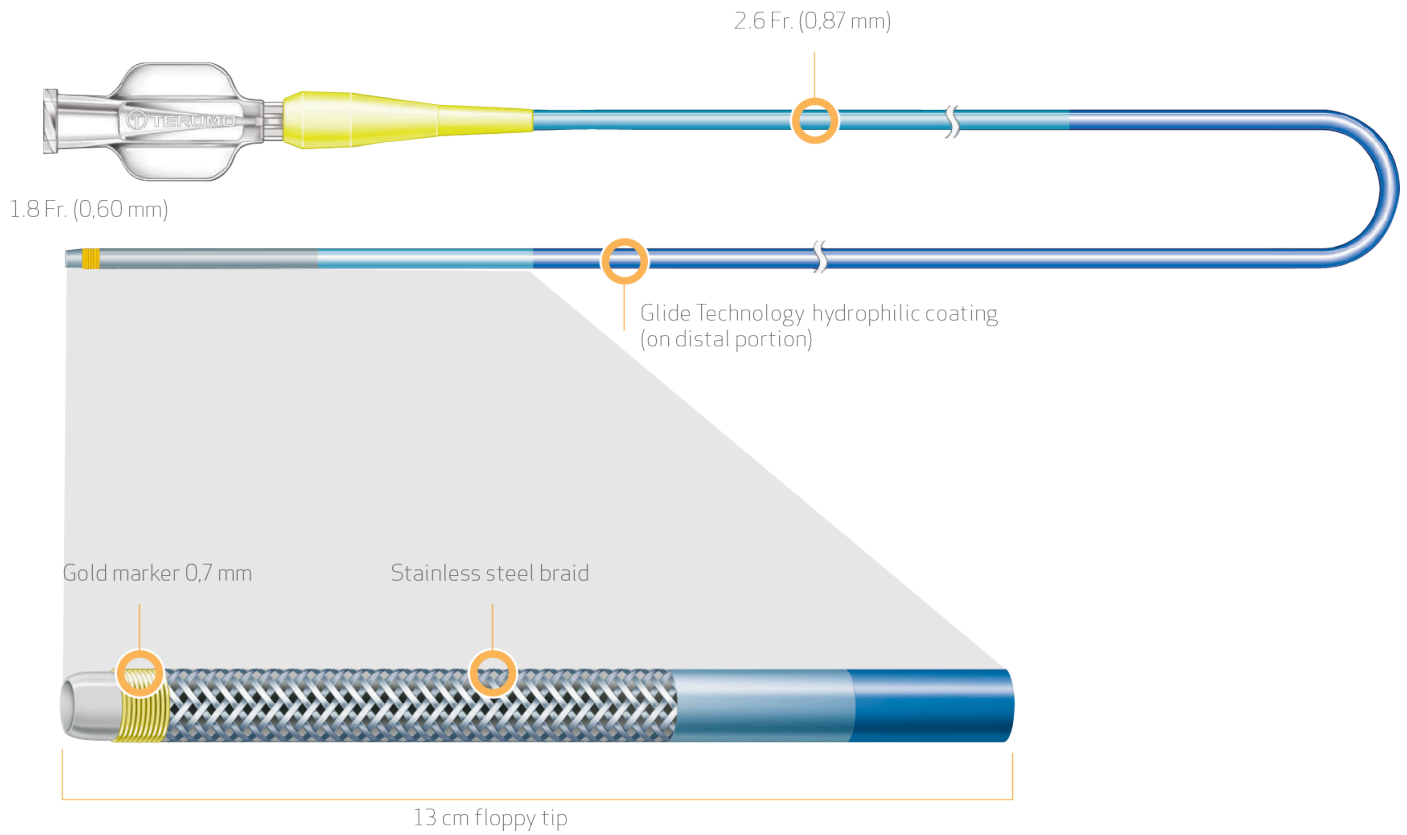

**Crossability**

- Hydrophilic coating and flexible distal segment to enable advancement and access through distal tortuous vessels.
- Tapered inner and outer diameters, from 2.6Fr to 1.8 Fr over the entire length.

**Guidewire support**

- Fully stainless-steel braided shaft for responsiveness, lumen integrity, and pushability
- PTFE inner layer for guidewire handling to facilitate exchange wire during complex procedures.

## Preparation

Video instructions

## General specifications

Shaft coating	Hydrophilic coating
Braiding	Stainless steel - SUS
Inner layer	Polytetrafluoroethylene - PTFE
Radiopaque marker	0.7 mm gold marker located at 0.6 mm from the tip
Usable length	130 or 150 cm
